Man GLG Global Emerging Markets Local Currency Rates Class I H EUR Net-Dist A Shares

(ISIN:IE00BDHF1S36) Man GLG Global Emerging Markets Local Currency Rates (the 'Fund') is a sub-fund of Man Funds plc (the 'Company').

Man Asset Management (Ireland) Limited, part of Man Group plc, is the Manager of the Company.

Objectives and investment policy

- The Fund aims to achieve a return over the long term primarily through investment in fixed income securities (eg bonds) denominated in the local currencies of various emerging markets.
- The fixed income securities invested in may be issued or guaranteed by companies in emerging markets or which provide exposure to emerging markets. They may also be issued by governments, government agencies or supranational bodies in emerging markets. The securities may be listed or traded on developed markets and/or the issuers may be developed market issuers providing emerging markets exposure. The fixed income securities are not subject to minimum rating requirements.
- The Fund will not have a specific exposure in terms of industry, sector, market or capitalisation.
- The Fund typically aims to create returns through a long exposure (ie, it will benefit from an increase in the value of assets to which it obtains exposure). However, it may seek to apply a 'long-short strategy' whereby, in addition to buying and holding assets, it may use derivatives (ie instruments whose prices are dependent on one or more underlying asset ('FDI') to take 'short' positions whereby the Fund may make money in respect of issuers whose securities the Fund believes to be overvalued or expects to fall in value.
- The Portfolio's investment, directly, or indirectly through the use of derivatives, in fixed-income securities listed or traded on Recognised Markets in Russia shall not exceed 20% of the Net Asset Value of the Portfolio. The Fund may actively use FDI to achieve the investment objective, for hedging against anticipated movements in a market or a security, or where it is more economically effective than directly holding the underlying asset. For example, the Fund may use a combination of FDI to replicate the exposure which would be obtained by directly holding emerging market bonds.
- Benchmarks. The Fund is actively managed. The Fund does not intend to track the JP Morgan GBI-EM Global Diversified Composite and is not constrained by it. The Benchmark is being used by the Fund for risk management purposes. The investment manager will manage global exposure of the Fund to within 200% of the Benchmark's value-at-risk ("VaR")*. The risk management function of the Investment Manager will perform additional monitoring of positions in the fund relative to weights in the benchmark. While the Fund will focus on individual issuers that may or may not belong to the Benchmark, such investment may be in different weights. The above factors may influence the extent to which the Portfolio deviates from the Benchmark. The Benchmark is also used for performance comparison purposes. * The VaR of a portfolio is a daily estimation of the maximum loss which a fund may incur over a 1 day period.
- The Investment Adviser may seek to incorporate non-financial factors and sustainability themes in the investment decision-making process. This may lead the Investment Adviser to exclude particular assets, and to apply environmental, social and governance ('ESG') factor screening.
- The Fund may retain a significant proportion of its portfolio in cash and/or invest a significant proportion of the portfolio in liquid assets (ie securities that can be quickly and easily turned into cash). In addition, the Fund may trade in global currencies.
- The Fund will use FDI to provide investors with a similar return to any share class issued in the working currency of the Fund (USD).
- Income generated by the Fund will be distributed to investors who have elected for distribution payments and investors can buy and sell their shares on each Dealing Day of the Fund.
- Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

Risk and reward profile

Lower risk ← Higher risk
Typically lower rewards → Typically higher rewards

- The lowest category does not mean 'risk free'.
- The risk and reward profile is not guaranteed and may change over time.
- Historical data may not be a reliable indication for the future.
- The risk category for this share class is 4 as funds of this nature engage in strategies that typically have a moderate volatility. The calculation is based on the historical volatility of the Fund's performance. Where there is insufficient Fund performance the calculation is based on either the historical volatility of a relevant benchmark for the investment strategy or the Manager's Value at Risk limit for the Fund. Please refer to the prospectus for further information relating to the Value at Risk.

The following risks may not be fully captured by the risk and reward profile:

- The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.
- The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options

and where applicable, 'over-the-counter' ("OTC", "non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.

- The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets.
- Liquidity characteristics of non-exchange listed investments can be irregular, and may result in higher than anticipated costs to liquidate the position.
- The Fund will invest FDI to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.
- The Fund's use of FDI may result in increased leverage which may lead to significant losses.
- The Fund may invest in non-investment grade securities which are considered higher risk investments that may cause income and principal losses for the Fund.
- The currency hedging used for this share class to minimise the effect of certain exchange rate fluctuations may not be completely successful.
- The value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.
- There is no guarantee that the Fund will achieve its investment objective.

A complete description of risks is set out in the prospectus section entitled 'Certain Investment Risks'.
