What does it mean?

This indicator (SRRI) represents the annualized historical volatility of the Sub-Fund over a 5-year period. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Category

The Sub-Fund invests in a diversified portfolio of equities, bonds, hedge funds, and precious metal securities. Exposures to the main asset classes are dynamically managed depending on their respective attractiveness over time while applying strict risk controls.

Are there any other particular risks?

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

- Credit risk: A significant level of investment in debt securities or risky securities implies that the risk of, or actual, default may have a material impact on performance. The likelihood of this depends on the credit-worthiness of the issuers.
- Operational risk and risks related to asset safekeeping: In specific circumstances, there may be a material risk of loss resulting from human error, inadequate or failed internal systems, processes or controls, or from external events.
- Active management risk: Active management relies on anticipating various market developments and/or security selection. There is a risk at any given time that the fund may not be invested in the highest-performing markets or securities. The fund's net asset value may also decline.

For more details about risk, see appendix B "Risk Factors Annex" of the prospectus.
