The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Fidelity Europe Quality Income UCITS ETF

a sub-fund of Fidelity UCITS ICAV I

Fidelity Europe Quality Income UCITS ETF - Acc
(ISIN:IE00BYSX4283)

This fund is managed by FIL Investment Management (Luxembourg) S.A.

Objectives and Investment Policy

Objective: The fund aims to provide investors with a total return, taking into account both capital and income returns, which reflects, before fees and expenses, the return of the Fidelity Europe Quality Income Index (the "Index").

Investment Policy: The investment policy of the fund is to track the performance of the Index as closely as possible, regardless of whether the Index level rises or falls, while seeking to minimise as far as possible the tracking error between the fund's performance and that of the Index.

The fund will aim to replicate the Index by holding all of the Index securities in a similar proportion to their weighting in the Index.

The fund may use derivatives for efficient portfolio management and currency hedging purposes.

Investment Process: The fund uses a benchmark "index tracking" (also known as "passive") investment management approach by tracking the Index.

The Index is designed to reflect the performance of stocks of large and mid-capitalization dividend paying companies that exhibit quality fundamental characteristics from countries within Europe. The Index comprises the equity securities of the relevant companies.

The Index constituents are also screened according to fundamental measures as well as certain environmental, social and governance ('ESG') exclusionary criteria based on norm-based screening and negative screening of certain sectors, companies or practices.

For more information on the Index, please refer to the publically available index methodology at www.spdji.com.

Benchmark: Fidelity Europe Quality Income Index. Used for: index tracking

Base Currency: EUR.

Distribution: As this is a non-distributing share class, dividends are re-invested.

Risk and Reward Profile

Historical data may not be a reliable indication for the future.

The risk category shown is not guaranteed and may change over time.

The lowest category does not mean a "risk free" investment.

The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

The value of your investment may fall as well as rise and you may get back less than you originally invested.

The fund may invest in instruments denominated in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the value of your investment.

This Fund is categorised in risk class 6 because, in accordance with the investment policy, the value of the investments may fluctuate considerably. Consequently, both the expected return and the potential risk of loss may be high.

Additional risks: Currency, hedging.

Charges for this fund

The charges you pay are used to pay the costs of running the fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.
