Investment Objective

The Fund seeks to generate consistent attractive returns on a risk-adjusted basis over a three to five year period.

Fund Description

The Fund targets a dynamic portfolio of investments, directly and indirectly (through derivatives), primarily in high yield (sub investment grade) bonds. These bonds are mainly priced in US Dollars and issued by US and as well as by European and/or emerging market companies.

There is no guarantee that targets will be met. Please see the Key Fund Risks on page 2.

Administrative Notes

The Sustainable Finance Disclosure Regulation (SFDR) classification relates to Regulation (EU) 2019/2088 whereby an investment product classified as: Article 9 has sustainable investment as its objective; Article 8 is promoted on the basis of certain environmental or social characteristics; or Article 6 does not incorporate sustainability into the investment process.
The current Muzinich Funds Prospectus is available at www.muzinich.com , and at www.fundinfo.com .

‡ Ratings shown reflect a blend of Moody's, Fitch and S&P or, where such is unavailable, Muzinich assigned rating but may not reflect the ratings regime used for the account's official guideline compliance calculations.

Key Fund Risks

Credit Risk: Issuers of bonds, loans and other fixed income investments ("Investments") held in the portfolio may default on their obligations or have their credit rating downgraded, possibly resulting in a temporary or permanent decrease in the value of those Investments. Investments in the portfolio may be below investment grade, meaning that they may produce a higher level of income but also carry greater risk of default than higher-rated Investments.

Liquidity Risk: The Fund may face difficulties in purchasing or selling its assets, although it endeavors to invest in liquid securities.

Interest Rate Risk: Fixed-rate bonds held in the Fund may fall in price with an increase in the prevailing level of interest rates in the economy. This risk usually decreases for bonds of lower rating and shorter durations.

Currency Risk: Fluctuations in exchange rates may cause the value of your investment to rise or fall. This unit class may be exposed to currencies other than the one in which the unit class is denominated. Although the Manager endeavours to protect the Fund against currency risk, such hedging, achieved through derivatives (see "Derivative Risk" below), is at the Manager's discretion and it may not be possible or practical to protect against all currency risk.

Derivative Risk: The Fund may use derivative instruments in order to meet its investment objectives. This may result in gains or losses that are greater than the original amount invested. The Fund may also use derivatives to protect against potential risks as described under the other headings in this section. Derivative instruments may rise or fall in price or may be subject to risk of non-payment or non-delivery by a counterparty. There is no guarantee that derivatives will provide the anticipated protection.

Operational Risk: Operational processes, including those relating to the safekeeping of assets, may fail, resulting in losses.

Leverage Risk and Shorting Risk: The Fund may engage in leverage or shorting through financial derivative instruments for investment purposes or as part of a hedging strategy. Use of leverage can magnify both gains and losses in a portfolio, while shorting can reduce portfolio gains in a rising market.

Additional information about these and other risks may be found in the prospectus and supplement for the Fund, both of which are available at www.muzinich.com and www.fundinfo.com.

Glossary of Terms

- Credit Default Swaps (CDS) - An insurance contract, whereby the risk of a third party being unable to pay a debt is 'swapped' for payment of regular premiums. In return for these premiums, the seller of the CDS pays off the buyer if the third party defaults.
- Credit rating - An independent assessment of a borrower's ability to repay its debts. A high rating indicates that the credit rating agency considers the issuer to be at low risk of default; likewise, a low rating indicates high risk of default. (Standard & Poors, Fitch and Moody's are the three most prominent credit rating agencies.)
- Distribution - Income Units will distribute interest income earned after the deduction of expenses. Calculated at the end of every month stated.
- Duration - A measure of the sensitivity of a bond or bond fund to changes in interest rates. The longer a bond or bond fund's duration, the more sensitive it is to interest rate movements.
- Duration to worst - Denotes how sensitive a bond is to changes in the general interest rate environment with shorter durations denoting less sensitivity. It is calculated assuming a bond will be repaid at the date most advantageous to the issuer even if that occurs before the bond's stated maturity date.
- High yield bonds - Bonds with a low credit rating from a recognised credit rating agency. They are considered to be at higher risk of default than better quality, ie, higher-rated bonds, but have the potential for higher rewards.
- Index - An index represents a particular market or a portion of it, serving as a performance indicator for that market.
- Long - Means holding or buying an asset in the expectation that the asset will increase in value.
- Maturity - The date at which a loan or bond is contracted to be repaid (also known as redemption).
- NAV - Net Asset Value per Unit.
- OCF (Ongoing Charges Figure) - It is a measure of the total cost of a fund to the investor. Total costs may include various fees (purchase, redemption, auditing) and other expenses. The OCF is calculated by dividing the total annual cost by the fund's total assets averaged over that year, and is denoted as a percentage.
- Settlement - transactions will be effected by the specified number of working days after it is submitted.
- Short - Means selling an asset that you don't own in the expectation that its price will fall and you can buy it back later at a lower price.
- Yield to Worst - The lowest potential yield that an investor can expect to receive from a bond. Yield to Worst may be the same as the yield to maturity but it will never be higher.

Important Information

Past performance is not indicative of future results. The value of investments and the income from them may fall as well as rise and is not guaranteed and investors may not get back the full amount invested. Where references are made to portfolio guidelines or features, these may be subject to change over time and prevailing market conditions. Any research in this document has been obtained and may have been acted on by Muzinich for its own purpose. The results of such research are being made available for information purposes and no assurances are made as to their accuracy. Opinions and statements of financial market trends that are based on market conditions constitute our judgment and this judgment may prove to be wrong. The views and opinions expressed should not be construed as an offer to buy or sell or invitation to engage in any investment activity, they are for information purposes only. This document is not intended to constitute an offering or placement, or the solicitation of an offer to subscribe for, units or shares in any fund, in any jurisdiction. Any such offering or placement, if made, would be made only by way of a formal offering document and only in jurisdictions in which such an offering or placement would be lawful. Such offering document will contain important information concerning risk factors and other material information. An investment into a fund may expose a person accepted as an investor in such fund to a significant risk of losing some or all of the amount invested. The prices of fixed income securities fluctuate in response to perceptions of the issuer's creditworthiness and also tend to vary inversely with market interest rates. The value of such securities is likely to decline in times of rising interest rates. Conversely, when rates fall, the value of these investments is likely to rise. Typically, the longer the time to maturity the greater are such variations. A Fund investing in fixed income securities will be subject to credit risk (i.e. the risk that an issuer of securities will be unable or unwilling to pay principal and interest when due, or that the value of a security will suffer because investors believe the issuer is less able or willing to pay). Diversification does not guarantee protection from loss.

Please note that investment is subject to documentation, including but not limited to the Prospectus and Key Investor Information Document (KIID) which contain a comprehensive disclosure of applicable risks. Investors in the UK should also access the Muzinich Supplemental Information Document ('SID') Each of these documents is available in English at www.Muzinich.com, together with the Fund's annual and semi-annual reports. KIIDs are available by share class in each language required in the countries in which the share classes are registered. A complete listing of these KIIDs and the KIIDs themselves are also available at www.Muzinich.com. Investors should confer with their independent financial, legal or tax advisors.

Zahlstelle in der Schweiz ist Banque Cantonale de Genève, 17, quai de l'Île, CH-1204 Genf, Schweiz. -

Note on currency hedging: Currency exposure can introduce significant risk to an international bond allocation; hedging that risk can reduce that volatility over time. Hedging currency, however, produces a return - positive or negative - that is distinct from currency return and the return of an investment's underlying bonds. This "hedged return" is part of the investor's total return, and it effectively replaces the currency return. The hedged yield may therefore differ materially from the local currency yield.
