Vontobel Fund - TwentyFour Strategic Income Fund AHN (hedged), EUR

Morningstar Rating as of 29.02.2024 ★★★★★

Marketing document for retail investors in: AT, CH, DE, ES, GB, LU

Investment objective

This bond fund aims to achieve an attractive level of income and capital growth over a full economic cycle, while respecting risk diversification.

Key features

The fund invests worldwide in a variety of government bonds, supranational bonds, investment-grade and high-yield corporate bonds, emerging market bonds, contingent convertible bonds, and asset-backed securities, denominated in various currencies. At the point of purchase, exchange rate risks against the fund currency are fully hedged. The fund can use derivative financial instruments for hedging purposes.

Approach

The experienced investment team takes a high-conviction approach to finding the best relative-value opportunities available in the investment universe, based on rigorous macro-economic and technical analyses combined with detailed credit analysis. Striving to benefit throughout the credit cycle from both rising and declining rate environments, the team flexibly allocates interest-rate and credit risks in line with their continuous assessment of market conditions and future developments. They also use interest-rate and credit derivatives to either optimize or reduce exposures.

Sector breakdown (%)**Risks**

- Limited participation in the potential of single securities.
- Investments in foreign currencies are subject to currency fluctuations.
- Success of single security analysis and active management cannot be guaranteed.
- It cannot be guaranteed that the investor will recover the capital invested.
- Derivatives entail risks relating to liquidity, leverage and credit fluctuations, illiquidity and volatility.
- Interest rates may vary, bonds suffer price declines on rising interest rates.
- The structure of ABS/MBS and the pools backing them might be intransparent which exposes the subfund to additional credit and prepayment risks (extension or contraction risks) depending on which tranche of ABS/MBS is purchased by the subfund.
- The Sub-Fund's investments may be subject to sustainability risks. The sustainability risks that the Sub-Fund may be subject to are likely to have an immaterial impact on the value of the Sub-Funds' investments in the medium to long term due to the mitigating nature of the Sub-Fund's ESG approach.
- The Sub-Funds' performance may be positively or negatively affected by its sustainability strategy.
- The ability to meet social or environmental objectives might be affected by incomplete or inaccurate data from third-party providers.
- Information on how environmental and social objectives are achieved and how sustainability risks are managed in this Sub-Fund may be obtained from www.twentyfouram.com/sustainability and Vontobel.com/SFDR.

Glossary

Collateralised debt obligation (CDO) is a structured finance product backed by a pool of debt assets, such as mortgage-backed securities (MBS), asset-backed securities (ABS), collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs). Typically these structures pool cash flows from the underlying assets and then pay investors based on their seniority, so that investors in more senior tranches of the CDO receive their payments first, while investors in the most junior tranches suffer any losses first. **Collateralised loan obligation (CLO)** is a type of CDO which involves pools of corporate loans, refinanced in a securitized structure. **Credit default swap (CDS)** is a derivative financial instruments which allows an investor to offset default risks. Similar to an insurance contract, if an investor buys a CDS on a security, the investor is reimbursed by the counterparty if the security defaults within a certain period. **Credit-spread duration**, or credit duration, or spread duration, is a measure of the sensitivity of the price of a bond to a change in credit spreads. **Derivative** is a financial security whose price is determined based on an underlying benchmark or asset such as stocks, bonds, commodities, currencies, interest rates, or market indexes. Examples are futures, options and credit default swaps. **Distribution**, or dividend, is a payment by a fund to its investors who hold distributing share classes (compartments with payouts). The distribution (or dividend) yield is calculated as all payouts over the last 12 months divided by the price per share (typically, the latest NAV), and may be affected by variable payments seasonality. **Distribution policy** of a fund defines the dividend distribution for its share classes to investors. Accumulating share classes reinvest the income received from the fund holdings back into the fund and do not distribute to shareholders. Distributing shares typically make cash payments to shareholders on a periodic

basis. **Duration**, or Macaulay Duration, indicates the number of years an investor would need to maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. The longer the duration, the more a bond's price will be affected by changes in interest rates. Duration may also be used to compare the risk of debt securities with different maturities and yields. **Environmental, social and governance (ESG)** criteria are a set of metrics or ratings that are used to screen potential investments for issues that might affect the financial performance and/or have a material impact on environment and society. ESG metrics reported in this document are for informative purposes and may not be part of the fund's investment process. **Forward**, or forward contract, is an agreement between two parties to buy or sell an asset at a specified price on a future date, and is often used for hedging purposes or commodities trading, where a forward contract can be customized to an amount, delivery date, and commodity type (e.g. food, metals, oil or natural gas). **Future**, or futures contract, is a legal agreement to buy or sell a particular commodity asset, currency or security at a predetermined price at a future point in time. They are standardized contracts in terms of quality and quantity which facilitates trading on a futures exchange. **ISIN** (International Securities Identification Number) is a unique code that identifies a specific financial security. It is assigned by a country's respective national numbering agency (NNA). **Management fee** is a fee which covers the costs charged to a fund relating to portfolio management services and, if applicable, to distribution services. **Maturity** indicates the length of time until the initial investment amount of a bond is due to be repaid. "Average maturity" is calculated on a bond portfolio by weighting each bond's residual maturity by its relative size. **Modified duration** is an adjusted version of Macaulay Duration and measures the percentage change in a bond price as a result of a change in yield. It is used to measure the sensitivity of a bond's cash flows to a change in interest rates and is more commonly used than Macaulay Duration. **Net Asset Value (NAV) / share** also known as the share price of a fund, represents the value per share of the fund. It is calculated by dividing the fund's assets less its liabilities by the number of shares outstanding. For most funds it is calculated and reported daily. **Ongoing charges** expresses the sum of the costs of running a fund on an ongoing basis, like the management fee and various legal and operating costs. It is calculated retroactively over a period of 12 months as a percentage of the fund assets. If the available data is insufficient, for example, for newly launched funds, ongoing charges may be estimated using data from funds with similar characteristics. **Option** is a derivative, financial instrument whose price derives from the value of underlying securities, like stocks. Call/put options give buyers the right (but not the obligation) to buy/sell an underlying asset at an agreed price and date. **Rating**, or credit rating, assesses a bond issuer's ability to repay on time all its debt (interest and principal). High ratings, like AAA or Aaa, indicate low risk (i.e., low probability of default), while ratings such as BBB- or Baa3 indicate a higher risk. **Share class** is a compartment of a fund with a distinct client type, distribution policy, fee structure, currency, minimum investment, or other characteristics. The characteristics of each share class are described in the fund prospectus. **SRRI** is a value based on a sub fund's volatility, providing a gauge of the overall risk and reward profile of the sub fund. **VALOR** is an identification number issued by SIX Financial Information and assigned to financial instruments in Switzerland. **Volatility** measures the fluctuation of a fund's performance over a certain period. It is most commonly expressed using the annualized standard deviation. The higher the volatility, the riskier a fund tends to be. **WKN** (or Wertpapierkennnummer) is an identification code of securities registered in Germany, issued by its Institute for Issuance and Administration of Securities. **Yield to worst (YTW)** represents the lowest potential annual return of a bond that does not default, for instance, if a bond may be called by the issuer prior to maturity. **Yield to worst (YTW), estimated in another currency** estimates the yield to worst which an investor in the mentioned currency would receive. It is estimated based on interest rate differentials minus estimated hedging costs.
