

# Mirabaud - Global Short Duration NH cap. EUR

29 December 2023

## Investment Overview

A global fixed income strategy that aims for a positive total return with lower volatility by dynamically managing short-duration bonds across the investment grade and high yield universe. We focus on hard maturity (not callable) bonds to limit default, extension risk and volatility. A top-down, macro view informs our allocation across the different geographies and sectors. With an emphasis on quality, our bottom-up analysis incorporates fundamental, technical and valuation (FTV) factors, along with ESG integration to help us identify strong sustainable opportunities.

## Approach to Sustainability

We encourage responsible and sustainable industry practices, and assess how material ESG issues can positively and negatively impact the overall credit profile. The integration of ESG and extra-financial considerations into our analysis is key to understanding risk and long-term opportunity. Our three-step process: 1. Exclusion – we apply an exclusion filter for controversial activities; 2. Positive screening – companies are reviewed according to their ESG-climate profile using a traffic light system that classifies the universe into green, orange and red investments; we exclude the worst performing 20%. Eligible companies are subject to Fundamental, Technical & Valuation analysis to define the portfolio 3. Engagement (post-investment), through active engagement we address ESG/climate issues and encourage best practices among orange issuers and across critical sectors for energy transition.

## Classification

**SFDR<sup>1</sup>:** Article 8

**Summary Risk Indicator<sup>2</sup>:** 2

**Asset Class:** Fixed Income

**Region:** Global

<sup>1</sup> SFDR: Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector

<sup>2</sup> Scale runs from 1 to 7, with 1 being the lowest and 7 being the highest risk.

## Risk Information

Investments in debt securities are subject to interest rate, credit and default risk. The fund may invest in emerging markets that may be more volatile and generate higher operational risks than equity markets of well established economies. The fund may invest in lower rated securities that are subject to higher credit risk and are more volatile than higher rated securities. The fund may invest in asset backed instruments that would lose their value if their underlying assets value was to diminish or if their issuer was to default and be unable to meet its contractual obligations. The fund may invest in securities that are less liquid because buyers/sellers are not always in sufficient numbers to trade these securities readily. Financial derivative instruments may be used as part of the investment process, which may increase the fund volatility and expose the fund to the risk of default of its counterparties. Currency forwards will be used to reduce the currency risk generated by investments in share-classes or instruments that are not denominated in the fund base currency. The effectiveness of that hedging process will be subject to counterparty and operational risk. Cash placed in time deposits or money market funds are exposed to their issuer default risk.

## IMPORTANT INFORMATION

This marketing material contains or may incorporate by reference information concerning certain collective investment schemes ("funds") which are only available for distribution in the registered countries. It is for your exclusive use only and it is not intended for any person who is a citizen or resident of any jurisdiction where the publication, distribution or use of the information contained herein would be subject to any restrictions.
