FUND OVERVIEW

The Fund aims to achieve positive absolute returns through a combination of capital growth and income on your investment regardless of market conditions. The Fund seeks to gain at least 70% of any investment exposure to equity securities (e.g. shares) of companies domiciled in, or the main business of which is in, or have their primary listing in the United Kingdom. This is achieved by investing at least 70% of its assets in equity securities and other equity-related securities. The Fund may also, when determined appropriate, invest in fixed income (FI) securities, money market instruments (MMIs) (i.e. debt securities with short-term maturities), deposits and cash. The equity-related securities include financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets).

% CALENDAR YEAR RETURNS

Share Class performance is calculated on a Net Asset Value (NAV) basis, net of fees in the dealing currency specified and do not include sales charge or taxes. Returns assume reinvestment of any distributions. Past performance is not a guide to future performance and should not be the sole factor of consideration when selecting a product.

KEY RISKS: All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed. Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the Fund is more sensitive to any localised economic, market, political or regulatory events. The Fund uses derivatives as part of its investment strategy including the establishment of both 'long' and 'synthetic short' positions and the creation of market leverage for the purposes of increasing the economic exposure of a Fund beyond the value of its net assets. The Manager employs a risk management process to oversee and manage derivative exposure within the Fund. However, the use of derivatives in this manner may have the effect of increasing the overall risk profile of the Fund. Investors should understand that the Fund is not guaranteed to produce a positive return and as an absolute return product, performance may not move in line with general market trends or fully benefit from a positive market environment. The Fund utilises derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk and volatility. The strategies utilised by the Fund involve the use of derivatives to facilitate certain investment management techniques including the establishment of both 'long' and 'synthetic short' positions and creation of market leverage for the purposes of increasing the economic exposure of a Fund beyond the value of its net assets. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Fund. Investors in this Fund should understand that the Fund is not guaranteed to produce a positive return and as an absolute return product, performance may not move in line with general market trends or fully benefit from a positive market environment. The Manager employs a risk management process to oversee and manage derivative exposure within the Fund. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

The Morningstar Analyst Rating is not a credit or risk rating. It is a subjective evaluation performed by the manager research analysts of Morningstar. Morningstar evaluates funds based on five key pillars, which are process, performance, people, parent, and price. Analysts use this five pillar evaluation to determine how they believe funds are likely to perform over the long term on a risk-adjusted basis. They consider quantitative and qualitative factors in their research, and the weighting of each pillar may vary. The Analyst Rating scale is Gold, Silver, Bronze, Neutral, Negative. A Morningstar Analyst Rating of Gold, Silver, or Bronze reflect an Analyst's conviction in a fund's prospects for outperformance. Analyst Ratings are continuously monitored and reevaluated at least every 14 months. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>. The Morningstar Analyst Rating should not be used as the sole basis in evaluating a mutual fund. Morningstar Analyst Ratings are based on Morningstar's current expectations about future events; therefore, in no way does Morningstar represent ratings as a guarantee nor should they be viewed by an investor as such. Morningstar Analyst Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or to differ significantly from what we expected Morningstar rates mutual funds from one to five stars based on how well they've performed (after adjusting for risk and accounting for all sales charges) in comparison to similar funds. Within each Morningstar Category, the top 10% of funds receive five stars, the next 22.5% four stars, the middle 35% three stars, the next 22.5% two stars, and the bottom 10% receive one star. Funds are rated for up to three time periods--three-, five-, and 10 years--and these ratings are combined to produce an overall rating. Funds with less than three years of history are not rated. Ratings are objective, based entirely on a mathematical evaluation of past performance. They're a useful tool for identifying funds worthy of further research, but shouldn't be considered buy or sell recommendations. Morningstar Rating metrics. Morningstar, Inc.® 2023.
