The benchmark is effective from 11/26/2020. It is to be considered for information between 02/14/2020 and 11/26/2020.

INVESTMENT STRATEGY

The fund aims to achieve a return (net of fees) superior to that of its benchmark index, the Solactive Bund Daily (-1x) Inverse Index, over the recommended investment period of two years. In other words, the objective of the La Française Protectaux fund is to achieve positive performance against a backdrop of rising eurozone 10-year interest rates, with a recommended investment period of two years.

NET PERFORMANCES

The figures quoted relate to previous years. Past performance is not a reliable indication of future performance. This performance does not take into account the fees and costs for the issue and redemption of units.

When an offer is made to institutional investors in accordance with Article 304 of the SFA, certain restrictions may apply to the shares acquired under such an offer.

Manager: Current management team, subject to change with time.

DEFINITIONS

The synthetic risk indicator makes it possible to assess the level of risk of this product compared to others. It indicates the likelihood of this product incurring losses in the event of market developments or our inability to pay you.

Volatility is a measure for the strength of fluctuation in the performance of the fund during a certain period. The higher it is the more volatile and therefore risky a fund is.

The Sharpe Ratio measures the average return earned in excess in dependency of the risk relative to a benchmark (risk-free rate). For the assessment of this key figure, the attainable riskfree yield is subtracted from the yield actually earned. The result is divided by the risk that has been taken by the fund. A Sharpe Ratio > 1 indicates that an excess yield compared to the riskfree money market investment has been earned. At the same time, it shows the ratio of this excess yield to the risk taken. In reverse, a negative Sharpe Ratio (<0) illustrates that the money market interest rate has not been outperformed.

Max.Drawdown: Historical maximum loss that would have been incurred by an investor who invested at the highest and exited at the lowest

The recovery is the time needed to recover the maximum loss (max drawdown).

Modified duration: makes it possible to measure the percentage change, upward or downward, of the price of a bond or of the net asset value of a bond UCITS, induced by a 1% fluctuation of market interest rates.
