

### SEXTANT BOND PICKING

The fund's quarterly performance was 8.4% and its benchmark was -0.2%.

Sextant Bond Picking is an international bond fund that implements a « value/fundamental » type management policy:

- focus on managing the credit risk (return versus cost of risk);
- credit analysis of issuers is done internally, so we do not depend on the credit-rating agencies;
- as far as possible, we avoid macroeconomic bets on interest rates (preferring low or moderate sensitivities) and currencies (most forex risks are hedged);
- we place no limits on our investment universe, and are thus free to invest in the least efficient market segments: unrated paper, out-of-the-money convertibles, bonds not denominated in the issuer's domestic currency, complex paper and/or sectors etc.

On an ancillary basis, the fund may also invest in equities (maximum 10%), mainly arbitrages on capital market deals or companies that pay a high dividend.

#### Market situation

In Q4, high-yield credit margins fell sharply to around 300bps on 31 December. They were thus similar to the level of January 2020.

Returns on high-yield credit indices are now close to the pre-crisis levels of last spring, as the public health and economic situation has entailed major risks for the credit profile of bond issuers.

Estimates for the default rate of high-yield issuers range from 3 to 12% according to the banks and rating agencies.

Market vigour is also reflected in the rates on primary issues in the credit market, which offer only a thin safety margin. For example, Alstom issued an 8Y bond yielding only 0.13%. The high-yield debt segment is offering yields that are close to all-time lows: Bloomberg Barclays Pan-European High Yield (Euro) was yielding just 2.83% at the time this report was written.

#### Structure of the portfolio

The portfolio's cash holdings were rebuilt gradually in Q4, rising from 16.3% of assets at end September to 20.4% on 31 December. Reduced returns in the high-yield segment prompted us to divest holdings that had reached our objectives in terms of price target and yield. At the same time, some existing positions were strengthened in response to market trends, to take advantage of risk/reward profiles that we considered attractive.

At end December, the fund's yield (after forex hedging for the part invested in bonds) was 4.9% versus 6.2% on 30 September. Sensitivity to the interest-rate risk eased to 2.0. As a result, for the overall fund including cash holdings, the yield after forex hedging was 3.5% vs 4.8% on 30 September, for sensitivity of 1.5. Sensitivity of the fund to equity markets (delta) decreased to 8% from 9.4% on 30 September, mainly due to the part invested

in equities (5.1% of the portfolio invested, versus a maximum of 10% authorised).

#### Main transactions

In November, the Bloomberg Barclays EUR High Yield index (excluding financials) was up roughly 4% for the month. The portfolio generally benefited from the market trend in Q4, and we made some divestments as yield targets for a given credit risk were achieved. Several positions were divested in Q4 as prices rose. Most notably, the **EasyJet 2023** bond whose yield fell from 7% at end September to only 2% in mid-December as the price rose. Similarly, we sold our positions in **Elis**, **Dometic** and **Telecom Italia**.

We strengthened our position in the **Quadiant June 2022** perpetual convertible bond, as the appeal of the credit profile has been underpinned by an improvement in the operating profile. Clever management of a shrinking postal business as well as recurring new activities (notably parcel lockers for delivery of internet purchases) have helped to restore the issuer's profile. The bonds rose in response to an unsolicited bid from an investment fund for part of the group, thus compressing the yield. The latter remains attractive as the bond is approaching maturity (early redemption option in 2022) and in view of the credit profile.

Our position in **Solocal** shares, which we received as a result of restructuring of debt that represented more than half of our notional debt, was almost entirely divested in Q4. In view of the average acquisition price of the debt, coupons, commission received during the restructuring and the average sale price, the transaction generated a profit for the portfolio.

Lastly, the fourth quarter saw the redemption at maturity of our position in **Eramet** in November.

#### Outlook

The default rate for euro-denominated high-yield bonds was around 4% in 2020, which was not particularly high given the difficult situation that many sectors of the economy faced. Government support in the form of short-time work and loan guarantees helped to hold down the default rate. Expectations for 2021 range from 3% to 12%, according to the banks and rating agencies. With the average yield around 3%, there is a clear need to be discriminating in order to find the most coherent risk-reward profiles.

As a result of arbitrages in November and December, the fund begins 2021 with cash holdings that amount to c.20% of asset value. Credit spreads are slightly higher than in early 2020, but the economic environment has deteriorated significantly. High cash holdings reflect our cautious stance and will allow us either to seize idiosyncratic opportunities or to take advantage of more attractive market conditions - as we did in first-half 2020.
