

Eurizon Fund - SLJ Local Emerging Markets Debt Z, EUR Accumulation

Data as of 03/31/2024

This Sub-Fund is managed by Eurizon Capital S.A.

NAV (in EUR)	101.52	Fund Size (in EUR)	634 mil	Number of Holdings	77
Morningstar Rating TM	★★	Fund Manager	Eurizon SLJ Capital Limited		
Morningstar Rating TM referred to	02/29/2024				
Class Unit Inception Date	04/11/2017				

Investment / Performance Objectives & policy

The fund mainly invests, either directly or through derivatives, in government bonds issued in emerging markets, including China and Russia, and denominated in any local currency. These investments may be below investment grade and some of them may be highly speculative. The fund generally favours direct investment but may at times invest through derivatives. Specifically, the fund normally invests at least 70% of total net assets in debt and debt-related instruments from issuers that are located, or do most of their business, in emerging markets, including money market instruments. The fund may invest directly, or indirectly through the Bond Connect programme, in the China Interbank Bond Market. The fund may invest in the following asset classes up to the percentages of total net assets indicated:

- below investment grade debt instruments rated CCC+/Caa1 or lower or unrated: 30%, including 10% in distressed debt securities
- emerging market debt instruments denominated in hard currencies: 30%
- asset-backed securities, including asset-backed sukuk bonds: 10%
- contingent convertible bonds (coco bonds): 10%

The fund may use derivatives for reducing risks (hedging) and costs, and to gain additional investment exposure.

For more information read the Prospectus or Key Information Document (KID).

The returns calculations do not take into account taxes applicable to an average professional client in his or her country of residence. When the currency presented differs from yours, there is a currency risk that may result in a decrease in value.

Risk and Reward Profile

The risk indicator assumes you keep the product for 4 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity to pay you.

For any further details on investment risks, please refer in particular to the Risks section of the Fund's Prospectus.

Portfolio Characteristics

	Portfolio
Weighted Average Coupon	5.91%
Current Yield	6.32%
Average Rating	BBB
Yield to Worst*	6.57%

The portfolio Yield to Worst refers only to the component of fixed income and is calculated as a weighted average of returns of the single bond instruments, where the weighting takes place with respect to the value of the individual instrument. Returns hold account of the operating probabilities of the optional components possibly present in the bonds.

Eurizon Fund - SLJ Local Emerging Markets Debt Z, EUR Accumulation

Data as of 03/31/2024

Sustainability characteristics

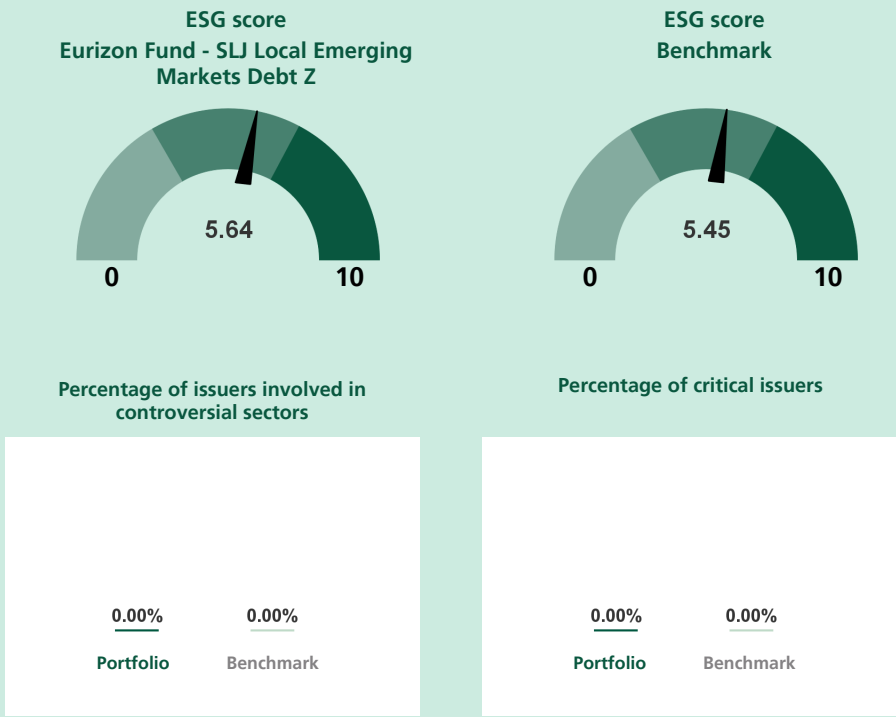

ESG score

The ESG score considers environmental, social and governance factors based on data on the individual issuer provided by MSCI ESG, which are then aggregated according to the underlying securities in the portfolio. The same methodology is also applied to the product benchmark.

SFDR Category

Article 8

The fund is qualified pursuant to Article 8 of Regulation (EU) 2019/2088; see the Sustainability Report for more details.

Values other than zero may be due to (i) discontinued issuers, in the best interest of participants and in accordance with current legislation, (ii) issuers for which an engagement activity is in progress or (iii) indirect exposures.

Source: Internal processing of data provided by MSCI ESG Research
Survey period: 12-month rolling average

Appendix

Percentage of issuers involved in controversial sectors

Issuers operating in sectors deemed controversial (not “socially responsible”), to which restrictions or exclusions apply with respect to the entirety of the individual assets under management, are companies (i) that have a clear direct involvement in the manufacture of unconventional weapons; (ii) at least 25% of whose turnover is generated from thermal coal mining or power generation activities; (iii) at least 10% of whose turnover is generated from the exploitation of oil sands.

More specifically, unconventional weapons are understood as: anti-personnel mines; cluster bombs; nuclear weapons*; impoverished uranium; biological weapons; chemical weapons; stealth cluster bombs; blinding lasers; incendiary weapons; white phosphorus.

These provisions do not apply to the activities permitted by the following treaties and/or conventions:

- The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines; the Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster bombs;
- The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons;
- The Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons;
- Regulation (EU) 2018/1542 concerning restrictive measures against the proliferation and use of chemical weapons;

These exclusions are also intended to comply with the requirements established by Law no. 220 of 9 December 2021 on measures to counter the financing of companies producing antipersonnel mines, cluster bombs and submunitions.

*With regard to exclusions on nuclear weapons, issuers based in states that have adhered to the “Nuclear Non-Proliferation Treaty” stipulated on 1 July 1968 are not considered.

Percentage of critical issuers

“Critical” issuers are those companies having a higher exposure to environmental, social and corporate governance risks, i.e. which have a lower ESG sustainability rating level (equal to “CCC” assigned by the specialized info-provider) in the equity and bond investment category and for which an escalation process has been activated, or is being assessed, which determines restrictions and/or exclusions with respect to the entirety of the individual assets under management (“ESG Binding screening”).

Percentage of issuers selected on the basis of positive and negative criteria

The weighting of issuers that comply with the specific positive and negative selection criteria identified by the Product, i.e. (i) issuers of green/sustainable bonds and (ii) companies publicly engaged in the energy transition process, particularly through the progressive reduction in Scope 1 and Scope 2 emissions to reach climate neutrality by 2050 (“Net Zero” goal).

Percentage of assets in government issuers meeting the screening criteria

The weight of government issuers that meet the selection criteria defined on the basis of the indicators of the “Sustainable Development Report” and Regulation (EU) 2019/2088 to monitor the principal adverse impacts relating to government issuers.

Percentage of assets in ESG or sustainable investment type UCIs

This is understood as assets of UCITS that promote environmental and/or social characteristics pursuant to Article 8 of Regulation 2019/2088 or which pursue sustainable investment objectives pursuant to Article 9 of said Regulation.

Carbon footprint

The value represents tonnes of carbon dioxide (direct - Scope 1 and indirect - Scope 2) of the investee companies in relation to their turnover.

Sustainable investment

Weighting (i) of issuers with net positive alignment with at least 1 of the United Nations’ 17 Sustainable Development Goals (SDG) and no misalignment with any of the SDGs and (ii) of green, social and sustainability bonds.

Data as of 03/31/2024

Investment Manager Commentary

Market Development

It was a challenging month for financial markets in March; as data surprised to the upside in the core-economies, market participants continued to wrestle with the timing and magnitude of the developed market easing cycle. In particular, Fed rate cuts were under the microscope as Non-Farm Payrolls, CPI and PPI printed above consensus expectations. Despite noise in the data, core-market policymakers stayed the course, with dovish signalling over the course of the month. The Fed meeting for March was the key risk event; in line with our view, the FOMC attributed recent data surprises to seasonality/one-off adjustments and the median dot was unchanged for 2024, which implies three rate cuts this year. Elsewhere this month, we note further dovish developments in the core; Bank of England (hawkish dissenters retracted votes), European Central Bank (first cut signalled for June) and the Swiss National Bank (unexpected 25bps cut). As a result, US treasury yields drifted lower and risk assets performed well. Despite the noisy month, emerging market local currency debt has once again shown remarkable resilience and volatility remains low; the asset class remains supported by the local easing cycle, the remaining carry cushion, and under-engaged investor positioning. Local: It was a positive month for our index (JP Morgan GBI-EM) closing +0.17% stronger. External: EM hard currency was strong in February; the composite index rallied +2.09%. EMFX: It was a positive month for currencies; the EMFX basket increased +0.06% vs the USD.

Performance and Investment Choices

Despite near-term uncertainties in the core-markets, we remain optimistic when it comes to EM. Longer term, EM is likely to be supported via central bank easing cycles, carry, and light positioning. As a result, we aim to maintain our OW duration allocation over the coming months. We continue to favor overweights in LATAM; over the month, we maintained our overweight position in Brazil & Mexico; supported by slowing inflation and dovish central banks. In CEE we remain neutral, a position we have held over recent months. In MEA, we remain neutral, having closed our South Africa overweight last month. Elsewhere in MEA, we maintained underweights in Turkey, which continues to suffer from structural imbalances. In ASIA, we maintained underweights in China & Thailand; we favor underweights in low volatility and low yielding markets. We maintained our overweight DM duration position as a protective allocation, via USTs. Underweights in Thailand and overweights in USTs contributed to fund performance. Overweights in Brazil and Mexico detracted from fund performance. While constructive EMFX, we remain cautious, while core-market central banks bring their tightening to a close. We maintained our JPY overweight; we have this position for tail risk hedging. Overweights in JPY detracted from fund performance.

Outlook and Investment Strategy

Looking forward, as emerging market investors, we are excited when it comes to 2024. We remain unconvinced by arguments for a “hard-landing” in global growth. These calls seem to brush over the facts; the global economy is still operating substantially below its historical potential, labour markets have been resilient to the sharp tightening cycle engendered by policymakers, and China could be quietly making a turn toward more growth friendly policies. Structurally, we anticipate a technology-led and rivalry-fuelled multi-year economic expansion led by the US and China. Emerging markets are uniquely placed to benefit from the spill over of this calibration. At the same time, there are endogenous EM growth stories, which adds to the tailwind from the global growth “beta. A view shared by the IMF WEO forecasts which maintain a robust growth premium in EM relative to DM, the next five years. The great inflation storm, which has buffeted the global economy over the last 18 months, has all but passed. As the clouds clear, we can see that global inflation is rapidly decelerating almost everywhere you look. As we move in 2024, we expect the easing cycle to continue within the emerging markets. Policymakers have the space to do so, having “out hiked” the Fed when the inflation shock first emerged 18 months ago; first in, first out. Crucially, the Fed is close to following suit; with CPI falling rapidly, the FOMC has quietly pivoted from its “higher for longer” mantra, with many individual members turning outright dovish and some even proposing the wind-down of QT. The ongoing emerging market rate cutting cycle, combined with the beginning of policy easing the core-markets is a potent combination for LCD.

IMPORTANT INFORMATION

Source of information and data related to the Unit of the Sub-Fund: Eurizon Capital SGR S.p.A, Società di gestione del risparmio, a public limited company (società per azioni) incorporated in Italy under number 15010 and having its registered office Via Melchiorre Gioia, 22 - 20124 Milan and authorized to act as investment manager under the supervision of CONSOB.

Morningstar Rating based on the Unit of this document. For more details about the methodology, please refer to the Glossary as well as the following link: https://www.morningstar.com/content/dam/marketing/shared/research/methodology/771945_Morningstar_Rating_for_Funds_Methodology.pdf. Morningstar The Morningstar rating is a quantitative assessment of past performance that takes into account risk and costs imputed. It does not take into account qualitative elements and is calculated on the basis of a (mathematical) formula. The classes are categorized and compared with similar UCITS classes, based on their score and they receive one to five stars. In each category, the top 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The rating is calculated monthly on the basis of historical performance over 3, 5 and 10 years and does not take into account the future.
