## Investment Commentary<sup>4</sup>

April was another strong month for commodities, including the 1.26p final dividend; the Fund NAV returned 11.5% during the month. Base metals continued their upward trajectory, oil recovered further and precious metal prices also turned positive. Chinese Q1 trade data showed strong demand for industrial metals across the board, even when adjusting for soft base effects from Q1 last year. Taking into account Q1 2020's low base, the numbers were strong with copper's apparent consumption growth of 17% year on year; closely followed by steel, aluminium and zinc. Chinese premier Li Keqiang indicated the nation would strengthen controls to limit commodity inflation, although given this inflation is partially a result of China's efforts to reduce polluting manufacturing capacity, it would require them to step back from an environmental policy that is likely a greater focus for the government.

Copper, which represented nearly a quarter of the Fund's NAV at the beginning of the month, saw notable gains with LME prices rising 11.8% during April. It threatened to break above the previous all-time high of \$10,190/t towards month-end, a level it has now surpassed. This has been a major contributor to the Fund's strong performance. In addition to the strong demand, which has been boosted by environmentally focused government stimulus that remains an important investment theme given copper's use in everything electrical, supply remains relatively constrained with few new projects entering production. Ongoing supply risks in important producing regions of Chile and Peru, whose combined output typically represents around 35% of global copper units, may also act to suppress supply and maintain the tight balance experience in 2020 resulting from Covid-19 related mine closures. Of note, union wage negotiations have raised strike risks in Chile through 2021, while a leftist candidate leading the Presidential election polls in Peru is campaigning to increase tax on Peruvian miners. The increased uncertainty in these regions will deter investment and act to limit supply.

Crude oil prices remained strong, despite a threat to demand from spiking Covid-19 cases in India and OPEC+ continuing with the prior stated strategy to relax production restrictions. Combined OPEC+ production will see a phased increase in output of 2M bbl/d over three months commencing in May. That will leave OPEC+ production cuts at 5.8 Mb/d for H2 2021. The US continues to hold talks with Iran regarding a possible re-establishment of the nuclear deal, adding risk of further supply from the region, which has over 1.0 Mb/d of spare production capacity, should sanctions be lifted. Libya's disclosure that it was experiencing production issues due to a lack of funding from the government provides a potential source of supply disruption.

### Investor Report Monthly Factsheet

### Annual Report & Accounts Published: October

### Results Announced Finals: October Interims: March

In the US, a number of congress members have proposed legislation to improve permitting processes for critical mineral projects, as part of the country's own political drive to reduce reliance on foreign raw materials for a number of strategic metals including rare earths, uranium and nickel. This is supportive for a number of names in the Fund, such as Lynas and Talon Metals, though both these equities slipped back following their recent strong performance.

Strong positive contributions were made by copper producers First Quantum and Capstone, and developer Foran Mining, whose share prices rose 20%, 35% and 22% respectively over the month. Gold producer West African Resources, whose share price rose over 25% after delivering strong results and flagging rapid repayment of its project debt, also made a strong contribution.

Iron ore gained with Q1 output from the large producers falling short of expectations, while some disruption risk arose as a local government in Brazil claimed port environmental breaches by domestic iron ore and steel producer CSN, which could disrupt some 25-30Mt if the port is closed for a lengthy period.

Trading was relatively limited over the period with the Fund adding to its existing position in explorer Palladium One, which has continued to report encouraging copper-nickel drill results at its core Kaukau project in Finland.

CQS is a founder of the Standards Board for Alternative Investments ("SBAI") (formerly, the Hedge Fund Standards Board) which was formed to act as custodian of the alternative investment managers' industry best practice standards (the "Standards") published by the Hedge Fund Working Group ("HFWG") in 2008 and to promote conformity to the Standards. SBAI is also responsible for ensuring that they are updated and refined as appropriate. The Standards were drawn up by HFWG which comprised the leading hedge funds (based mainly in London) in 2007 in response to concerns about the industry, including financial stability and systematic risk. The HFWG completed its work in January 2008 and published its report outlining the Standards. By applying the Standards, managers commit to adopt the "comply or explain" approach described in the Standards.
