

HSBC Global Investment Funds

GLOBAL LOWER CARBON BOND

Monthly report 31 March 2024 | Share class AC

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of bonds that has a lower carbon footprint than its reference benchmark. The Fund qualifies under Article 8 of SFDR.

Investment strategy

The Fund is actively managed.

In normal market conditions, the Fund will invest at least 70% of its assets in investment grade and non-investment grade bonds issued by companies that are based in developed markets and emerging markets. The Fund will invest in bonds issued by companies with consideration of their Lower Carbon Criteria.

The Fund will also invest in Green Bonds meeting the Green Bond Principles of the International Capital Market Association. The Fund will not invest in companies involved in the production of tobacco or related activities.

The Fund may invest up to 10% in onshore Chinese bonds which are issued within the People's Republic of China and traded on the China Interbank Bond Market.

The Fund may invest up to 10% in non-investment grade bonds and up to 10% in ABS and MBS.

The Fund may invest up to 10% in contingent convertible securities and up to 10% in other funds, including HSBC funds.

The Fund's primary currency exposure is to USD.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Performance

Performance is annualised when calculation period is over one year. Past performance does not predict future returns. Fund return: NAV-to-NAV basis. For comparison with benchmark.

*Share class denoted with "(Net)" refers to fund return net of maximum initial charge (SG) on a single pricing (NAV) basis. No redemption charge is levied.

This is a marketing communication. Please refer to the prospectus and to the KID before making any final investment decisions.

Monthly performance commentary

A more dovish central bank tone and continued strong US growth saw risk assets move higher in March while rates volatility moderated. This saw global credit spreads move tighter overall for the month, edging closer to their historical tights. In combination with lower rate volatility this saw strong positive total return for both Investment Grade and High Yield markets in March. Monthly IG issuance weakened in March with \$167.8 billion, for a Q1 total of \$657.7 billion. HY supply remained steady with \$26.4 billion issued over the month for a Q1 total of \$82.6 billion. US Treasury yields fell marginally in March with the curve reinverting somewhat lead by a larger move in longer dated maturities. The 2, 5, 10 and 30 year moved lower by 0, -3, -5 and -4 basis points to finish the month at 4.62%, 4.21%, 4.20% and 4.34% respectively. In this market context the fund's benchmark returned 1.33% over the month.

Overall strategy performance was positive on an absolute basis outperforming the reference benchmark gross of fees.

Regionally the underweight to the US and overweight to Europe and the UK added to relative performance as the US was the weakest performing region over the month. This was further boosted by positive selection effects which each regional segment of the portfolio outperforming its investment universe. Duration positioning detracted from performance overall. While the overweight to duration was beneficial as rates fell, this was offset by curve positioning with a steepener, which detracted as the curve reinverted somewhat over the month.

Regionally the portfolio is underweight the US, and overweight Europe and the UK. The regional weights for the US, EUR and UK are 47%, 44% and 9% respectively. The average credit rating of the portfolio is A-/BBB+ in line with the benchmark with an overweight to AAA, AA and BBB rated bonds and an underweight A rated bonds. The fund also has a small off benchmark exposure to BB rated bonds of less than 1%. From an industry perspective the strategy's largest overweights are to financials and treasuries. Financials offer attractive relative value as well as lower relative carbon footprints vs industrials while Treasuries represent the portfolio's more cautious credit positioning. The main underweights are to consumer non-cyclicals and energy on the basis of less attractive valuations as well as a higher carbon footprint for energy. The overall duration is overweight the benchmark by 0.29 years at 5.90 on an option adjusted basis and the portfolio beta is just above 1.

Outlook

Q2 began with a shift in market expectations for when the Fed would begin to cut rates. Strong economic data as well as more hawkish comments from Fed members which emphasized the need for additional data to confirm a trajectory of lower inflation before a potential move has increased uncertainty around when the Fed could begin to cut. This has seen an increase in rate volatility as markets reprice. Credit spreads continue to be historically tight but remain underpinned by solid credit fundamentals and a robust economic outlook. Our expectation is still that the global economy will eventually slow and as a result, over the longer-term spreads are more likely to move wider. In the short term however, we don't see any specific catalyst that would send spreads meaningfully wider, and we expect they could continue to grind tighter. As a result, we are currently positioned with a more neutral bias but remain selective between sectors and issuers based on relative value.

For Investment Grade portfolios our credit positioning remains neutral in the short term with a beta of close to or slightly above 1 as despite the longer-term expectation of an economic slowdown, we don't see an immediate driver to send spreads meaningfully wider over the next few months. We remain focused on issuer selection however with an emphasis on companies with stable or improving credit fundamentals and attractive relative value. Regionally we are maintaining our overweight to Europe vs the US given better valuations and the attractive level of hedge carry when converting back to USD. Portfolio duration is currently overweight the benchmark and positioned along the curve for a steepening.

Company carbon data, can often be “partially disclosed”, i.e. partial geographic coverage, or incomplete operational data. Trucost* undertakes analysis and research to assess company reported results. The proprietary Trucost model enables an estimate of total emissions which relies on more than just reported financial data. Where securities are not covered by Trucost, HSBC assigns a proxy value based on the average intensity score of comparable companies.*Trucost are a division of S&P Global; they assess risks relating to climate change, natural resource constraints, and broader environmental, social, and governance factors.

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

Benchmark disclosure

The Investment Advisor will use its discretion to invest in securities not included in the reference benchmark based on active investment management strategies and specific investment opportunities. It is foreseen that a significant percentage of the Fund's investments will be components of the reference benchmark. However, their weightings may deviate materially from those of the reference benchmark. The deviation of the Fund's performance relative to the benchmark is monitored, but not constrained, to a defined range.

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.

The above table cites the last dividend paid within the last 12 months only.
Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.
The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation: ((1 + (dividend amount / ex-dividend NAV))^n)-1, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12. The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.
Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.
