(the "Sub-Fund") a Sub-Fund of PrivilEdge (the "SICAV")

Objectives and Investment Policy

Objectives and Investment Policy

The Sub-Fund is actively managed in reference to a benchmark. The BofAML EUR Currency High Yield Constrained TR (the "Benchmark") is used for performance comparison and for internal risk monitoring purposes only, without implying any particular constraints to the Sub-Fund's investments. Bond issuers represented in the portfolio of the Sub-Fund will generally be similar to those of the Benchmark however, their weightings are expected to differ materially and the Investment Manager has discretion to select issuers that are not part of the Benchmark universe. The Sub-Fund's holdings are therefore expected to deviate materially from the Benchmark. However, under a low volatility environment, the performance of the Sub-Fund may be close to that of the Benchmark. The Sub-Fund aims to generate capital growth over the medium term by investing in below investment grade corporate debt

securities that are denominated in European currencies. It mainly invests in high yield fixed and floating rate debt securities issued by corporate entities and denominated in EUR, GBP or CHF. The Investment Manager may invest up to 20% of the Sub-Fund's net assets in debt securities that are not denominated in EUR, GBP or CHF or that are rated investment grade.

Risk and Reward Profile

What does it mean?

This indicator (SRRI) represents the annualized historical volatility of the Sub-Fund over a 5-year period. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Category

The Sub-Fund invests mainly in European lower-quality debt securities issued by companies.

Are there any other particular risks?

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

- Credit risk: A significant level of investment in debt securities or risky securities implies that the risk of, or actual, default may have a material impact on performance. The likelihood of this depends on the credit-worthiness of the issuers.
- Counterparty risk: When a fund is backed by a guarantee from a third party, or where its investment exposure is obtained to a material degree through one or more contracts with a counterparty, there could be a material risk that the counterparty to the transactions will fail to honor its contractual obligations. This may result in a financial loss to the Fund.
- Financial, economic, regulatory and political risks: Financial instruments are impacted by various factors, including, without being exhaustive, the development of the financial market, the economic development of issuers who are themselves affected by the general world economic situation, and economic, regulatory and political conditions prevailing in the relevant country.
