

Allianz Selective Global High Income - AT (H2-EUR) - EUR

Fund for global high-yield bonds aiming at limiting volatility

Allianz 
Global Investors

Investment Objective

The fund concentrates on global bonds with a credit rating of at least BB- (Standard & Poor's classification) and has a specific focus on GHG emissions intensity to contribute to shaping a lower carbon economy/society. The average rating of the portfolio assets shall not be below BB-. The proportion of asset-backed securities/mortgage-backed securities (ABS/MBS) may not exceed 20 %. Non-USD currency exposure exceeding 10 % of fund assets needs to be hedged. The investment objective is to attain long-term capital appreciation and to generate income in combination with an expected volatility between investment grade and high yield.

Fund Manager

David Newman
(since 10/31/2016)

Opportunities

- + Particular return potential of high-yielding bonds
- + Capital gains opportunities on declining market yields
- + Prospect for relative stability through focus on the upper non-investment grade segment
- + Currency gains against investor currency possible
- + Broad diversification across numerous securities
- + Focus on sustainable investments
- + Potential additional returns from security analysis and active management

Risks

- High-yielding bonds entail above-average risk of volatility, illiquid markets and capital loss. The fund unit price may be subject to sharply increased volatility.
- Bonds suffer price declines on rising interest rates
- Focus on the upper non-investment grade segment does not rule out price fluctuations
- Currency losses against investor currency possible
- Limited participation in the potential of individual securities
- Sustainability approach narrows the investment universe
- No guarantee that single security analysis and active management will be successful

FOR FUND DISTRIBUTORS AND PROFESSIONAL INVESTORS ONLY

- 1) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. **Any front-end loads reduce the capital employed and the performance.**
- 2) Benchmark history: until 31/10/2022 ICE BOFAML GLOBAL HIGH YIELD BB-B RATED (HW40) HEDGED IN EUR, until 30/08/2022 SOFR (hedged into EUR), until 09/08/2021 ICE BOFAML Global Broad Market Corporate (hedged into EUR), until 28/11/2019 no Benchmark (EUR)
- 3) SFDR: EU Sustainable Finance Disclosure Regulation. Information accurate at time of publishing.
- 4) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 5) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 6) This is for guidance only and not indicative of future allocation.
- 7) Breakdown based on best available rating for each security. Data published by index provider may differ due to different calculation methodologies.
- 8) If the acquisition of Fund units is subject to a sales charge, up to 100% of such sales charge may be collected by the distributor; the exact amount shall be mentioned by the distributor as part of the investment advisory process. This also applies to any payment by the Management Company of an ongoing distribution fee from the all-in fee to the distributor. The all-in fee includes the expenses previously called management, administration and distribution fees.
- 9) TER generally: Total cost (except transaction costs) charged to the fund during the last financial year. TER for funds-of-funds: The costs incurred by the fund itself (except transaction costs). Since the fund held other investment units ("target funds") in the reporting period, further costs, charges and fees may have been incurred at the level of the target fund.
- 10) Represents the lowest potential yield that an investor could theoretically receive on the bond up to maturity if bought at the current price (excluding the default case of the issuer). The yield to worst is determined by making worst-case scenario assumptions, calculating the returns that would be received if worst-case scenario provisions, including prepayment, call or sinking fund, are used by the issuer (excluding the default case). It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. Calculation is before currency hedging. The yield to worst is a portfolio characteristic; in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to worst is not suitable as an indicator of the future performance of a bond fund. Forecasts are not a reliable indicator of future results.

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz Selective Global High Income is a sub-fund of Allianz Global Investors Fund SICAV, an open-ended investment company with variable share capital organised under the laws of Luxembourg. The value of the units/shares which belong to the Unit/Share Classes of the Sub-Fund that are not denominated in the base currency may be subject to an increased volatility. The volatility of other Unit/Share Classes may be different and possibly higher. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
