## ESG Metrics Definition

The ESG absolute rating is based on a proprietary scoring methodology. If the fund has one tree (5 trees), it means that it is in the lowest (highest) ESG absolute rating category.

For more information on the methodology, please visit <https://www.axa-im.com/responsible-investing>.

ESG relative rating is calculated as the difference between the ESG absolute rating of the portfolio and the ESG absolute rating of its benchmark. If ESG Relative rating is positive (negative), this means that the portfolio has a higher (lower) ESG absolute rating than the benchmark.

CO2 relative intensity is calculated as the difference between the CO2 intensity of the fund (expressed in tCO2/M€ Revenues) and the one of the benchmark.

If CO2 Relative intensity is green, it means that the intensity of the portfolio is lower than that of the benchmark. If CO2 Relative intensity is orange, it means that the intensity of the portfolio is higher than that of the benchmark. If CO2 Relative intensity is yellow, it means that the intensity of the portfolio is similar than that of the benchmark.
