##### Investment policy:

The Fund invests primarily in U.S. companies and focuses on larger issuers.

The Fund may invest no more than 10% of its net assets in undertakings for collective investment.

The Fund is actively managed and normally invests across a wide range of sectors and industries. The Investment Manager employs a growth style of equity management that emphasises companies with sustainable competitive advantages, long-term structural growth drivers, attractive cash flow returns on invested capital, and management teams focused on creating long-term shareholder value.

The Investment Manager aims to invest in companies whose shares are selling significantly below the Investment Manager's estimate of intrinsic value.

#### Risk and Reward Profile

The Fund is ranked 5 on the synthetic risk and reward indicator scale, which is based on historical data. Due to its exposure to equity markets, the Fund may experience important volatility, as expressed by its rank on the above scale. Historical data may not be a reliable indication for the future.

The risk category shown is not guaranteed and may shift over time. There is no capital guarantee or protection on the value of the Fund. The lowest category does not mean "risk free".

##### Special Risk Considerations

**Portfolio concentration risk:** Funds investing in a limited number of securities may increase the fluctuation of such funds' investment performance. If such securities perform poorly, the fund could incur greater losses than if it had invested in a larger number of securities.

**Geographic concentration risk:** Funds that concentrate investments in certain geographic regions may suffer losses, particularly when the economies of those regions experience difficulties or when investing in those regions become less attractive. Moreover, the markets in which the funds invest may be significantly affected by adverse political, economic or regulatory developments.

**Growth/Value Equities risk:** Investments in equities tend to fluctuate more than investments in bonds, but also offer greater potential for growth. The price of equity investments may sometimes fluctuate quite dramatically in response to the activities and results of individual companies, as well as in connection with general market and economic conditions. Additionally, funds may hold equities having either a growth or value bias; prices of the growth bias equities tend to be more sensitive to certain market movements as they are often subject to factors such as future earnings expectations which may vary with changing market conditions; whereas equities with a value bias may continue to be underpriced by the market for sustained periods of time.

Please refer to the section entitled "Specific Risks" of the Prospectus for additional details on risks.
