This summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

#### HIGHLIGHTS

LO Selection - The LATAM Bond Fund USD is an actively managed, diversified investment vehicle dedicated to bonds issued by Latin American entities. It invests mainly in USD denominated securities while retaining the possibility to be exposed up to 15% in Latin American local currency bonds on an opportunistic basis. The fund's investment approach is flexible and value-oriented, combining a mix of top-down and bottom-up analysis. The active process aims to match market returns over an investment cycle while limiting volatility and downside risk. The fund is not benchmark-driven, which allows the team to provide high diversification in terms of issuers and sectors, while maintaining a particular focus on liquidity and drawdown risk mitigation. Duration risk, sector, rating and country allocations are adjusted based on medium term and tactical views. The team applies an integrated and continuous risk-management process that pursues two aims: protecting clients' wealth and seizing opportunities. Risk management is performed by fund managers at a portfolio level, alongside independent teams who manage investment risks and monitor operational risks.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

**Credit risk:** A significant level of investment in debt securities or risky securities implies that the risk of, or actual, default may have a material impact on performance. The likelihood of this depends on the credit-worthiness of the issuers.

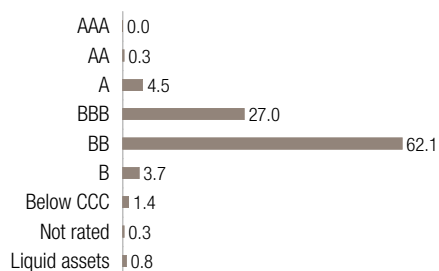

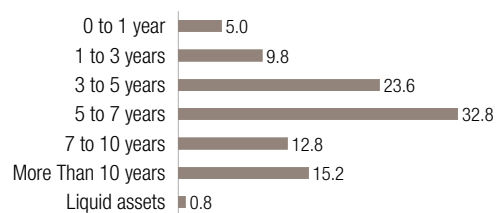

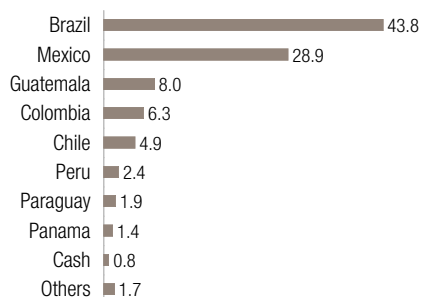

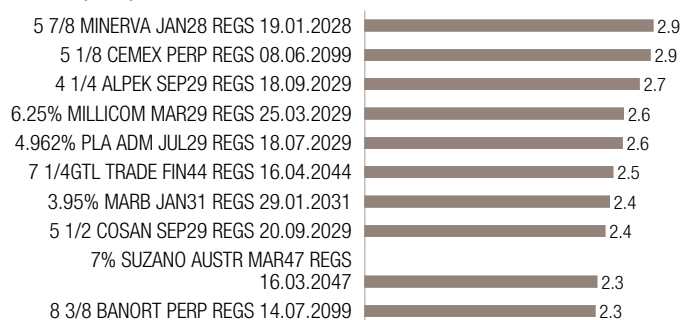

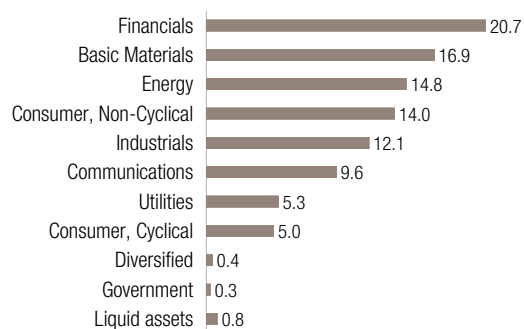

**Liquidity risk:** Where a significant level of investment is made in financial instruments that may under certain circumstances have a relatively low level of liquidity, there is a material risk that the fund will not be able to transact at advantageous times or prices. This could reduce the fund's returns.

**Emerging market risk:** Significant investment in emerging markets may expose to difficulties when buying and selling investments. Emerging markets are also more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.

Before taking any investment decision, please read the latest version of the prospectus, the articles of incorporation, the Key Information Documents (KIDs) and the latest annual report and semi-annual report. Please pay attention to the Appendix B "Risk Factors Annex" of the prospectus.

Incorporation of extra-financial risks into the investment decision process may result in underweighting of profitable investments from the sub-fund's investment universe and may also lead the management of the sub-fund to underweight investments that will continue to perform. Sustainability risks may lead to a significant deterioration in the financial profile, profitability or reputation of an underlying investment and may therefore have a significant impact on its market price or liquidity.

This product is not a financial product subject to Article 8 or Article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial sector (the "SFDR"). The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

## GLOSSARY

**Credit Ratings:** The credit ratings breakdown mentioned for convertible funds is a blend of ratings performed internally as well as ratings provided by external sources.

**Risk and Reward Profile:** This summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

**Total Expense Ratio (TER):** The total fees involved in managing and operating a fund. The TER included the annual management fee and other charges, for example legal, admin, and audit costs (source: annual audited reports or semi annual non audited reports). The Total Expense Ratio (TER) is calculated twice per year and is subject to change between calculation dates.

**Volatility:** A statistical measure of the fluctuations of a security's price. It can also be used to describe fluctuations in a particular market. High volatility is an indication of higher risk.

**Sharpe Ratio:** A measure of risk-adjusted performance. The higher the ratio, the better risk-adjusted performance has been.

**Drawdown:** A draw down is usually quoted as the percentage between the peak and trough of an investment during a specific period. It can help to compare an investment's possible reward to its risk.

**Correlation:** Correlation is a measure of how securities or asset classes move in relation to each other. Highly correlated investments tend to move up and down together while investments with low correlation tend to perform in different ways in different market conditions, providing investors with diversification benefits. Correlation is measured between 1 (perfect correlation) and -1 (perfect opposite correlation). A correlation coefficient of 0 suggests there is no correlation.

**Tracking Error:** A measure of how closely an investment portfolio follows the index against

which it is benchmarked.

**Bond Floor:** The lowest value that convertible bonds can fall to, given the present value of the remaining future cash flows and principal repayment. The bond floor is the value at which the convertible option becomes worthless because the underlying stock price has fallen substantially below the conversion value.

**Delta:** The ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative.

**Premium:** If a fixed-income security (bond) is purchased at a premium, existing interest rates are lower than the coupon rate. Investors pay a premium for an investment that will return an amount greater than existing interest rates.

**Yield to Maturity:** The rate of return anticipated on a bond if it is held until the maturity date.

**Coupon:** The interest rate stated on a bond when it's issued.

**Modified Duration:** This formula is used to determine the effect that a 100-basis-point (1%) change in interest rates will have on the price of a bond.

**Average Duration:** The average modified duration of the portfolio expressed in years.

**Expected Loss:** Annual average expected loss to the portfolio expressed in percent.

**Attachment Point:** The modelled probability of a negative portfolio return in any given year.

**FROC (Fixed Rate of Operational Costs):** It cover the Operational Costs directly incurred by the Company ("Direct Costs") and those resulting from the activities carried out by the Management Company on behalf of the Company ("Fund Servicing Costs").

**Swinging Single Pricing (SSP):** SSP is an adjustment to the NAV per share in consideration of subscription and redemption activity on a dealing day. A fund must have a record of more than three years. Star ratings are graded on a curve: the top 10% of funds receive five stars, the next 22.5% receive four stars, the middle 35% receive three stars, the next 22.5% receive two stars and the bottom 10% get one star. A rating alone is an insufficient basis for an investment decision. A rating is drawn for illustration purposes only and is subject to change. It is not a recommendation to invest in the Fund. It does not predict future performance of the Fund. There is no guarantee that the investment objective of the Fund will be reached.
