Risk and reward profile

This indicator represents the annual historical volatility of the Fund over a 5-year period.

The risk category has been calculated based upon the historical returns of the Fund's benchmark, which may not be a reliable indication of the Fund's future risk profile. The risk category shown is not guaranteed and may change over time. The lowest category (category 1) does not mean that the investment is risk free.

The Fund is rated 5 due to the nature of its investments which include the following risks :

Equity risk: the value of equities and equity-related securities can be affected by daily stock market movements.

Derivatives: these are financial instruments which derive value from an underlying asset and the Fund may use derivatives for investment purposes. Whilst this is not intended to cause larger, more frequent changes in the Fund price or increase its risk profile, derivatives are inherently volatile and the Fund may be exposed to additional risks and costs as a result.

Currency risk: the risk that changes in exchange rates between currencies or the conversion from one currency to another may cause the value of investments in the Fund to diminish or increase.

Leverage risk: the Fund uses leverage through financial derivative instruments to gain additional exposure to volatility, which may multiply losses if volatility increases.

Your initial investment is not guaranteed and its value can go down as well as up.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Liquidity risk: lack of marketability of a significant level of investment, i.e. securities which cannot be traded quickly enough to prevent or minimise loss.

Counterparty risk: the risk to each party of a contract that the counterparty will not live up to its contractual obligations.

For more information about risks, please refer to the “Risk Factors” section of the prospectus, which is available at www.iaminvestments.com.
