For Investors in the UK. Investors should read the Key Investor Information Document and Prospectus prior to investing.

FUND OVERVIEW

The Fund aims to achieve a positive absolute return through a combination of capital growth and income on your investment regardless of market conditions. The Fund will provide exposure to several investment styles including, (i) Value: focuses on investments that appear relatively cheap with the aim of outperformance relative to expensive assets; (ii) Momentum: focuses on investments with relatively strong medium term performance with the aim of benefitting from an asset's recent relative performance continuing in the short term; (iii) Carry: focuses on higher-yielding investments with the aim of benefitting from the higher returns of these assets relative to lower-yielding assets; and (iv) Defensive: focuses on investments with low-risk characteristics with the aim of benefitting from the tendency for lower risk, higher quality assets to generate higher risk-adjusted returns than higher risk, lower quality assets. The Fund will invest on a global basis in any or all of the following asset classes: equity securities (e.g. shares), other equity-related securities, fixed income securities (e.g. bonds), other fixed-income related securities, permitted money market instruments (e.g. debt instruments with short-term maturities), mortgage backed securities (MBS) (i.e. financial securities backed by cash flows from debt), permitted deposits, cash and other funds

RATINGS

Key Risks Continued: All financial investments involve an element of risk. These securities have similar characteristics to corporate bonds but carry greater risk as the details of the underlying loans is unknown, although loans with similar terms are typically packaged together. The stability of returns from ABS are not only dependent on changes in interest-rates but also changes in the repayments of the underlying loans as a result of changes in economic conditions or the circumstances of the holder of the loan. These securities can therefore be more sensitive to economic events, may be subject to severe price movements and can be more difficult and/or more expensive to sell in difficult markets. The fund may invest in exchange traded funds which have exposure to property securities and commodities (through an index). Property investments are subject to adverse changes in economic conditions, adverse local market conditions and risks associated with the acquisition, financing and ownership and operation and disposal of real property. The underlying commodities index may concentrate investment on selected commodity futures of multinational markets. This makes the exchange traded fund extremely dependent on the performance of the commodity markets concerned. The Fund may invest more than 10% of its Net Asset Value in the units of UCITS and/or other UCIs. The fund invests in fixed interest securities issued by companies which, compared to bonds issued or guaranteed by governments, are exposed to greater risk of default in the repayment of the capital provided to the company or interest payments due to the fund. The strategies utilised by the Fund involve the use of derivatives to facilitate certain investment management techniques including the establishment of both 'long' and 'synthetic short' positions and creation of market leverage for the purposes of increasing the economic exposure of a Fund beyond the value of its net assets. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Funds. Investors in this fund should understand that the Fund is not guaranteed to produce a positive return and as an absolute return product, performance may not move in line with general stock market trends as both positive and negative share movements affect the overall value of the fund. The Manager employs a risk management process to oversee and manage derivative exposure within the Fund. The Fund may be exposed to finance sector companies, as a service provider or as counterparty for financial contracts. Liquidity in the financial markets has been severely restricted, causing a number of firms to withdrawn from the market, or in some extreme cases, becoming insolvent. This may have an adverse affect on the activities of the fund.
