STRATEGY

The information displayed above reflects the underlying holdings of the Fund. Investors will acquire shares in the Fund. The goal of the Pzena Global Value Fund is to achieve long term alpha generation. Pzena actively manages the Fund and to this end, Pzena employs a classic value investment philosophy, seeking to own good businesses at low prices. The investment team at Pzena focuses on companies that are underperforming their historically demonstrated earnings power. Intensive fundamental research is applied to these companies in an effort to determine whether the problems that caused the earnings shortfall are temporary or permanent. After the research process is complete and the company meets all the investment criteria, the Fund's portfolio managers may agree to add the name to the portfolio; their decision must be unanimous. Our sell discipline is guided by the same ranking system that informs stock purchases. We continuously monitor every position's valuation rank (based upon the company's current stock price relative to normalized earnings) within its investment universe. Generally we sell a stock once it reaches the midpoint of its investment universe; however, we may hold a security below this point in order to maintain a desired level of diversification.

Past performance is not indicative of future results. The value of your investment may go down as well as up, and you may not receive upon redemption the full amount of your original investment. Investments may be in a variety of currencies and therefore changes in rates of exchange between currencies may cause the value of investments to decrease or increase.

All investments involve risk, including loss of principal. Investments may be in a variety of currencies and therefore changes in rates of exchange between currencies may cause the value of investments to decrease or increase. The price of equity securities may rise or fall because of economic or political changes or changes in a company's financial condition, sometimes rapidly or unpredictably. Investments in foreign securities involve political, economic and currency risks, greater volatility and differences in accounting methods. These risks are greater for investments in Emerging Markets. PIM's strategies emphasize a "value" style of investing, which targets undervalued companies with characteristics for improved valuations. This style of investing is subject to the risk that the valuations never improve or that returns on "value" securities may not move in tandem with the returns on other styles of investing or the stock market in general.

Fund returns are benchmarked to the MSCI World Index – Net W/H (the "Benchmark"). The Benchmark is used for comparative purposes only. The MSCI World Index captures large and mid-cap representation across 23 Developed Markets countries. The Benchmark covers approximately 85% of the free float-adjusted market capitalization in each country. The Benchmark cannot be invested in directly. The performance of the Benchmark reflects the reinvestment of dividends net of withholding tax rates. The Fund's performance reflects the deduction of all Fund fees and expenses and reflects reinvested dividends (different share classes may vary). The Fund is significantly more concentrated in its holdings and has different sector and regional weights than the Benchmark. Accordingly, the performance of the Fund will be different from, and at times more volatile, than that of the Benchmark.
