In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor iBoxx EUR Liquid High Yield BB UCITS ETF - December 2021

Lyxor Green Bond (DR) UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund has sustainable investment as its objective within the meaning article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector.

In accordance with Article 11 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (the "SFDR Regulation"), the overall sustainability-related impact of the Fund is described by means of the indicators below*:

The following indicators are available for 61.13% of the portfolio weight*

* One or several of the relevant indicators are reported

** Source of the conversion tool: <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>

*Where an index has been designated as a reference benchmark, the description corresponds to a comparison between the overall sustainability-related impact of the financial product with the impacts of the designated index and of a broad market index through sustainability indicators.

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in "Green Bonds" as defined by the Climate Bonds Initiative (CBI). The CBI has developed and implemented a set of criteria to define a Green Bond, including but not limited to (i) environmentally themed (self-labeled) bonds and (ii) adherence with a "Climate Bonds Taxonomy" (CBT) i.e. proceeds of an eligible Green Bond must be used to finance eligible green assets or projects which are typically related to one of the sectors defined in the CBT.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy, carbon energy and efficiency, and green building.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor FTSE Italia All Cap PIR 2020 (DR) UCITS ETF - December 2021

This Fund falls under Article 6 of regulation (EU) 2019/2088 ("SFDR"). It does not promote environmental and/or social characteristics, nor it has sustainable investment as its objective.

Transparency of environmentally sustainable investments in periodic reports in accordance with regulation (UE) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation") sets out criteria to determine which economic activities qualify as environmentally sustainable at Union level.

According to the Taxonomy Regulation, an economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives defined by the Taxonomy Regulation (Climate change mitigation; Climate change adaptation; Sustainable use and protection of water and marine resources; Transition to a circular economy; Pollution prevention and control; Protection and restoration of biodiversity and ecosystems).

In addition, such economic activity shall not significantly harm any such environmental objectives ("do no significant harm" or "DNSH" principle) and shall be carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation.

In accordance with Article 7 of the Taxonomy Regulation, the management company draws the attention of investors to the fact that the investments underlying the Fund do not take into account the European Union criteria for environmentally sustainable economic activities.

Lyxor Core MSCI EMU (DR) UCITS ETF - December 2021

This Fund falls under Article 6 of regulation (EU) 2019/2088 ("SFDR"). It does not promote environmental and/or social characteristics, nor it has sustainable investment as its objective.

Transparency of environmentally sustainable investments in periodic reports in accordance with regulation (UE) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation") sets out criteria to determine which economic activities qualify as environmentally sustainable at Union level.

According to the Taxonomy Regulation, an economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives defined by the Taxonomy Regulation (Climate change mitigation; Climate change adaptation; Sustainable use and protection of water and marine resources; Transition to a circular economy; Pollution prevention and control; Protection and restoration of biodiversity and ecosystems).

In addition, such economic activity shall not significantly harm any such environmental objectives ("do no significant harm" or "DNSH" principle) and shall be carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation.

In accordance with Article 7 of the Taxonomy Regulation, the management company draws the attention of investors to the fact that the investments underlying the Fund do not take into account the European Union criteria for environmentally sustainable economic activities.

Weighted Average Carbon Intensity (tons CO2 e M Sales)

A measure of the portfolio's exposure to the most carbon intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue) The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Low Carbon Transition Score

This indicator aims to identify potential leaders and laggards by measuring companies holistically in terms of their exposure and management of risks and opportunities related to the low carbon transition.

A company level score that measures a company's level of alignment to the Low Carbon Transition Companies with higher Low Carbon Transition score are more aligned with the Low Carbon Transition compared to the companies with lower scores ..(Score 0 10).

Human Rights Concerns Assessment

These indicators indicate whether a company is exposed to reputational and operational risks due to major and or very important (breaches with regard to social issues such as the management of Human Capital and labor).

Human Rights Compliance

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights The possible values are Fail, Watch List, or Pass.

Female Directors Percentage

The percentage of board members who are female For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Board Independence Percentage

The percentage of board members that meet our designated criteria for independence For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in companies according to their ESG ratings and trends (yearly improvement or degradation of ESG ratings) that include environmental key issues such as but not limited to water stress, carbon emissions etc.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy and carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The percentage of board members who are female For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Board Independence Percentage

The percentage of board members that meet our designated criteria for independence For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in companies according to their ESG ratings and trends (yearly improvement or degradation of ESG ratings) that includes environmental key issues such as but not limited to water stress, carbon emissions etc.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in issuers according to an ESG rating that includes environmental key issues such as but not limited to water stress, carbon emissions etc.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor ESG Euro Corporate Bond Ex Financials (DR) UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund promotes environmental and/or social characteristics within the meaning of article 8 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector. Weighted Average Carbon Intensity (tons CO2 e M Sales)

A measure of the portfolio's exposure to the most carbon intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue) The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Low Carbon Transition Score

This indicator aims to identify potential leaders and laggards by measuring companies holistically in terms of their exposure and management of risks and opportunities related to the low carbon transition.

A company level score that measures a company's level of alignment to the Low Carbon Transition Companies with higher Low Carbon Transition score are more aligned with the Low Carbon Transition compared to the companies with lower scores ..(Score 0 10).

Human Rights Concerns Assessment

These indicators indicate whether a company is exposed to reputational and operational risks due to major and or very important (breaches with regard to social issues such as the management of Human Capital and labor.

Human Rights Compliance

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights The possible values are Fail, Watch List, or Pass.

Female Directors Percentage

The percentage of board members who are female For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Board Independence Percentage

The percentage of board members that meet our designated criteria for independence For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in issuers according to an ESG rating that includes environmental key issues such as but not limited to water stress, carbon emissions etc.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy and carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

Transparency of environmentally sustainable investments in periodic reports

The Fund promotes environmental characteristics within the meaning of Article 6 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in companies according to an ESG rating that includes environmental key issues such as but not limited to water stress, carbon emissions etc.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Impact indicators

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives; (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in "Green Bonds" as defined by the Climate Bonds Initiative (CBI). The CBI has developed and implemented a set of criteria to define a Green Bond, including but not limited to (i) environmentally themed (self-labeled) bonds and (ii) adherence with a "Climate Bonds Taxonomy" (CBT) (i.e. proceeds of an eligible Green Bond must be used to finance eligible green assets or projects which are typically related to one of the sectors defined in the CBT).

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy, carbon energy and efficiency, and green building.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund's investment strategy is designed to exceed the minimum standards of the EU CTB under the Benchmark Regulation by integrating among others a broad range of ESG climate-related objectives covering transition risk, climate change opportunities and physical risk. Such strategy permits among others the reduction of overall greenhouse gas emissions intensity compared to the Parent Index by at least 30%.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy and carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor MSCI EM ESG Climate Transition CTB UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund has sustainable investment as its objective within the meaning article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector.

In accordance with Article 11 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (the "SFDR Regulation"), the overall sustainability-related impact of the Fund is described by means of the indicators below*:

Indicator	Portfolio				Parent Index			
	December 2021		December 2020		December 2021		December 2020	
	KPI measure	KPI Coverage rate (%)						
% independent board members	58.2%	100%	56.7%	100%	57.8%	58%	56.3%	56%
Weighted Average Carbon Intensity (Scope 1&2) tCo2e	96.9	100%	155.5	100%	331.6	99%	259.3	100%
% women on board	14.3%	100%	11.8%	99.7%	13.8%	99%	11.8%	99%
Human Rights Compliance		100%				100%		
- Pass	96.9%				96.0%			
- Fail	0.0%				1.2%			
- Watch List	3.1%				2.6%			
Human Rights Concerns Assessment		100%				100%		
- No Concerns	94.9%				93.4%			
- Minor	3.4%				3.5%			
- Moderate	1.7%				2.8%			
- Severe	0.0%				0.1%			
- Very Severe	0.0%				0.1%			
Transition Score	6.6	100%	6.3	100%	5.9	99%	5.8	100%

*Where an index has been designated as a reference benchmark, the description corresponds to a comparison between the overall sustainability-related impact of the financial product with the impacts of the designated index and of a broad market index through sustainability indicators.

Weighted Average Carbon Intensity (tons CO2 e M Sales)

A measure of the portfolio's exposure to the most carbon intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Low Carbon Transition Score

This indicator aims to identify potential leaders and laggards by measuring companies holistically in terms of their exposure and management of risks and opportunities related to the low carbon transition.

A company level score that measures a company's level of alignment to the Low Carbon Transition Companies with higher Low Carbon Transition score are more aligned with the Low Carbon Transition compared to the companies with lower scores. (Score 0-10).

Human Rights Concerns Assessment

These indicators indicate whether a company is exposed to reputational and operational risks due to major and or very important (breaches with regard to social issues such as the management of Human Capital and labor).

Human Rights Compliance

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights. The possible values are Fail, Watch List, or Pass.

Female Directors Percentage

The percentage of board members who are female. For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Board Independence Percentage

The percentage of board members that meet our designated criteria for independence. For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Temperature Alignment

Cet indicateur mesure l'alignement d'un fonds avec différents scénarios climatiques qui ciblent différents potentiels de réchauffement climatique mondial, incluant les objectifs de l'Accord de Paris (en dessous de 2°C, et si possible 1,5°C).

La trajectoire réelle et projetée de chaque entreprise est comparée à chaque trajectoire théorique pour chaque scénario climatique, permettant de déterminer le volume d'émissions de l'entreprise en-dessous ou au-dessus de son budget carbone théorique. Les volumes d'émissions en-dessous ou au-dessus des budgets carbone des entreprises sont alloués au portefeuille et sommés, pour déterminer le volume d'émissions du portefeuille en-dessous ou au-dessus de son budget carbone.

Ces mesures permettent d'en déduire la température d'un portefeuille, en fonction de son alignement avec les différents budgets carbone associés à chaque scénario climatique.

La note méthodologique de Lyxor est disponible <https://www.lyxor.com/methodologie-de-mesure-de-la-temperature-des-fonds-lyxor>.

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund's investment strategy is designed to align with the minimum standards of the EU PAB under the Benchmark Regulation by integrating a broad range of ESG climate-related objectives covering transition risk, climate change opportunities and physical risk. Such strategy permits among others the reduction of overall greenhouse gas emissions intensity compared to the Parent Index by at least 50%.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities. The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 the Taxonomy Regulation.

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund's investment strategy is designed to align with the minimum standards of the EU PAB under the Benchmark Regulation by integrating a broad range of ESG climate-related objectives covering transition risk, climate change opportunities and physical risk. Such strategy permits among others the reduction of overall greenhouse gas emissions intensity compared to the Parent Index by at least 50%.

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to carbon energy and efficiency.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor Net Zero 2050 S&P 500 Climate PAB (DR) UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund has sustainable investment as its objective within the meaning article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector.

In accordance with Article 11 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (the "SFDR Regulation"), the overall sustainability-related impact of the Fund is described by means of the indicators below*:

Indicator	Portfolio				Parent Index			
	December 2021		December 2020		December 2021		December 2020	
	KPI measure	KPI Coverage rate (%)						
Temperature Alignment	1.5	99%	1.5	98.0%	2.5	99%	3.0	97%
Weighted Average Carbon Intensity (Scope 1&2) tCo2e	18.4	100%	31.3	100%	131.6	100%	139.1	100%
% independent board members	81.5%	100%	82.5%	100%	82.3%	82%	81.9%	82%
% women on board	32.4%	100%	32.5%	100.0%	32.5%	100%	31.3%	100%
Human Rights Compliance		100%				100%		
- Pass	86.0%				84.0%			
- Fail	0.0%				0.2%			
- Watch List	13.8%				15.7%			
Human Rights Concerns Assessment		100%				100%		
- No Concerns	84.2%				89.2%			
- Minor	3.5%				2.3%			
- Moderate	12.3%				7.7%			
- Severe	0.0%				0.6%			
- Very Severe	0.0%				0.2%			

*Where an index has been designated as a reference benchmark, the description corresponds to a comparison between the overall sustainability-related impact of the financial product with the impacts of the designated index and of a broad market index through sustainability indicators.

Weighted Average Carbon Intensity (tons CO₂e / M Sales)

A measure of the portfolio's exposure to the most carbon intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue) The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Temperature Alignment

Cet indicateur mesure l'alignement d'un fonds avec différents scénarios climatiques qui ciblent différents potentiels de réchauffement climatique mondial, incluant les objectifs de l'Accord de Paris (en dessous de 2°C, et si possible 1,5°C).

La trajectoire réelle et projetée de chaque entreprise est comparée à chaque trajectoire théorique pour chaque scénario climatique, permettant de déterminer le volume d'émissions de l'entreprise en-dessous ou au-dessus de son budget carbone théorique. Les volumes d'émissions en-dessous ou au-dessus des budgets carbone des entreprises sont alloués au portefeuille et sommés, pour déterminer le volume d'émissions du portefeuille en-dessous ou au-dessus de son budget carbone.

Ces mesures permettent d'en déduire la température d'un portefeuille, en fonction de son alignement avec les différents budgets carbone associés à chaque scénario climatique.

La note méthodologique de Lyxor est disponible <https://www.lyxor.com/methodologie-de-mesure-de-la-temperature-des-fonds-lyxor>.

Human Rights Concerns Assessment

These indicators indicate whether a company is exposed to reputational and operational risks due to major and or very important (breaches with regard to social issues such as the management of Human Capital and labor).

Human Rights Compliance

This factor indicates whether the company is in compliance with the United Nations Guiding Principles for Business and Human Rights The possible values are Fail, Watch List, or Pass.

Female Directors Percentage

The percentage of board members who are female For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Board Independence Percentage

The percentage of board members that meet our designated criteria for independence For companies with a two tier board, the calculation is based on members of the Supervisory Board only.

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor Core Euro Government Bond (DR) UCITS ETF - December 2021

This Fund falls under Article 6 of regulation (EU) 2019/2088 ("SFDR"). It does not promote environmental and/or social characteristics, nor it has sustainable investment as its objective.

Transparency of environmentally sustainable investments in periodic reports in accordance with regulation (UE) 2020/852

Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation") sets out criteria to determine which economic activities qualify as environmentally sustainable at Union level.

According to the Taxonomy Regulation, an economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives defined by the Taxonomy Regulation (Climate change mitigation; Climate change adaptation; Sustainable use and protection of water and marine resources; Transition to a circular economy; Pollution prevention and control; Protection and restoration of biodiversity and ecosystems).

In addition, such economic activity shall not significantly harm any such environmental objectives ("do no significant harm" or "DNSH" principle) and shall be carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation.

In accordance with Article 7 of the Taxonomy Regulation, the management company draws the attention of investors to the fact that the investments underlying the Fund do not take into account the European Union criteria for environmentally sustainable economic activities.

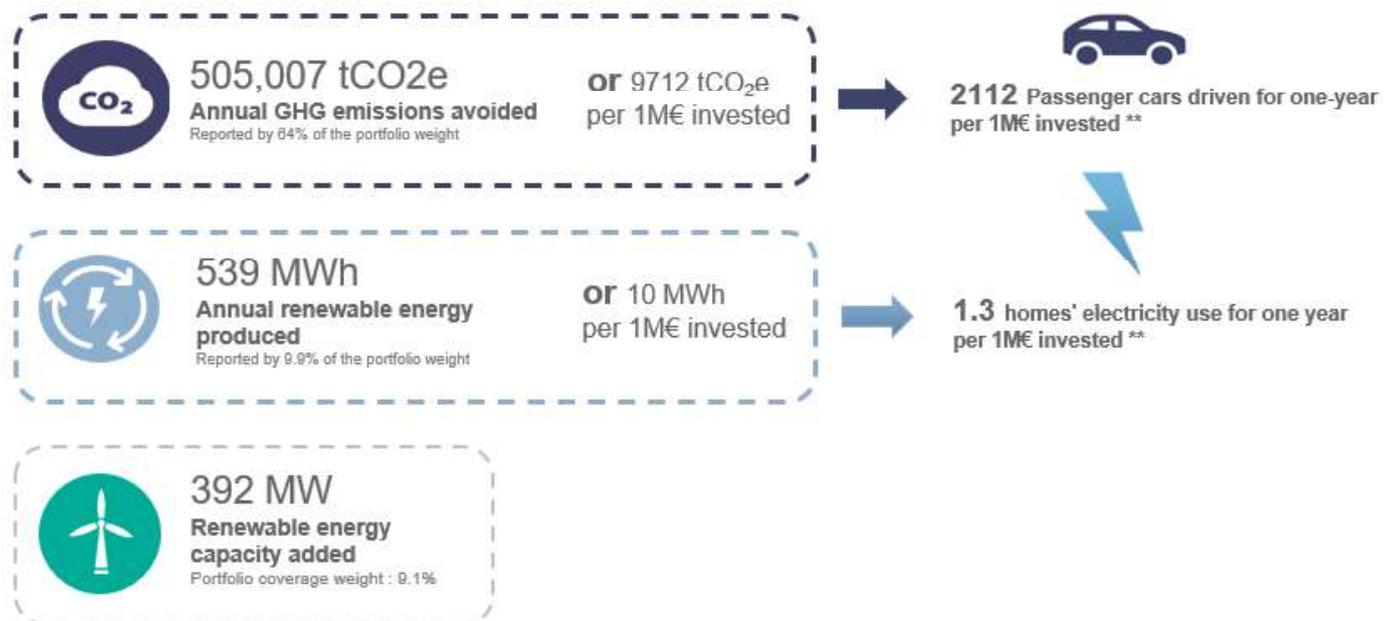

Lyxor Euro Government Green Bond (DR) UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund has sustainable investment as its objective within the meaning article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector.

In accordance with Article 11 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (the "SFDR Regulation"), the overall sustainability-related impact of the Fund is described by means of the indicators below*:

The following indicators are available for 64% of the portfolio weight*

* One or several of the relevant indicators are reported

** Source of the conversion tool: <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>

*Where an index has been designated as a reference benchmark, the description corresponds to a comparison between the overall sustainability-related impact of the financial product with the impacts of the designated index and of a broad market index through sustainability indicators.

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in "Green Bonds" as defined by the Climate Bonds Initiative (CBI). The CBI has developed and implemented a set of criteria to define a Green Bond, including but not limited to (i) environmentally themed (self-labeled) bonds and (ii) adherence with a "Climate Bonds Taxonomy" (CBT) (i.e. proceeds of an eligible Green Bond must be used to finance eligible green assets or projects which are typically related to one of the sectors defined in the CBT).

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy, carbon energy and efficiency, and green building.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

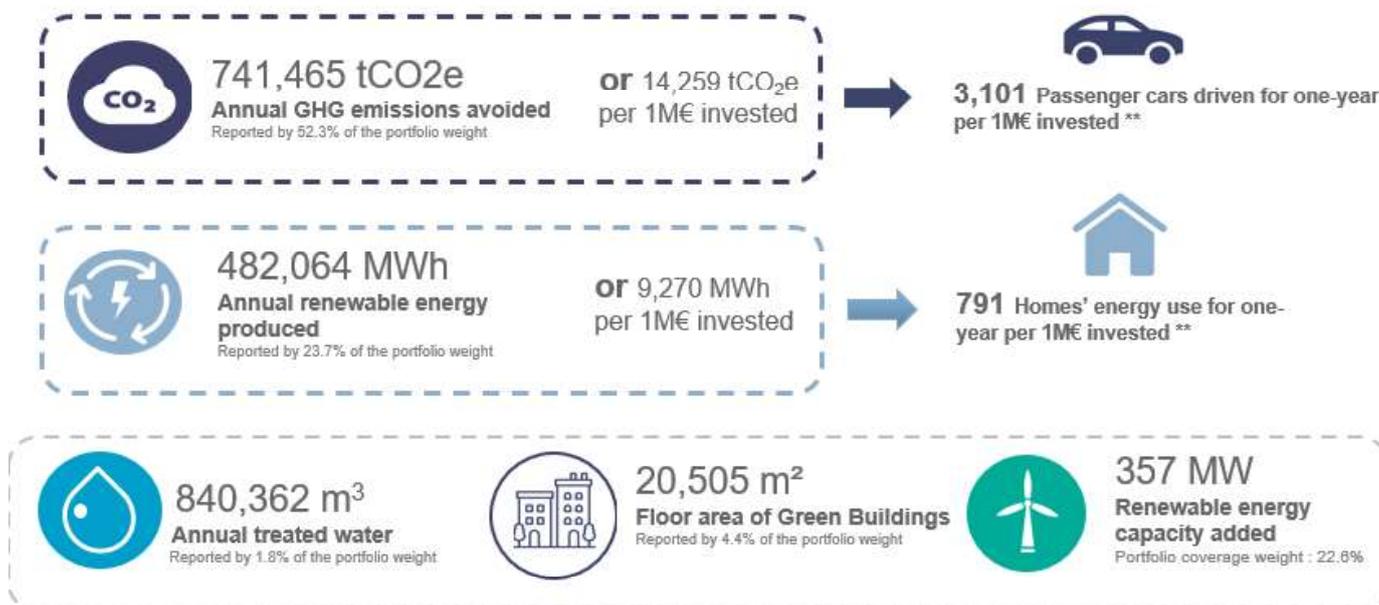

Lyxor Corporate Green Bond (DR) UCITS ETF - December 2021

Transparency of the promotion of sustainable investments in periodic reports

This Fund has sustainable investment as its objective within the meaning article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector.

In accordance with Article 11 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (the "SFDR Regulation"), the overall sustainability-related impact of the Fund is described by means of the indicators below*:

The following indicators are available for 56% of the portfolio weight*

* One or several of the relevant indicators are reported
 ** Source of the conversion tool: <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>

*Where an index has been designated as a reference benchmark, the description corresponds to a comparison between the overall sustainability-related impact of the financial product with the impacts of the designated index and of a broad market index through sustainability indicators.

Transparency of environmentally sustainable investments in periodic reports

The Fund may invest in an economic activity that contributes to an environmental objective within the meaning of Article 5 of Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "Taxonomy Regulation").

The Taxonomy Regulation aims to identify economic activities which qualify as environmentally sustainable (the "Sustainable Activities").

The Taxonomy Regulation identifies such activities according to their contribution to six environmental objectives: (i) Climate change mitigation; (ii) Climate change adaptation; (iii) Sustainable use and protection of water and marine resources; (iv) Transition to a circular economy; (v) Pollution prevention and control; (vi) Protection and restoration of biodiversity and ecosystems.

An economic activity shall qualify as environmentally sustainable where that economic activity contributes substantially to one or more of the six environmental objectives, does not significantly harm any of the environmental objectives ("do no significant harm" or "DNSH" principle) and is carried out in compliance with the minimum safeguards laid down in Article 18 of the Taxonomy Regulation. The "do no significant harm" principle applies only to those investments underlying the Fund that take into account the European Union criteria for environmentally sustainable economic activities.

This Fund may invest, but does not commit to invest at the date of this Prospectus, in economic activities that contribute to the following environmental objectives set out in the Article 9 of the Taxonomy Regulation: climate change mitigation and climate change adaptation.

As described in detail above in sections "Index Objectives" and "Index Methodology", the Fund aims to invest in "Green Bonds" as defined by the Climate Bonds Initiative (CBI). The CBI has developed and implemented a set of criteria to define a Green Bond, including but not limited to (i) environmentally themed (self-labeled) bonds and (ii) adherence with a "Climate Bonds Taxonomy" (CBT) (i.e. proceeds of an eligible Green Bond must be used to finance eligible green assets or projects which are typically related to one of the sectors defined in the CBT).

In line with this investment objective and in order to contribute to the environmental objectives above, it is expected that this Fund will make investments in economic activities eligible under the Taxonomy Regulation including but not limited to alternative energy, carbon energy and efficiency, and green building.

In line with the current state of the Taxonomy Regulation, the management company relies on the administrator of the Index to ensure that such investments do not significantly harm any other environmental objective by implementing exclusion policies in relation to issuers whose environmental and/or social and/or governance practices are controversial.

While the Fund may already hold investments in economic activities that qualify as Sustainable Activities without being currently committed to a minimum proportion, the management company is making its best efforts to disclose such proportion of investments in Sustainable Activities as soon as reasonably practicable after the entry into force of the Regulatory Technical Standards with regards to the content and presentation of disclosures pursuant to Articles 8(4), 9(6) and 11(5) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector, as amended by the Taxonomy Regulation.

This commitment will be achieved gradually and continuously, by initiating discussions with the index administrator in order for it to integrate Taxonomy Regulation requirements within the methodology of the Index as soon as reasonably possible. This will lead to a minimum degree of alignment of the Fund's portfolio with Sustainable Activities that will be made available to investors at that time.

In the meantime, the degree of alignment of the Fund's portfolio with Sustainable Activities will not be available to investors.

As from the full availability of the data and finalization of the relevant calculation methodologies, the description of to what extent the investments underlying the Fund are made in Sustainable Activities will be made available to investors. This information, as well as information relating to the proportion of enabling and transitional activities, will be included in a future version of the prospectus.

For any questions relating to the Taxonomy Regulation, please contact the management company at the following email address: client-services-etf@lyxor.com.

The management company draws the attention of investors to the fact that the investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Lyxor DAX (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the

following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	3%
Orange Flag	32%
Yellow Flag	37%
Green Flag	28%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
102	165	272	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	98%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0003

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	121.7
Gas	222.8
Total	344.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	344.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.6%	4.8%	24.8%
Some efforts	94.1%	92.6%	70.8%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	3.4%	2.6%	4.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	6.2
Operational Transition	13.1%
Production Transition	13.1%
Neutral	74.7%
Solutions	0.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	1.6%	Liquid Fuel	Natural Gas	30.9%	Nuclear
Renewables	21.1%	19.8%	Thermal Coal	26.7%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	30%
20-49.9%	12%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.3%	Energy Efficiency	39.0%	Green Building	0.0%
Pollution Prevention	7.1%	Sustainable Water	9.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	4.1%	Green Building	0.0%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	2%
Heatwave	8%
Hurricane	3%
WaterStress	41%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.5%	74.8%	23.8%	92.9%	4.9%	2.2%
Carbon Emissions	0.9%	41.4%	57.6%	69.0%	17.9%	13.2%
Electronic Waste	2.5%	15.1%	82.4%	100.0%		
Opportunities in Green Building	1.2%	53.4%	45.4%	97.6%	2.4%	
Opp's in Renewable Energy	1.5%	93.1%	5.4%	97.4%	1.2%	1.4%
Packaging Material & Waste	9.3%	46.3%	44.5%	89.3%		10.7%
Water Stress	6.8%	90.5%	2.8%	52.1%	30.6%	17.3%
Toxic Emissions & Waste				45.3%	25.0%	29.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	98.4%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	18.9%
1.5-2°C	14.2%
2-3°C	16.3%
>3°C	50.6%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	29
Number of Voted Meetings	27
Participation rate at General Meetings	93.1%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	97.2%	2.8%	0.0%
Non-Salary Comp.	96.2%	3.8%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%
Shareholders Proposals	50.0%	0.0%	50.0%
Routine/Business	80.0%	20.0%	0.0%
Capitalization	88.2%	11.8%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor DAX (DR) UCITS ETF fund participated during the financial year.

Germany	96.3%
Ireland	3.7%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	14
Number of engagement	21
Number of companies under engagement / Number of companies in the fund	40%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Germany	81%
Ireland	10%
Netherlands	10%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

ESG	57%
Plastic & Circular Economy	14%
Corporate Governance Roadshow	10%
General Meeting	10%
Climate Action 100+	10%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Daily LevDAX UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)**1. Description of ESG criteria**

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.6	6.5	5.6	5.1

Portfolio rated 100%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 32%
Yellow Flag 37%
Green Flag 28%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
203	165	272	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	98%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0014
Oil (MMBOE)	0.0006

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	243.4
Gas	445.5
Total	689.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	689.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.6%	4.8%	24.8%
Some efforts	94.1%	92.6%	70.8%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	3.4%	2.6%	4.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	6.2
Operational Transition	13.1%
Production Transition	13.1%
Neutral	74.7%
Solutions	0.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	1.6%	Liquid Fuel	Natural Gas	30.9%	Nuclear
	21.1%	Renewables	Thermal Coal	26.7%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	30%
20-49.9%	12%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.3%	Energy Efficiency	39.0%	Green Building	0.0%
Pollution Prevention	7.1%	Sustainable Water	9.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	4.1%	Green Building	0.0%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

4.2%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	2%
Heatwave	8%
Hurricane	3%
WaterStress	41%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.5%	74.8%	23.8%	92.9%	4.9%	2.2%
Carbon Emissions	0.9%	41.4%	57.6%	69.0%	17.9%	13.2%
Electronic Waste	2.5%	15.1%	82.4%	100.0%		
Opportunities in Green Building	1.2%	53.4%	45.4%	97.6%	2.4%	
Opp's in Renewable Energy	1.5%	93.1%	5.4%	97.4%	1.2%	1.4%
Packaging Material & Waste	9.3%	46.3%	44.5%	89.3%		10.7%
Water Stress	6.8%	90.5%	2.8%	52.1%	30.6%	17.3%
Toxic Emissions & Waste				45.3%	25.0%	29.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	98.4%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	18.9%
1.5-2°C	14.2%
2-3°C	16.3%
>3°C	50.6%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor S&P 500 UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.1	6.2	4.9	4.8

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 1%
Orange Flag 39%
Yellow Flag 26%
Green Flag 33%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
33	131	132	Scope 1 reported (vs estimated)	93%
			Scope2 reported (vs estimated)	83%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	2%
Natural Gaz	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0006
Oil (MMBOE)	0.0008

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.6
Oil	347.0
Gas	133.4
Total	545.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.6
Oil Sands	26.1
Shale Oil or Shale Gas	171.0
Sum High Impact Reserves	197.7
Other	347.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.1%	5.3%	3.9%
Some efforts	81.8%	91.1%	72.8%
Limited efforts/Information	4.7%	1.4%	3.3%
No effort/No evidence	6.2%	2.2%	19.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.3
Low carbon transition management Score	5.5
Operational Transition	4.5%
Production Transition	4.5%
Neutral	79.2%
Solutions	10.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	1.8%	Liquid Fuel	0.2%	Natural Gas	35.8%
Nuclear	28.9%	Renewables	11.7%	Thermal Coal	21.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	11%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	9.2%	Energy Efficiency	34.7%	Green Building	1.7%
Pollution Prevention	5.0%	Sustainable Water	3.7%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.5%	Energy Efficiency	5.4%	Green Building	0.2%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	32.2%	67.2%	89.8%	7.4%	2.8%
Carbon Emissions	0.5%	26.7%	72.8%	79.9%	16.7%	3.4%
Electronic Waste	0.9%	6.7%	92.4%	92.5%	0.6%	6.9%
Opportunities in Green Building	0.5%	38.0%	61.4%	98.6%	0.7%	0.6%
Opp's in Renewable Energy	1.9%	92.8%	5.2%	97.9%	1.0%	1.1%
Packaging Material & Waste	6.9%	82.7%	10.4%	89.0%		10.9%
Water Stress	4.6%	93.5%	1.9%	65.4%	27.8%	6.7%
Toxic Emissions & Waste				59.0%	32.3%	8.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.5°C
Coverage	98.7%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	32.0%
1.5-2°C	18.3%
2-3°C	12.4%
>3°C	37.1%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Australia (S&P/ASX 200) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 6%
Orange Flag 25%
Yellow Flag 14%
Green Flag 54%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
90	344	217	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	93%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	14%
Thermal Coal	7%
Natural Gaz	12%
Oil	12%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	1 574
Gas (MMBOE)	0.0009
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	2 007.5
Thermal Coal	2 875.8
Oil	89.4
Gas	180.5
Total	5 251.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	2 875.8
Oil Sands	0.0
Shale Oil or Shale Gas	98.0
Sum High Impact Reserves	2 973.8
Other	2 277.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	5.8%	10.4%
Some efforts	75.0%	85.7%	61.2%
Limited efforts/Information	7.4%	8.5%	2.2%
No effort/No evidence	17.4%	0.0%	26.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	4.8
Operational Transition	9.9%
Production Transition	9.9%
Neutral	77.4%
Solutions	0.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.3%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	0.8%	Liquid Fuel	0.0%	Natural Gas	12.3%
Nuclear		Renewables	8.3%	Thermal Coal	78.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	10%
20-49.9%	2%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	2.8%	Energy Efficiency	7.2%	Green Building	6.6%
Pollution Prevention	3.0%	Sustainable Water	1.3%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.2%	Energy Efficiency	0.2%	Green Building	1.2%
Pollution Prevention	0.4%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	20%
Flood	3%
Heatwave	6%
Hurricane	3%
WaterStress	45%
Wildfire	22%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.5%	87.4%	12.1%	75.0%	8.3%	16.9%
Carbon Emissions	0.4%	17.2%	82.4%	67.6%	26.0%	6.6%
Electronic Waste	3.4%	5.9%	90.7%	99.7%	0.4%	0.0%
Opportunities in Green Building	0.4%	16.1%	83.5%	95.2%	2.6%	2.4%
Opp's in Renewable Energy	5.8%	92.4%	1.8%	99.6%	0.2%	0.4%
Packaging Material & Waste	8.9%	84.6%	6.4%	94.8%		5.3%
Water Stress	8.0%	85.8%	6.2%	51.5%	29.9%	18.7%
Toxic Emissions & Waste				59.2%	17.0%	23.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	92.7%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	11.7%
1.5-2°C	13.4%
2-3°C	22.0%
>3°C	52.9%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Utilities TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.5	7.3	6.1	5.7

Portfolio rated 100%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	9%
Yellow Flag	24%
Green Flag	66%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
427	1 552	1 810	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	72%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	18%
Thermal Coal	13%
Natural Gaz	7%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1.5
Gas	9.6
Total	69.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	58.2
Sum High Impact Reserves	58.2
Other	11.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	19.1%	3.7%	5.5%
Some efforts	66.4%	94.4%	26.4%
Limited efforts/Information	5.3%	0.8%	65.4%
No effort/No evidence	0.8%	0.0%	2.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	4.4
Low carbon transition management Score	6.1
Operational Transition	52.3%
Production Transition	52.3%
Neutral	7.8%
Solutions	7.5%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	6.6%	Liquid Fuel	0.7%	Natural Gas	38.8%
Nuclear	23.3%	Renewables	11.9%	Thermal Coal	18.7%

Share of issuers in terms of power generation in portfolio	91.0%
--	-------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	90.7%	Energy Efficiency	37.7%
Pollution Prevention	2.9%	Sustainable Water	8.6%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	62%
20-49.9%	21%
50-100%	4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	9.9%	Energy Efficiency	2.0%
Pollution Prevention	0.1%	Sustainable Water	1.0%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	27%
Flood	3%
Heatwave	8%
Hurricane	8%
WaterStress	36%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.8%	30.8%	68.4%	54.6%	41.6%	3.8%
Carbon Emissions	1.0%	12.3%	86.7%	57.5%	34.9%	7.6%
Electronic Waste	0.9%	3.3%	95.8%	100.0%		
Opportunities in Green Building	2.7%	12.8%	84.5%	100.0%	0.0%	
Opp's in Renewable Energy	2.0%	89.3%	8.7%	29.2%	32.9%	37.9%
Packaging Material & Waste	6.1%	70.0%	23.9%	100.0%		
Water Stress	36.9%	52.5%	10.6%	62.3%	1.2%	36.5%
Toxic Emissions & Waste				23.3%	57.8%	18.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	1.6°C
Coverage	99.2%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	46.4%
1.5-2°C	4.6%
2-3°C	28.7%
>3°C	20.4%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Materials TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

284	688	648	Scope 1 reported (vs estimated)	95%
			Scope2 reported (vs estimated)	96%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	20%
Thermal Coal	13%
Natural Gaz	15%
Oil	14%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	714
Gas (MMBOE)	0.0005
Oil (MMBOE)	0.0004

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	3 222.1
Thermal Coal	1 304.3

Gas	174.7
Total	4 904.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1 304.3
Oil Sands	63.6
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	1 367.9
Other	3 536.2

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.4%	21.9%	55.6%
Some efforts	81.3%	75.3%	22.9%
Limited efforts/Information	10.9%	2.8%	11.3%
No effort/No evidence	2.4%	0.0%	10.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.2
Low carbon transition management Score	5.8
Operational Transition	49.9%
Production Transition	49.9%
Neutral	32.2%
Solutions	0.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.2%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	6%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	17.0%	Energy Efficiency	20.7%
Pollution Prevention	29.8%	Sustainable Water	24.5%
		Green Building	1.0%
		Sustainable Agriculture	3.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.4%	Energy Efficiency	0.5%
Pollution Prevention	2.9%	Sustainable Water	0.6%
		Green Building	0.0%
		Sustainable Agriculture	0.9%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	27%
Flood	4%
Heatwave	9%
Hurricane	5%
WaterStress	37%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.5%	63.6%	33.0%	40.4%	29.5%	30.0%
Carbon Emissions	4.6%	36.2%	59.1%	15.7%	52.4%	31.9%
Electronic Waste	10.1%	10.7%	79.2%	100.0%	0.0%	0.0%
Opportunities in Green Building	5.0%	39.4%	55.6%	99.8%	0.2%	
Opp's in Renewable Energy	5.8%	85.6%	8.6%	99.8%		0.2%

Water Stress	16.3%	74.1%	9.6%	1.3%	25.0%	73.6%
Toxic Emissions & Waste				6.2%	25.9%	67.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	92.5%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	10.3%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	23.4%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	7.9%
-------	------

Alignment is measured using a temperature indicator.

>3°C	58.4%
------	-------

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Communication Services TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
4.4	8.0	4.7	3.2

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Communication Services	2.0%	6.3%	14.8%	37.7%	19.4%	19.5%	0.4%		8%	72%	20%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag	0%
Orange Flag	59%
Yellow Flag	30%
Green Flag	12%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
4	18	13	Scope 1 reported (vs estimated)	89%
			Scope2 reported (vs estimated)	90%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	48.9%	33.1%	0.0%
Some efforts	41.0%	60.4%	87.4%
Limited efforts/Information	1.7%	1.4%	0.0%
No effort/No evidence	8.4%	5.1%	12.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.3
Low carbon transition management Score	6.1
Operational Transition	0.0%
Production Transition	0.0%
Neutral	97.7%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	39%
20-49.9%	0%
50-100%	0%

Hurricane	4%
WaterStress	48%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.8%	38.2%	61.1%	99.4%	0.6%	
Carbon Emissions	0.2%	26.9%	72.9%	96.4%	3.6%	
Electronic Waste	0.8%	12.5%	86.6%	99.2%		0.8%
Opportunities in Green Building	0.3%	42.8%	56.8%	99.9%	0.1%	
Opp's in Renewable Energy	1.2%	93.2%	5.5%	100.0%		
Packaging Material & Waste	3.7%	70.2%	26.1%	100.0%		0.0%
Water Stress	3.9%	95.4%	0.8%	98.6%	1.4%	
Toxic Emissions & Waste				90.6%	9.4%	0.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	1.7°C
Coverage	96.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	58.8%
1.5-2°C	10.0%
2-3°C	5.3%
>3°C	25.9%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Information Technology TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.5	5.6	5.8	5.0

Portfolio rated 100%
Nb Securities rated 191

				Political Governance	0.0	0.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Information Technology	28.7%	19.1%	15.9%	30.1%	4.9%	1.2%	0.2%		48%	51%	1%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	25%
Yellow Flag	29%
Green Flag	46%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
4	27	21	Scope 1 reported (vs estimated)	92%
			Scope2 reported (vs estimated)	70%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.1%	1.4%	0.0%
Some efforts	84.0%	88.6%	78.7%
Limited efforts/Information	3.9%	2.6%	0.0%
No effort/No evidence	12.0%	7.5%	21.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	4.9
Operational Transition	1.0%
Production Transition	1.0%
Neutral	76.2%
Solutions	21.9%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	21%
20-49.9%	26%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	2.8%	Energy Efficiency	49.6%	Green Building	0.0%
Pollution Prevention	0.2%	Sustainable Water	2.6%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.2%	Energy Efficiency	8.1%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	21%
Flood	2%
Heatwave	7%
Hurricane	4%
WaterStress	49%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.6%	34.0%	63.4%	94.6%	5.4%	
Carbon Emissions	0.0%	30.6%	69.4%	77.8%	22.2%	0.0%
Electronic Waste	1.1%	8.9%	90.0%	80.0%	0.2%	19.8%
Opportunities in Green Building	0.3%	55.3%	44.4%	100.0%		
Opp's in Renewable Energy	4.6%	82.1%	13.3%	100.0%		
Packaging Material & Waste	11.8%	72.3%	15.9%	99.7%		0.3%
Water Stress	7.3%	88.9%	3.7%	78.3%	21.6%	0.0%
Toxic Emissions & Waste				65.7%	34.1%	0.2%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	1.6°C
Coverage	96.6%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	20.0%
1.5-2°C	12.4%
2-3°C	11.9%
>3°C	55.7%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

Lyxor MSCI World Health Care TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.2	7.1	4.9	5.1

Portfolio rated 100%
Nb Securities rated 154

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Health Care	4.9%	17.9%	28.8%	25.7%	16.7%	5.9%	0.1%		23%	71%	6%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	47%
Yellow Flag	17%
Green Flag	35%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
4	11	20	Scope 1 reported (vs estimated)	90%
			Scope2 reported (vs estimated)	66%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.5%	0.0%	0.0%
Some efforts	84.4%	94.9%	82.9%
Limited efforts/Information	6.4%	1.6%	0.0%
No effort/No evidence	6.7%	3.5%	17.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	6.0
Operational Transition	0.0%
Production Transition	0.0%
Neutral	99.6%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	6%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%	Energy Efficiency	3.8%	Green Building	0.0%
Pollution Prevention	2.7%	Sustainable Water	3.3%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.0%	Energy Efficiency	0.1%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	24%
Flood	3%
Heatwave	7%
Hurricane	5%
WaterStress	46%
Wildfire	13%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.3%	41.3%	57.3%	99.0%	0.6%	0.4%
Carbon Emissions	0.2%	34.4%	65.4%	98.3%	1.4%	0.3%
Electronic Waste	0.2%	5.4%	94.5%	99.9%		0.1%
Opportunities in Green Building	0.2%	34.4%	65.4%	100.0%		
Opp's in Renewable Energy	1.0%	91.6%	7.4%	100.0%		
Packaging Material & Waste	6.1%	76.9%	17.0%	65.9%		34.1%
Water Stress	2.3%	97.2%	0.5%	41.5%	57.4%	1.1%
Toxic Emissions & Waste				25.7%	73.7%	0.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	1.8°C
Coverage	96.5%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	25.2%
1.5-2°C	34.3%
2-3°C	21.8%
>3°C	18.7%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Industrials TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)**1. Description of ESG criteria**

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%
 Orange Flag 19%
 Yellow Flag 23%
 Green Flag 56%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
35	87	113	Scope 1 reported (vs estimated)	97%
			Scope2 reported (vs estimated)	91%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	4%
Natural Gaz	3%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	35
Gas (MMBOE)	0.0001
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	245.9
Thermal Coal	63.9
Oil	16.7
Gas	30.2
Total	361.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	63.9
Oil Sands	5.5
Shale Oil or Shale Gas	5.6
Sum High Impact Reserves	75.0
Other	286.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.6%	0.0%	8.3%
Some efforts	82.9%	93.6%	75.6%
Limited efforts/Information	7.7%	4.5%	0.3%
No effort/No evidence	7.8%	1.9%	15.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.3
Operational Transition	4.9%
Production Transition	4.9%
Neutral	75.7%
Solutions	6.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	1.0%	Liquid Fuel	Natural Gas	Nuclear
Renewables	94.5%	Thermal Coal	4.5%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	38%
20-49.9%	4%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	26.8%	Energy Efficiency	47.8%	Green Building	3.8%
Pollution Prevention	21.0%	Sustainable Water	20.6%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.4%	Energy Efficiency	3.0%	Green Building	0.2%
Pollution Prevention	0.5%	Sustainable Water	0.6%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	25%
Flood	2%
Heatwave	8%
Hurricane	6%
WaterStress	42%
Wildfire	14%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.4%	54.2%	43.4%	81.2%	18.7%	0.1%
Carbon Emissions	0.9%	27.8%	71.3%	76.6%	21.8%	1.6%
Electronic Waste	1.9%	5.6%	92.6%	93.1%	4.3%	2.5%
Opportunities in Green Building	1.6%	34.5%	63.9%	99.3%	0.6%	0.1%
Opp's in Renewable Energy	2.1%	85.2%	12.7%	99.9%		0.1%
Packaging Material & Waste	7.0%	67.9%	25.1%	95.6%		4.4%
Water Stress	7.8%	90.8%	1.4%	43.7%	52.5%	3.8%
Toxic Emissions & Waste				28.6%	51.9%	19.5%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.3°C
Coverage	94.1%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	21.5%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	19.5%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	21.5%
-------	-------

Alignment is measured using a temperature indicator.

>3°C	37.4%
------	-------

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Energy TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.3	4.7	6.1	5.3

Portfolio rated 100%
 Nb Securities rated 51

Energy	5.4%	16.8%	34.0%	40.2%	2.6%	1.0%			22%	77%	1%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	9%
Orange Flag	39%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
299	516	631	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	98%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	79%
Thermal Coal	1%
Natural Gaz	79%
Oil	79%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	181
Gas (MMBOE)	0.0223
Oil (MMBOE)	0.0345

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	3.8
Thermal Coal	331.2
Oil	16 517.2
Gas	5 802.4
Total	24 068.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	331.2
Oil Sands	6 100.2
Shale Oil or Shale Gas	3 433.0
Sum High Impact Reserves	9 864.4
Other	14 203.6

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	10.1%	16.6%	45.4%
Some efforts	78.5%	81.9%	13.0%
Limited efforts/Information	8.5%	1.5%	38.9%
No effort/No evidence	2.9%	0.0%	2.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	2.6
Low carbon transition management Score	6.0
Operational Transition	0.0%
Production Transition	0.0%
Neutral	0.4%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)			
Hydro	2.6%	Liquid Fuel	Natural Gas
Renewables	4.8%	Thermal Coal	Nuclear
	0.0%		92.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	36%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	39.9%	Energy Efficiency	12.9%
Pollution Prevention	11.9%	Sustainable Water	2.3%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	1.7%	Energy Efficiency	0.2%
Pollution Prevention	0.4%	Sustainable Water	0.0%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	26%
Flood	2%
Heatwave	8%
Hurricane	6%
WaterStress	36%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	5.1%	55.6%	39.3%	5.4%	21.1%	73.5%
Carbon Emissions	6.2%	31.7%	62.2%	4.0%	30.7%	65.3%
Electronic Waste	11.3%	8.1%	80.7%	100.0%		
Opportunities in Green Building	5.4%	32.4%	62.2%	100.0%		
Opp's in Renewable Energy	12.9%	85.3%	1.8%	97.8%		2.2%
Packaging Material & Waste	20.7%	72.0%	7.3%	100.0%		0.0%
Water Stress	22.1%	73.1%	4.9%	14.2%	77.0%	8.8%
Toxic Emissions & Waste				4.7%	10.8%	84.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	100.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,
- An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

<1.5°C	3.5%
1.5-2°C	5.9%
2-3°C	3.1%
>3°C	87.6%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Financials TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated
Financials	6.2%	38.4%	27.6%	13.4%	11.3%	2.1%	0.2%	

Leaders (AAA,AA)	45%
Average (A, BBB, BB)	52%
Laggards (B, CCC)	2%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	23%
Yellow Flag	33%
Green Flag	41%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
6	20	18	Scope 1 reported (vs estimated)	5%
			Scope2 reported (vs estimated)	49%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	7%
Thermal Coal	5%
Natural Gaz	3%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	1
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	2.3
Oil	0.0
Gas	0.0
Total	2.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	2.3
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	2.3
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.9%	1.4%	0.0%
Some efforts	81.3%	94.6%	79.1%
Limited efforts/Information	3.6%	2.8%	0.0%
No effort/No evidence	13.2%	1.2%	20.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.1
Operational Transition	0.0%
Production Transition	0.0%
Neutral	97.7%
Solutions	0.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	9.3%	Liquid Fuel	Natural Gas	26.0%	Nuclear
Renewables	3.2%	29.8%	Thermal Coal	31.8%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	2%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	7.3%	Energy Efficiency	6.1%	Green Building	1.4%
Pollution Prevention	5.2%	Sustainable Water	1.0%	Sustainable Agriculture	0.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.1%	Energy Efficiency	0.0%	Green Building	0.1%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	6%
WaterStress	45%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.5%	56.0%	40.4%	99.1%	0.7%	0.2%
Carbon Emissions	0.4%	26.9%	72.7%	96.9%	3.0%	0.1%
Electronic Waste	2.4%	6.5%	91.0%	100.0%		0.0%
Opportunities in Green Building	3.0%	27.3%	69.8%	99.6%	0.3%	0.1%
Opp's in Renewable Energy	3.3%	87.8%	8.9%	99.6%	0.1%	0.3%
Packaging Material & Waste	8.9%	67.8%	23.3%	99.0%		1.0%
Water Stress	15.5%	81.1%	3.4%	98.0%	1.8%	0.2%
Toxic Emissions & Waste				97.9%	1.8%	0.3%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	97.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	36.9%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	27.4%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	7.4%
-------	------

Alignment is measured using a temperature indicator.

>3°C	28.3%
------	-------

For more information on the methodology applied by LYXOR:

Lyxor MSCI World Consumer Discretionary TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.0	6.5	4.3	4.9

Portfolio rated	100%
Nb Securities rated	170

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight
Environment		6.5	19.3%		0.0	0.0%
	Climat Change	7.0	9.7%	Environmental Externalities	0.0	0.0%
	Environmental Opportunities	6.4	4.1%	Natural Resource	0.0	0.0%
	Natural Capital	5.9	4.1%			
	Pollution & Waste	5.0	1.4%			
Social		4.3	44.3%		0.0	0.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated
Consumer Discretionary	5.9%	17.8%	30.3%	35.2%	5.8%	4.3%	0.3%	

Leaders (AAA,AA)	24%
Average (A, BBB, BB)	71%
Laggards (B, CCC)	5%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	45%
Yellow Flag	29%
Green Flag	25%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
11	32	38	Scope 1 reported (vs estimated)	91%
			Scope2 reported (vs estimated)	85%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.5%	0.4%	0.9%
Some efforts	88.8%	93.7%	53.8%
Limited efforts/Information	2.5%	2.7%	0.2%
No effort/No evidence	8.1%	3.2%	45.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	4.9
Operational Transition	1.1%
Production Transition	1.1%
Neutral	75.1%
Solutions	11.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	2.5%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	7.9%	Liquid Fuel	Natural Gas	Nuclear
Renewables	92.1%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	30%
20-49.9%	4%
50-100%	12%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	16.9%	Energy Efficiency	47.9%	Green Building	1.4%
Pollution Prevention	1.9%	Sustainable Water	0.5%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	13.4%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	26%
Flood	2%
Heatwave	8%
Hurricane	7%
WaterStress	39%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.5%	47.1%	51.4%	99.0%	1.0%	
Carbon Emissions	0.9%	23.9%	75.2%	91.2%	8.2%	0.5%
Electronic Waste	0.4%	3.5%	96.1%	96.8%	1.1%	2.1%
Opportunities in Green Building	1.1%	33.1%	65.8%	97.9%	2.1%	
Opp's in Renewable Energy	0.8%	89.1%	10.1%	100.0%		
Packaging Material & Waste	6.7%	77.5%	15.8%	89.4%		10.6%
Water Stress	4.5%	94.4%	1.2%	56.5%	39.6%	3.9%
Toxic Emissions & Waste				59.7%	19.7%	20.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	1.8°C
Coverage	96.5%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	38.8%
1.5-2°C	19.2%
2-3°C	9.2%
>3°C	32.8%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.2	5.9	4.7	5.2

Portfolio rated	100%
Nb Securities rated	111

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

	Stakeholder Opposition	6.2	0.2%			
Governance		5.2	33.7%		0.0	0.0%
				Financial Governance	0.0	0.0%
				Political Governance	0.0	0.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated
Consumer Staples	10.8%	41.3%	16.5%	29.6%	0.8%	1.0%		

Leaders (AAA,AA)	52%
Average (A, BBB, BB)	47%
Laggards (B, CCC)	1%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	45%
Yellow Flag	20%
Green Flag	34%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
24	50	48	Scope 1 reported (vs estimated)	96%
			Scope2 reported (vs estimated)	90%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.3%	0.0%	1.0%
Some efforts	97.7%	99.8%	89.7%
Limited efforts/Information	1.8%	0.2%	0.0%
No effort/No evidence	0.3%	0.0%	9.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	7.2
Operational Transition	16.5%
Production Transition	16.5%
Neutral	75.6%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	100.0%	Liquid Fuel	Natural Gas	Nuclear
Renewables	0.0%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	2%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	1.2%	Energy Efficiency	5.6%	Green Building	0.6%
Pollution Prevention	0.5%	Sustainable Water	0.0%	Sustainable Agriculture	1.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

0.1%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	5%
WaterStress	41%
Wildfire	14%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.2%	61.9%	34.9%	78.9%	17.8%	3.2%
Carbon Emissions	0.5%	40.6%	58.9%	75.6%	24.3%	0.1%
Electronic Waste	1.0%	12.1%	86.8%	100.0%		0.0%
Opportunities in Green Building	1.0%	41.7%	57.2%	100.0%	0.0%	
Opp's in Renewable Energy	2.8%	89.2%	7.9%	100.0%		0.0%
Packaging Material & Waste	8.2%	70.9%	20.9%	14.8%		85.2%
Water Stress	9.2%	88.7%	2.1%	21.7%	24.5%	53.8%
Toxic Emissions & Waste				39.3%	60.5%	0.2%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.7°C
Coverage	99.3%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	11.6%
1.5-2°C	11.2%
2-3°C	23.5%
>3°C	53.7%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor S&P 500 VIX Futures Enhanced Roll UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 26%
Yellow Flag 27%
Green Flag 48%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
223	632	814	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	12%
Thermal Coal	5%
Natural Gaz	8%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0006
Oil (MMBOE)	0.0005

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	71.5
Thermal Coal	0.0
Oil	236.7
Gas	199.1
Total	514.6

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	24.5
Shale Oil or Shale Gas	25.3
Sum High Impact Reserves	49.8
Other	464.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	9.4%	2.6%	14.1%
Some efforts	78.1%	96.2%	56.3%
Limited efforts/Information	4.0%	1.2%	24.7%
No effort/No evidence	2.8%	0.0%	4.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.2
Low carbon transition management Score	6.0
Operational Transition	22.8%
Production Transition	22.8%
Neutral	54.8%
Solutions	4.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	4.0%	Liquid Fuel	0.6%	Natural Gas	37.7%
Nuclear	21.2%	Renewables	12.3%	Thermal Coal	24.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	35%
20-49.9%	7%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	36.8%	Energy Efficiency	20.9%	Green Building	2.7%
Pollution Prevention	6.5%	Sustainable Water	9.3%	Sustainable Agriculture	2.8%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	2.8%	Energy Efficiency	0.9%	Green Building	0.0%
Pollution Prevention	0.3%	Sustainable Water	1.2%	Sustainable Agriculture	0.3%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

5.3%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	28%
Flood	3%
Heatwave	8%
Hurricane	5%
WaterStress	39%
Wildfire	14%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.0%	59.7%	37.3%	63.2%	27.3%	9.5%
Carbon Emissions	1.0%	23.6%	75.4%	63.4%	29.3%	7.3%
Electronic Waste	1.8%	4.6%	93.6%	98.4%	1.3%	0.4%
Opportunities in Green Building	2.4%	22.7%	74.9%	97.1%	2.8%	
Opp's in Renewable Energy	3.1%	83.7%	13.2%	76.2%	13.1%	10.7%
Packaging Material & Waste	7.4%	57.6%	35.0%	78.9%		21.1%
Water Stress	27.4%	68.4%	4.2%	47.5%	20.4%	32.1%
Toxic Emissions & Waste				32.3%	50.0%	17.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.3°C
Coverage	97.5%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	24.9%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	13.0%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	17.8%
-------	-------

Alignment is measured using a temperature indicator.

>3°C	44.3%
------	-------

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor S&P Eurozone ESG Dividend Aristocrats (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 10%
Yellow Flag 27%
Green Flag 63%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
131	226	198	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	4.9%	3.0%	16.7%
Some efforts	90.1%	96.0%	68.9%
Limited efforts/Information	5.0%	0.9%	2.1%
No effort/No evidence	0.0%	0.0%	12.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	6.1
Operational Transition	6.7%
Production Transition	6.7%
Neutral	73.4%
Solutions	5.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)						
Hydro	19.9%	Liquid Fuel		Natural Gas	45.5%	Nuclear
	17.1%	Renewables	4.9%	Thermal Coal	12.5%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	20%
20-49.9%	17%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	27.8%	Energy Efficiency	26.2%	Green Building	6.7%
Pollution Prevention	13.2%	Sustainable Water	7.9%	Sustainable Agriculture	4.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.2%	Energy Efficiency	2.2%	Green Building	0.8%
Pollution Prevention	0.2%	Sustainable Water	0.2%	Sustainable Agriculture	0.9%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	33%
Flood	3%
Heatwave	8%
Hurricane	2%
WaterStress	43%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	5.0%	81.0%	14.0%	79.9%	12.5%	7.6%
Carbon Emissions	0.4%	50.7%	48.8%	68.6%	26.8%	4.7%
Electronic Waste	2.9%	11.9%	85.2%	100.0%		
Opportunities in Green Building	0.6%	54.0%	45.5%	100.0%	0.0%	
Opp's in Renewable Energy	2.9%	88.4%	8.7%	94.7%		5.3%
Packaging Material & Waste	10.0%	40.0%	50.1%	74.7%		25.3%
Water Stress	18.9%	77.8%	3.4%	37.0%	41.4%	21.6%
Toxic Emissions & Waste				38.6%	44.3%	17.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.7°C
Coverage	96.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	7.4%
--------	------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	18.6%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	27.8%
-------	-------

Alignment is measured using a temperature indicator.

>3°C	46.2%
------	-------

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	40
Number of Voted Meetings	15
Participation rate at General Meetings	37.5%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	92.5%	7.5%	0.0%
Directors Related	91.5%	8.5%	0.0%
Non-Salary Comp.	93.1%	6.9%	0.0%
Capitalization	97.4%	2.6%	0.0%
Shareholders Proposals	75.0%	25.0%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%
Antitakeover Related	100.0%	0.0%	0.0%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor S&P Eurozone ESG Dividend Aristocrats (DR) UCITS ETF fund participated during the financial year.

Finland	13.3%
Germany	20.0%
Netherlands	13.3%
Spain	20.0%
France	6.7%
Italy	6.7%
United Kingdom	20.0%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting, Plastic & Circular Economy

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	8
Number of engagement	11
Number of companies under engagement / Number of companies in the fund	21%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

France	45%
Germany	27%
Spain	18%
Finland	9%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Responsible Cleantech	9%
General Meeting	18%
ESG	36%
Corporate Governance Roadshow	36%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor iBoxx EUR Liquid High Yield BB UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)**1. Description of ESG criteria**

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.0	6.5	4.8	4.7

Portfolio rated **97%**

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag **10%**
 Orange Flag **23%**
 Yellow Flag **28%**
 Green Flag **39%**

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	97%
132	244	90	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	100%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.6%	7.7%	0.0%
Some efforts	88.4%	84.2%	92.4%
Limited efforts/Information	0.0%	5.1%	0.0%
No effort/No evidence	9.1%	2.9%	7.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.5
Low carbon transition management Score	5.2
Operational Transition	13.4%
Production Transition	13.4%
Neutral	64.4%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	10.6%	Energy Efficiency	37.9%	Green Building	0.0%
Pollution Prevention	5.1%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.2%	Energy Efficiency	2.1%	Green Building	0.0%
Pollution Prevention	0.4%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	28%
Flood	3%
Heatwave	8%
Hurricane	3%
WaterStress	50%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	90.8%	8.6%	87.5%	12.5%	
Carbon Emissions	0.5%	60.7%	38.7%	90.8%	4.0%	5.2%
Electronic Waste	1.0%	4.5%	94.6%	100.0%		
Opportunities in Green Building	1.1%	63.8%	35.2%	100.0%	0.0%	
Opp's in Renewable Energy	1.4%	63.2%	35.4%	100.0%		
Packaging Material & Waste	4.5%	32.1%	63.4%	88.4%		11.6%
Water Stress	7.9%	83.6%	8.5%	58.5%	35.9%	5.7%
Toxic Emissions & Waste				49.5%	27.8%	22.7%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Pacific Ex Japan UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 5%
 Orange Flag 21%
 Yellow Flag 17%
 Green Flag 57%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	14%
Thermal Coal	8%
Natural Gaz	11%
Oil	11%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	344
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1 181.6
Thermal Coal	628.9
Oil	87.7
Gas	132.4
Total	2 110.9

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	628.9
Oil Sands	18.4
Shale Oil or Shale Gas	80.3
Sum High Impact Reserves	727.5
Other	1 383.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.3%	4.9%	9.1%
Some efforts	71.9%	89.3%	63.2%
Limited efforts/Information	7.9%	3.1%	5.4%
No effort/No evidence	18.8%	2.3%	22.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers’ carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	4.9
Operational Transition	7.5%
Production Transition	7.5%
Neutral	78.8%
Solutions	1.1%

Energy Mix of energy producers within the portfolio

The company’s fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	11.3%	Liquid Fuel	0.0%	Natural Gas	21.0%
Nuclear	8.8%	Renewables	6.9%	Thermal Coal	51.9%

Share of issuers in terms of power generation in portfolio	3.5%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio’s exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.3%	Energy Efficiency	8.3%	Green Building	11.4%
Pollution Prevention	3.0%	Sustainable Water	2.9%	Sustainable Agriculture	0.3%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	13%
20-49.9%	3%
50-100%	3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world’s major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer’s percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.3%	Energy Efficiency	0.5%	Green Building	3.0%
Pollution Prevention	0.2%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	18%
Flood	2%
Heatwave	8%
Hurricane	12%
WaterStress	42%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.5%	77.1%	16.4%	81.7%	6.9%	11.4%
Carbon Emissions	1.1%	30.2%	68.7%	71.8%	22.7%	5.5%
Electronic Waste	10.4%	6.3%	83.3%	99.8%	0.2%	
Opportunities in Green Building	14.0%	28.4%	57.6%	92.0%	4.2%	3.8%
Opp's in Renewable Energy	10.9%	69.1%	19.9%	97.9%	0.9%	1.3%
Packaging Material & Waste	34.7%	59.2%	6.1%	95.7%		4.3%
Water Stress	10.1%	78.9%	11.0%	57.5%	30.0%	12.5%
Toxic Emissions & Waste				69.2%	14.4%	16.4%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	94.9%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	20.1%
1.5-2°C	11.0%
2-3°C	22.9%
>3°C	46.1%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Fed Funds US Dollar Cash UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
4.8	4.2	5.0	5.0

Portfolio rated 98%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 0%
 Yellow Flag 23%
 Green Flag 71%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

167	593	469	Scope 1 reported (vs estimated)	83%
			Scope2 reported (vs estimated)	84%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	1 456
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0007

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	2 659.0
Oil	280.3
Gas	53.1
Total	2 992.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	2 659.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	2 659.0
Other	333.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.2%	1.6%	6.2%
Some efforts	78.4%	77.5%	32.2%
Limited efforts/Information	10.6%	14.8%	0.0%
No effort/No evidence	8.8%	6.1%	61.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	4.2
Low carbon transition management Score	3.2
Operational Transition	24.8%
Production Transition	24.8%
Neutral	40.0%
Solutions	2.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	4.3%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
100.0%	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	4%
20-49.9%	2%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	2.2%	Energy Efficiency	11.4%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.2%	Energy Efficiency	0.6%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	22%
Flood	2%
Heatwave	10%
Hurricane	2%
WaterStress	55%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	38.9%	56.5%	4.7%	58.9%	6.2%	34.9%
Carbon Emissions	52.7%	41.4%	5.9%	56.8%	37.2%	6.0%
Electronic Waste	78.1%	5.5%	16.4%	100.0%		
Opportunities in Green Building	52.4%	42.6%	4.9%	100.0%		
Opp's in Renewable Energy	46.9%	52.5%	0.6%	97.7%		2.3%
Packaging Material & Waste	83.5%	10.0%	6.5%	97.7%		2.3%
Water Stress	29.3%	42.8%	27.9%	56.6%	4.3%	39.1%
Toxic Emissions & Waste				56.5%	5.1%	38.4%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.4°C
Coverage	83.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,
- An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

<1.5°C	7.7%
1.5-2°C	21.7%
2-3°C	5.2%
>3°C	65.5%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor Euro Government Bond 5-7Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		31.9%	28.5%	39.7%					32%	68%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	211	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **52.0**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.3**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **364.4**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **94%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	22%	78%
IEA SDS 1.65/1.8°C	54%	46%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	205	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

Lyxor Euro Government Bond 15+Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		70.8%	29.2%						71%	29%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	203	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **54.7**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.5**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **359.6**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **100%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	5%	95%
IEA SDS 1.65/1.8°C	68%	32%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor S&P 500 Daily (-2x) Inverse UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	39%
Yellow Flag	26%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%
Some efforts	0.0%	0.0%
Limited efforts/Information	0.0%	0.0%
No effort/No evidence	0.0%	0.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	0.0
Low carbon transition management Score	0.0
Operational Transition	0.0%
Production Transition	0.0%
Neutral	0.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	3.8%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	32.2%	67.2%	89.8%	7.4%	2.8%
Carbon Emissions	0.5%	26.7%	72.8%	79.9%	16.7%	3.4%
Electronic Waste	0.9%	6.7%	92.4%	92.5%	0.6%	6.9%
Opportunities in Green Building	0.5%	38.0%	61.4%	98.6%	0.7%	0.6%
Opp's in Renewable Energy	1.9%	92.8%	5.2%	97.9%	1.0%	1.1%
Packaging Material & Waste	6.9%	82.7%	10.4%	89.0%		10.9%
Water Stress	4.6%	93.5%	1.9%	65.4%	27.8%	6.7%
Toxic Emissions & Waste				59.0%	32.3%	8.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	null
Coverage	98.7%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	32.0%
1.5-2°C	18.3%
2-3°C	12.4%
>3°C	37.1%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor EUR 2-10Y Inflation Expectations UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Financials		32.1%	67.9%						32%	68%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

0	0	181	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Lyxor US Treasury 1-3Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **100%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor US Treasury 10+Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	295	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Lyxor iBoxx GBP Liquid Corporates Long Dated UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

- In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 4%
Orange Flag 28%
Yellow Flag 24%
Green Flag 39%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	94%
13	39	61	Scope 1 reported (vs estimated)	63%
			Scope2 reported (vs estimated)	84%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	4%
Natural Gaz	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	1
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0003

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	1.9
Oil	153.1
Gas	107.3
Total	262.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	1.9
Oil Sands	29.2
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	31.1
Other	231.2

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.0%	2.0%	4.3%
Some efforts	83.6%	95.8%	65.2%
Limited efforts/Information	0.0%	0.0%	5.0%
No effort/No evidence	11.4%	2.3%	25.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	5.7
Operational Transition	5.6%
Production Transition	5.6%
Neutral	86.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	2.8%	Liquid Fuel	Natural Gas	28.6%	Nuclear
Renewables	3.6%	30.1%	Thermal Coal	35.0%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	8%
20-49.9%	3%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	12.5%	Energy Efficiency	10.2%	Green Building	0.0%
Pollution Prevention	6.2%	Sustainable Water	8.7%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.2%	Energy Efficiency	0.6%	Green Building	0.0%
Pollution Prevention	0.1%	Sustainable Water	2.9%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	25%
Flood	2%
Heatwave	8%
Hurricane	5%
WaterStress	46%
Wildfire	12%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.3%	70.5%	27.2%	86.2%	12.3%	1.6%
Carbon Emissions	1.7%	24.2%	74.1%	84.0%	14.4%	1.6%
Electronic Waste	2.1%	5.4%	92.6%	100.0%		
Opportunities in Green Building	3.3%	21.7%	75.0%	98.0%	0.9%	1.2%
Opp's in Renewable Energy	2.5%	94.4%	3.1%	96.8%	3.1%	0.2%
Packaging Material & Waste	6.5%	47.0%	46.5%	87.1%		12.9%
Water Stress	40.8%	57.5%	1.7%	72.5%	18.0%	9.5%
Toxic Emissions & Waste				76.8%	18.6%	4.6%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core UK Government Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
0	0	180	Scope 1 reported (vs estimated)	0%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score **69.7**
Level **High**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.7**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **373.0**
Level **Extremely vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **100%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	0%	100%
IEA SDS 1.65/1.8°C	100%	0%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

Non-sector mapped			100.0%						0%	100%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	180	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor UK Government Bond 0-5Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Non-sector mapped			100.0%						0%	100%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	93%
0	0	180	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Green Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund has been awarded the "Greenfin" label. This label, created by the French Ministry of Ecological and Solidarity Transition, guarantees the green quality of investment funds.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 7%
Yellow Flag 15%
Green Flag 51%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	96%
47	397	349	Scope 1 reported (vs estimated)	96%
			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	1%
Natural Gaz	4%
Oil	3%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1.4
Gas	10.0
Total	15.1

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	4.6
Sum High Impact Reserves	4.6
Other	10.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	12.8%	1.0%	1.9%
Some efforts	42.4%	66.6%	42.3%
Limited efforts/Information	3.1%	4.6%	10.6%
No effort/No evidence	12.6%	1.4%	19.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	4.5
Low carbon transition management Score	4.1
Operational Transition	6.7%
Production Transition	6.7%
Neutral	52.5%
Solutions	5.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	14.4%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.5%	Liquid Fuel	1.9%	Natural Gas	43.5%
Nuclear	18.5%	Renewables	14.2%	Thermal Coal	7.4%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	8%
50-100%	6%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	18.7%	Energy Efficiency	17.6%	Green Building	5.8%
Pollution Prevention	0.5%	Sustainable Water	1.3%	Sustainable Agriculture	0.7%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.5%	Energy Efficiency	2.9%	Green Building	2.4%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.3%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score 52.0

Level Medium

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score 7.5

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	29%
Flood	3%
Heatwave	8%
Hurricane	3%
WaterStress	43%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on the MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	8.5%	74.8%	16.8%	81.3%	16.2%	2.5%
Carbon Emissions	2.4%	31.1%	66.4%	73.9%	24.2%	1.9%
Electronic Waste	2.3%	6.6%	91.1%	98.8%	0.1%	1.1%
Opportunities in Green Building	3.2%	32.0%	64.8%	94.5%	1.4%	4.1%
Opp's in Renewable Energy	4.5%	71.5%	23.9%	83.1%	8.0%	8.9%
Packaging Material & Waste	13.4%	21.0%	65.6%	98.5%		1.5%
Water Stress	22.5%	67.8%	9.7%	73.1%	17.9%	9.0%
Toxic Emissions & Waste				68.5%	23.9%	7.6%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor FTSE Italia All Cap PIR 2020 (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the

following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.4	6.5	5.1	5.0

Portfolio rated 99%
 Nb Securities rated 112

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 1%
 Orange Flag 17%
 Yellow Flag 23%
 Green Flag 55%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	95%
93	187	197	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	0%
Natural Gaz	5%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0023
Oil (MMBOE)	0.0024

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	998.7
Gas	736.8
Total	1 735.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	1 735.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.4%	0.0%	7.6%
Some efforts	87.7%	95.9%	55.2%
Limited efforts/Information	3.6%	3.4%	14.0%
No effort/No evidence	4.5%	0.8%	23.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.7
Low carbon transition management Score	5.0
Operational Transition	3.1%
Production Transition	3.1%
Neutral	69.8%
Solutions	3.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	23.8%	Liquid Fuel	6.6%	Natural Gas	35.7%
Nuclear	8.6%	Renewables	20.9%	Thermal Coal	4.4%

Share of issuers in terms of power generation in portfolio	17.9%
--	-------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	21.6%	Energy Efficiency	37.9%	Green Building	0.4%
Pollution Prevention	13.3%	Sustainable Water	4.6%	Sustainable Agriculture	0.0%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	42%
20-49.9%	2%
50-100%	0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	2.6%	Energy Efficiency	1.2%	Green Building	0.1%
Pollution Prevention	0.2%	Sustainable Water	0.2%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	1%
WaterStress	52%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	5.2%	91.1%	3.7%	76.5%	17.3%	6.2%
Carbon Emissions	5.5%	75.3%	19.2%	78.6%	15.7%	5.7%
Electronic Waste	7.7%	9.4%	83.0%	97.6%	2.1%	0.3%
Opportunities in Green Building	4.8%	75.6%	19.6%	99.6%	0.0%	0.4%
Opp's in Renewable Energy	6.5%	49.5%	43.9%	90.9%	4.8%	4.2%
Packaging Material & Waste	11.9%	20.4%	67.7%	95.4%		4.6%
Water Stress	9.6%	84.6%	5.8%	53.8%	38.9%	7.3%
Toxic Emissions & Waste				48.5%	28.6%	22.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.3°C
Coverage	92.6%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	22.1%
1.5-2°C	19.5%
2-3°C	11.9%
>3°C	46.5%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	162
Number of Voted Meetings	96
Participation rate at General Meetings	59.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	54.5%	45.5%	0.0%
Routine/Business	100.0%	0.0%	0.0%
Reorg. and Mergers	83.3%	16.7%	0.0%
Capitalization	63.5%	36.5%	0.0%
Non-Salary Comp.	58.6%	38.6%	2.9%
Shareholders Proposals	68.7%	31.3%	0.0%
Antitakeover Related	60.0%	40.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor FTSE Italia All Cap PIR 2020 (DR) UCITS ETF fund participated during the financial year.

Italy	96.9%
France	1.0%
Netherlands	2.1%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	5
Number of engagement	7
Number of companies under engagement / Number of companies in the fund	5%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Italy	100%
-------	------

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

ESG	29%
Corporate Governance Roadshow	43%
Climate Action 100+	29%

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor Core MSCI EMU (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and

ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.8	6.7	5.7	5.3

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 1%
Orange Flag 19%
Yellow Flag 38%
Green Flag 42%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
85	188	144	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	95%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	0%
Natural Gaz	5%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0014
Oil (MMBOE)	0.0011

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	50.7
Thermal Coal	0.0
Oil	484.9
Gas	440.5
Total	976.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	33.2
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	33.2
Other	943.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	4.2%	5.9%	10.9%
Some efforts	89.9%	90.9%	76.9%
Limited efforts/Information	0.9%	0.9%	4.0%
No effort/No evidence	4.6%	2.2%	8.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	6.1
Operational Transition	7.0%
Production Transition	7.0%
Neutral	75.1%
Solutions	4.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	15.1%	Liquid Fuel	1.3%	Natural Gas	39.3%
Nuclear	16.5%	Renewables	17.1%	Thermal Coal	10.8%

Share of issuers in terms of power generation in portfolio	9.2%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	17.9%	Energy Efficiency	26.8%	Green Building	1.7%
Pollution Prevention	8.5%	Sustainable Water	6.4%	Sustainable Agriculture	0.5%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	25%
20-49.9%	8%
50-100%	2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.4%	Energy Efficiency	3.0%	Green Building	0.4%
Pollution Prevention	0.4%	Sustainable Water	0.2%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

5.2%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	3%
Heatwave	8%
Hurricane	2%
WaterStress	44%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	8.8%	76.2%	15.0%	87.1%	9.1%	3.9%
Carbon Emissions	2.0%	47.2%	50.8%	80.2%	14.1%	5.8%
Electronic Waste	3.2%	14.3%	82.4%	99.2%	0.1%	0.7%
Opportunities in Green Building	2.6%	57.6%	39.8%	98.5%	1.1%	0.4%
Opp's in Renewable Energy	6.6%	80.4%	12.9%	95.4%	1.6%	3.0%
Packaging Material & Waste	11.1%	37.9%	51.0%	85.0%		15.0%
Water Stress	11.2%	82.0%	6.8%	54.1%	31.2%	14.7%
Toxic Emissions & Waste				46.9%	36.6%	16.5%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.3°C
Coverage	95.9%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,
- An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

<1.5°C	23.9%
1.5-2°C	18.5%
2-3°C	17.2%
>3°C	40.4%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	268
Number of Voted Meetings	146
Participation rate at General Meetings	54.5%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	92.0%	8.0%	0.0%
Antitakeover Related	33.3%	66.7%	0.0%
Routine/Business	94.8%	4.8%	0.4%
Directors Related	87.3%	12.7%	0.0%
Non-Salary Comp.	89.6%	8.6%	1.8%
Capitalization	90.9%	8.8%	0.3%
Shareholders Proposals	37.5%	50.0%	12.5%
Miscellaneous	89.5%	0.0%	10.5%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Core MSCI EMU (DR) UCITS ETF fund participated during the financial year.

France	25.3%
Germany	32.9%
Ireland	4.1%
Netherlands	12.3%
Spain	8.9%
Finland	2.7%
Luxembourg	2.1%
Italy	4.8%
Belgium	5.5%
Austria	1.4%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain. The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies.

In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	60
Number of engagement	95
Number of companies under engagement / Number of companies in the fund	26%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	5%
France	49%
Belgium	4%
Italy	5%
Germany	22%
Spain	12%
Austria	1%
Finland	1%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

General Meeting	22%
Climate Action 100+	5%
ESG	47%
Localized Water Management	2%
Responsible Cleantech	1%
Corporate Governance Roadshow	15%
Plastic & Circular Economy	7%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Japan ESG Leaders Extra (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: ESG

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com. In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe of companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.7	6.2	5.9	5.2

Portfolio rated 100%
 Nb Securities rated 132

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 3%
 Yellow Flag 22%
 Green Flag 75%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
39	78	58	Scope 1 reported (vs estimated)	96%
			Scope2 reported (vs estimated)	91%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.5%	0.3%	1.9%
Some efforts	94.0%	98.9%	94.9%
Limited efforts/Information	1.3%	0.8%	1.2%
No effort/No evidence	3.3%	0.0%	2.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	5.9
Operational Transition	5.6%
Production Transition	5.6%
Neutral	84.4%
Solutions	5.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
100.0%	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	32%
20-49.9%	4%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	21.8%	Energy Efficiency	37.6%	Green Building	7.3%
Pollution Prevention	8.1%	Sustainable Water	6.3%	Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.2%	Energy Efficiency	2.8%	Green Building	1.3%
Pollution Prevention	0.5%	Sustainable Water	0.2%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	18%
Flood	1%
Heatwave	8%
Hurricane	18%
WaterStress	42%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.6%	88.4%	10.1%	93.8%	4.5%	1.6%
Carbon Emissions	0.2%	22.4%	77.4%	79.0%	18.2%	2.9%
Electronic Waste	0.7%	2.8%	96.4%	89.0%	3.3%	7.7%
Opportunities in Green Building	0.2%	33.3%	66.5%	94.7%	4.0%	1.4%
Opp's in Renewable Energy	1.7%	36.9%	61.3%	100.0%		0.0%
Packaging Material & Waste	8.1%	28.3%	63.5%	85.0%		15.0%
Water Stress	2.0%	97.5%	0.5%	46.3%	47.1%	6.6%
Toxic Emissions & Waste				46.4%	44.6%	9.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	97.8%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	16.6%
1.5-2°C	16.7%
2-3°C	21.1%
>3°C	45.7%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	392
Number of Voted Meetings	94
Participation rate at General Meetings	24.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	97.1%	2.9%	0.0%

Lyxor Euro Government Bond 1-3Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Financials		31.7%	28.1%	40.2%					32%	68%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	207	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **96%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	20%	80%
IEA SDS 1.65/1.8°C	49%	51%
IEA STEPS 2.7°C	100%	-0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **96%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	22%	78%
IEA SDS 1.65/1.8°C	45%	55%
IEA STEPS 2.7°C	100%	-0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Euro Government Bond 10-15Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	205	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Environment Vulnerability Index of sovereign issuers in portfolio

Score **364.7**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **94%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	21%	79%
IEA SDS 1.65/1.8°C	48%	52%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core Euro Government Inflation-Linked Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
 To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO₂e/\$M invested	Carbon Intensity tons CO₂e/\$M sales	Weighted Average Carbon Intensity tons CO₂e/\$M sales	Portfolio rated by weight	100%
0	0	192	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score **52.9**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Lyxor FTSE 100 UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 9%
Orange Flag 35%
Yellow Flag 21%
Green Flag 34%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	17%
Thermal Coal	7%
Natural Gaz	15%
Oil	14%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	695
Gas (MMBOE)	0.0026
Oil (MMBOE)	0.0033

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1 511.8
Thermal Coal	1 269.2
Oil	1 435.0
Gas	840.8
Total	5 056.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1 269.2
Oil Sands	129.6
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	1 398.8
Other	3 658.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.6%	12.1%	4.6%
Some efforts	87.2%	87.2%	74.7%
Limited efforts/Information	1.8%	0.7%	15.4%
No effort/No evidence	1.4%	0.0%	5.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.7
Low carbon transition management Score	6.4
Operational Transition	7.1%
Production Transition	7.1%
Neutral	73.4%
Solutions	0.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)			
Hydro	10.9%	Liquid Fuel	0.3%
Nuclear		Renewables	18.4%
		Thermal Coal	
		Natural Gas	70.4%

Share of issuers in terms of power generation in portfolio	6.0%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	23%
20-49.9%	1%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	16.1%	Energy Efficiency	15.7%
Pollution Prevention	7.8%	Sustainable Water	4.8%
		Green Building	1.7%
		Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.8%	Energy Efficiency	0.3%
Pollution Prevention	0.3%	Sustainable Water	0.3%
		Green Building	0.6%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	7%
Hurricane	3%
WaterStress	47%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.1%	77.2%	20.7%	70.5%	12.6%	16.9%
Carbon Emissions	1.7%	42.6%	55.7%	68.9%	21.4%	9.7%
Electronic Waste	6.2%	8.7%	85.0%	99.2%	0.2%	0.6%
Opportunities in Green Building	3.4%	39.2%	57.4%	97.7%	2.0%	0.2%
Opp's in Renewable Energy	5.6%	87.6%	6.8%	98.5%	1.3%	0.2%
Packaging Material & Waste	14.7%	48.2%	37.0%	73.6%		26.4%
Water Stress	30.5%	64.7%	4.9%	39.7%	38.3%	22.0%
Toxic Emissions & Waste				41.3%	36.7%	22.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	95.2%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	21.2%
1.5-2°C	27.6%
2-3°C	8.0%
>3°C	43.2%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor MSCI EM ESG Leaders Extra UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe of companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

•Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

•the Germanwatch climate performance index score

•the environment performance score

•the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

•Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 5%
Yellow Flag 28%
Green Flag 67%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
55	204	153	Scope 1 reported (vs estimated)	81%
			Scope2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	0%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	53.8
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	53.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	53.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.8%	1.1%	3.2%
Some efforts	81.0%	92.6%	52.6%
Limited efforts/Information	6.8%	2.7%	1.7%
No effort/No evidence	11.4%	3.4%	42.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	4.0
Operational Transition	9.3%
Production Transition	9.3%
Neutral	82.6%
Solutions	4.7%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	0.6%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	52.2%	Liquid Fuel	Natural Gas	Nuclear
Renewables	47.8%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	40%
20-49.9%	3%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	8.1%	Energy Efficiency	45.1%	Green Building	2.0%
Pollution Prevention	2.7%	Sustainable Water	1.7%	Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.9%	Energy Efficiency	4.6%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	21%
Flood	2%
Heatwave	9%
Hurricane	14%
WaterStress	44%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.7%	53.6%	44.7%	89.3%	8.4%	2.3%
Carbon Emissions	7.1%	86.5%	6.4%	70.0%	25.1%	4.8%
Electronic Waste	9.7%	25.3%	65.0%	97.3%	0.4%	2.2%
Opportunities in Green Building	7.0%	78.6%	14.4%	98.1%	1.4%	0.5%
Opp's in Renewable Energy	13.8%	41.0%	45.2%	99.5%	0.2%	0.3%
Packaging Material & Waste	60.4%	22.1%	17.5%	91.9%		8.1%
Water Stress	8.3%	59.0%	32.7%	55.1%	36.1%	8.8%
Toxic Emissions & Waste				58.0%	30.5%	11.5%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.4°C
Coverage	96.3%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	15.9%
1.5-2°C	11.5%
2-3°C	6.3%
>3°C	66.0%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core MSCI World (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and

ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 1%
Orange Flag 33%
Yellow Flag 26%
Green Flag 40%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

42	143	130	Scope 1 reported (vs estimated)	95%
			Scope2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	39
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0011

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	159.7
Thermal Coal	71.6
Oil	526.6
Gas	192.0
Total	996.1

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	71.6
Oil Sands	193.9
Shale Oil or Shale Gas	109.5
Sum High Impact Reserves	375.0
Other	621.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.0%	4.9%	4.9%
Some efforts	80.4%	89.3%	71.4%
Limited efforts/Information	4.7%	2.3%	3.6%
No effort/No evidence	8.6%	3.5%	20.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.5
Operational Transition	5.5%
Production Transition	5.5%
Neutral	78.0%
Solutions	7.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	7.3%	Liquid Fuel	0.6%	Natural Gas	38.4%
Nuclear	22.3%	Renewables	12.6%	Thermal Coal	18.8%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	8%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	11.2%	Energy Efficiency	30.1%	Green Building	2.5%
Pollution Prevention	5.2%	Sustainable Water	4.7%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.6%	Energy Efficiency	4.1%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

5.5%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	24%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	44%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.3%	45.6%	52.1%	88.2%	7.9%	4.0%
Carbon Emissions	0.8%	29.2%	70.0%	78.9%	17.2%	3.9%
Electronic Waste	1.8%	7.4%	90.7%	94.1%	0.6%	5.3%
Opportunities in Green Building	1.4%	38.4%	60.1%	98.1%	1.2%	0.7%
Opp's in Renewable Energy	3.0%	87.1%	9.8%	97.9%	0.9%	1.2%
Packaging Material & Waste	9.1%	71.6%	19.3%	87.0%		13.0%
Water Stress	9.0%	88.2%	2.8%	60.6%	30.2%	9.2%
Toxic Emissions & Waste				55.8%	33.4%	10.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.9°C
Coverage	96.6%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	28.1%
1.5-2°C	18.3%
2-3°C	13.3%
>3°C	40.3%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.	Number of meetings	1 449
	Number of Voted Meetings	342
	Participation rate at General Meetings	23.6%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	84.3%	15.7%	0.0%
Antitakeover Related	77.8%	22.2%	0.0%

Capitalization	91.3%	8.5%	0.2%
Directors Related	92.3%	6.8%	0.0%
Non-Salary Comp.	87.1%	11.6%	1.3%
Shareholders Proposals	76.8%	18.1%	5.2%
Miscellaneous	91.3%	0.0%	8.7%
Other/Misc	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Core MSCI World (DR) UCITS ETF fund participated during the financial year.

France	10.8%
Ireland	2.6%
USA	23.7%
Germany	14.0%
Netherlands	5.3%
Finland	1.5%
Spain	3.8%
Japan	28.9%
Luxembourg	0.9%
Italy	2.0%
Belgium	2.3%
Austria	0.6%
United Kingdom	3.5%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain. The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies.

In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	77
Number of engagement	118
Number of companies under engagement / Number of companies in the fund	5%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	4%
France	40%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core MSCI Japan (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 0%
Orange Flag 7%
Yellow Flag 25%
Green Flag 68%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
50	95	71	Scope 1 reported (vs estimated)	91%
			Scope2 reported (vs estimated)	87%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	5%
Natural Gaz	5%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	57
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0004

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	395.1
Thermal Coal	104.6
Oil	151.8
Gas	84.1
Total	742.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	104.6
Oil Sands	0.0
Shale Oil or Shale Gas	9.2
Sum High Impact Reserves	113.8
Other	629.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.9%	0.2%	3.6%
Some efforts	85.9%	94.9%	83.3%
Limited efforts/Information	3.3%	4.9%	1.6%
No effort/No evidence	9.9%	0.0%	11.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.6
Operational Transition	6.8%
Production Transition	6.8%
Neutral	76.0%
Solutions	4.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	7.5%	Liquid Fuel	0.6%	Natural Gas	70.1%
Nuclear	6.3%	Renewables	0.2%	Thermal Coal	15.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	8%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	28.1%	Energy Efficiency	43.0%	Green Building	8.0%
Pollution Prevention	10.6%	Sustainable Water	10.3%	Sustainable Agriculture	0.6%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.3%	Energy Efficiency	3.3%	Green Building	1.2%
Pollution Prevention	0.4%	Sustainable Water	0.2%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	19%
Flood	2%
Heatwave	8%
Hurricane	16%
WaterStress	42%
Wildfire	11%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.0%	88.5%	10.5%	92.5%	6.1%	1.4%
Carbon Emissions	0.2%	24.9%	74.8%	80.4%	15.8%	3.8%
Electronic Waste	0.8%	2.5%	96.7%	92.0%	2.3%	5.7%
Opportunities in Green Building	0.3%	33.5%	66.3%	95.6%	3.2%	1.2%
Opp's in Renewable Energy	1.6%	39.8%	58.6%	99.4%	0.1%	0.4%
Packaging Material & Waste	7.7%	31.5%	60.8%	84.9%		15.1%
Water Stress	1.4%	97.8%	0.7%	45.6%	46.3%	8.0%
Toxic Emissions & Waste				40.8%	44.1%	15.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	98.2%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	18.6%
1.5-2°C	15.2%
2-3°C	15.1%
>3°C	51.0%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	301
Number of Voted Meetings	99
Participation rate at General Meetings	32.9%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	97.2%	2.8%	0.0%
Non-Salary Comp.	95.2%	4.8%	0.0%
Routine/Business	100.0%	0.0%	0.0%
Reorg. and Mergers	68.4%	31.6%	0.0%
Shareholders Proposals	37.5%	62.5%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Core MSCI Japan (DR) UCITS ETF fund participated during the financial year.

Japan	100.0%

Lyxor MSCI EM Asia UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 14%
Yellow Flag 21%
Green Flag 65%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
113	338	295	Scope 1 reported (vs estimated)	79%
			Scope2 reported (vs estimated)	83%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	7%
Thermal Coal	2%
Natural Gaz	5%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	1 018
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	720.3
Thermal Coal	1 859.4
Oil	67.3
Gas	78.1
Total	2 729.7

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1 859.4
Oil Sands	0.0
Shale Oil or Shale Gas	5.8
Sum High Impact Reserves	1 865.2
Other	864.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.7%	1.2%	2.3%
Some efforts	73.0%	87.3%	46.1%
Limited efforts/Information	8.0%	5.0%	1.9%
No effort/No evidence	18.1%	6.1%	49.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	3.9
Operational Transition	10.6%
Production Transition	10.6%
Neutral	75.8%
Solutions	5.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	3.7%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	8.3%	Liquid Fuel	0.2%	Natural Gas	9.7%
Nuclear	6.7%	Renewables	10.4%	Thermal Coal	64.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	39%
20-49.9%	3%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.3%	Energy Efficiency	42.8%	Green Building	1.8%
Pollution Prevention	3.5%	Sustainable Water	2.6%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.0%	Energy Efficiency	4.4%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

5.7%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	20%
Flood	2%
Heatwave	8%
Hurricane	13%
WaterStress	44%
Wildfire	11%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.2%	43.4%	56.4%	84.0%	13.8%	2.2%
Carbon Emissions	0.3%	95.3%	4.4%	69.7%	23.8%	6.5%
Electronic Waste	4.2%	27.6%	68.3%	92.2%	1.6%	6.2%
Opportunities in Green Building	0.5%	88.5%	11.0%	98.0%	1.8%	0.3%
Opp's in Renewable Energy	6.6%	36.8%	56.6%	98.4%	0.3%	1.2%
Packaging Material & Waste	60.0%	22.3%	17.7%	90.6%	0.0%	9.4%
Water Stress	3.5%	69.7%	26.8%	51.9%	38.8%	9.3%
Toxic Emissions & Waste				48.2%	37.3%	14.5%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.6°C
Coverage	93.4%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	15.6%
1.5-2°C	11.3%
2-3°C	8.3%
>3°C	64.8%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core UK Equity All Cap (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: ESG, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the

following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 7%
Orange Flag 31%
Yellow Flag 19%
Green Flag 42%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

61	129	116	Scope 1 reported (vs estimated)	97%
			Scope2 reported (vs estimated)	99%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	15%
Thermal Coal	6%
Natural Gaz	13%
Oil	13%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	520
Gas (MMBOE)	0.0025
Oil (MMBOE)	0.0030

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1 239.5
Thermal Coal	949.9
Oil	1 305.7
Gas	794.4
Total	4 289.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	949.9
Oil Sands	111.2
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	1 061.1
Other	3 228.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.2%	10.4%	4.8%
Some efforts	82.6%	85.6%	70.7%
Limited efforts/Information	3.8%	3.0%	13.3%
No effort/No evidence	5.5%	1.0%	11.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	6.1
Operational Transition	5.3%
Production Transition	5.3%
Neutral	76.5%
Solutions	1.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	6.4%	Liquid Fuel	0.3%	Natural Gas	41.7%
Nuclear	9.6%	Renewables	38.4%	Thermal Coal	3.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	23%
20-49.9%	2%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	15.1%	Energy Efficiency	15.8%	Green Building	2.8%
Pollution Prevention	7.5%	Sustainable Water	5.2%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	0.4%	Green Building	0.8%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	27%
Flood	2%
Heatwave	7%
Hurricane	3%
WaterStress	48%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.0%	78.9%	19.1%	74.2%	11.4%	14.3%
Carbon Emissions	1.5%	39.1%	59.4%	70.2%	20.8%	9.0%
Electronic Waste	5.6%	8.3%	86.1%	99.0%	0.2%	0.8%
Opportunities in Green Building	3.0%	36.9%	60.1%	95.9%	3.3%	0.8%
Opp's in Renewable Energy	5.2%	88.4%	6.4%	98.6%	1.2%	0.2%
Packaging Material & Waste	13.6%	44.0%	42.4%	75.4%		24.6%
Water Stress	35.6%	59.8%	4.6%	42.1%	38.7%	19.2%
Toxic Emissions & Waste				44.3%	35.8%	19.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.2°C
Coverage	93.3%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	22.5%
1.5-2°C	27.8%
2-3°C	8.0%
>3°C	41.8%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	394
Number of Voted Meetings	14
Participation rate at General Meetings	3.6%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	97.9%	2.1%	0.0%
Non-Salary Comp.	100.0%	0.0%	0.0%
Directors Related	89.9%	10.1%	0.0%
Capitalization	92.7%	7.3%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Shareholders Proposals	50.0%	50.0%	0.0%
Antitakeover Related	100.0%	0.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Core UK Equity All Cap (DR) UCITS ETF fund participated during the financial year.

United Kingdom	92.9%
Ireland	7.1%

Engagement

This fund is part of the following campaigns: ESG, Plastic & Circular Economy, Responsible Cleantech

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	4
Number of engagement	5
Number of companies under engagement / Number of companies in the fund	1%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

United Kingdom	100%
----------------	------

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

ESG	40%
Responsible Cleantech	40%
Plastic & Circular Economy	20%

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor Core US Equity (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the

following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 1%
Orange Flag 36%
Yellow Flag 25%
Green Flag 38%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
33	134	127	Scope 1 reported (vs estimated)	93%
			Scope2 reported (vs estimated)	82%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	2%
Natural Gaz	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0006
Oil (MMBOE)	0.0008

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.5
Thermal Coal	0.6
Oil	325.5
Gas	121.2
Total	512.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.6
Oil Sands	23.7
Shale Oil or Shale Gas	166.9
Sum High Impact Reserves	191.2
Other	321.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.5%	4.9%	3.7%
Some efforts	77.1%	87.1%	68.1%
Limited efforts/Information	5.4%	2.6%	3.1%
No effort/No evidence	10.8%	5.4%	25.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	5.3
Operational Transition	4.4%
Production Transition	4.4%
Neutral	79.3%
Solutions	9.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	1.7%	Liquid Fuel	0.2%	Natural Gas	37.2%
Nuclear	27.7%	Renewables	10.9%	Thermal Coal	22.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	21%
20-49.9%	10%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.7%	Energy Efficiency	33.2%	Green Building	1.8%
Pollution Prevention	4.8%	Sustainable Water	3.6%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.5%	Energy Efficiency	5.1%	Green Building	0.2%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

6.1%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	22%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	31.5%	67.9%	90.2%	7.1%	2.7%
Carbon Emissions	0.5%	25.9%	73.6%	79.9%	16.9%	3.3%
Electronic Waste	0.9%	6.6%	92.5%	93.0%	0.6%	6.4%
Opportunities in Green Building	0.6%	36.9%	62.5%	98.3%	1.1%	0.7%
Opp's in Renewable Energy	1.9%	93.1%	5.0%	98.0%	0.9%	1.1%
Packaging Material & Waste	6.8%	83.0%	10.2%	89.5%	0.0%	10.4%
Water Stress	4.6%	93.4%	2.0%	65.5%	28.0%	6.5%
Toxic Emissions & Waste				59.9%	31.8%	8.3%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.4°C
Coverage	96.4%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	30.9%
1.5-2°C	18.0%
2-3°C	12.7%
>3°C	38.3%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	726
Number of Voted Meetings	87
Participation rate at General Meetings	12.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	91.8%	5.1%	0.0%
Routine/Business	100.0%	0.0%	0.0%
Non-Salary Comp.	67.3%	32.7%	0.0%
Shareholders Proposals	81.4%	12.9%	5.7%
Antitakeover Related	100.0%	0.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%
Capitalization	85.7%	14.3%	0.0%
Miscellaneous	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Core US Equity (DR) UCITS ETF fund participated during the financial year.

USA	97.7%
Ireland	2.3%

Engagement

This fund is part of the following campaigns: Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain. The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies.

In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	10
Number of engagement	14
Number of companies under engagement / Number of companies in the fund	1%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Ireland	14%
USA	86%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

ESG	21%
Responsible Cleantech	43%
Plastic & Circular Economy	21%
Climate Action 100+	14%

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI EMU ESG Leaders Extra (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some

French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.2	7.0	6.2	5.7

Portfolio rated 100%
Nb Securities rated 114

Leaders (AAA,AA)
Average (A, BBB, BB)
Laggards (B, CCC)

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 11%
Yellow Flag 36%
Green Flag 53%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
39	96	74	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	87%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.8%	1.4%	9.2%
Some efforts	90.1%	96.3%	79.5%
Limited efforts/Information	1.2%	0.6%	1.8%
No effort/No evidence	5.1%	1.4%	9.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.2
Operational Transition	5.0%
Production Transition	5.0%
Neutral	83.5%
Solutions	6.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	15.5%	Liquid Fuel	Natural Gas	0.4%	Nuclear
	21.7%	Renewables	Thermal Coal		
			62.4%		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	14%
20-49.9%	12%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	9.9%	Energy Efficiency	23.5%	Green Building	1.2%
Pollution Prevention	6.4%	Sustainable Water	2.6%	Sustainable Agriculture	1.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	3.9%	Green Building	0.7%
Pollution Prevention	0.5%	Sustainable Water	0.1%	Sustainable Agriculture	0.2%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	32%
Flood	2%
Heatwave	8%
Hurricane	2%
WaterStress	46%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	11.7%	73.1%	15.2%	93.0%	5.1%	1.9%
Carbon Emissions	0.5%	48.4%	51.1%	85.6%	13.0%	1.3%
Electronic Waste	1.7%	19.4%	78.9%	99.7%	0.2%	0.2%
Opportunities in Green Building	0.6%	62.3%	37.0%	98.8%	0.5%	0.8%
Opp's in Renewable Energy	6.3%	81.0%	12.7%	98.8%	0.8%	0.4%
Packaging Material & Waste	8.9%	38.2%	52.8%	85.0%		15.0%
Water Stress	7.9%	86.3%	5.8%	64.8%	25.6%	9.6%
Toxic Emissions & Waste				46.6%	46.3%	7.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.6°C
Coverage	96.8%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	28.9%
1.5-2°C	13.9%
2-3°C	15.8%
>3°C	41.4%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	127
Number of Voted Meetings	64
Participation rate at General Meetings	50.4%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	80.0%	20.0%	0.0%
Antitakeover Related	25.0%	75.0%	0.0%

Miscellaneous	100.0%	0.0%	0.0%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI EMU ESG Leaders Extra (DR) UCITS ETF fund participated during the financial year.

France	23.4%
Germany	28.1%
Ireland	6.2%
Spain	9.4%
Finland	4.7%
Luxembourg	1.6%
Netherlands	17.2%
Italy	3.1%
Belgium	6.2%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	24
Number of engagement	37
Number of companies under engagement / Number of companies in the fund	22%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	3%
France	49%
Italy	3%
Spain	14%
Germany	22%
Austria	3%
Belgium	5%
Finland	3%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI USA ESG Leaders Extra (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some

French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 21%
Yellow Flag 31%
Green Flag 48%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

13	59	68	Scope 1 reported (vs estimated)	97%
			Scope2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	8.5%	9.6%	1.8%
Some efforts	77.8%	85.9%	75.2%
Limited efforts/Information	5.5%	2.0%	1.1%
No effort/No evidence	8.0%	2.6%	21.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers’ carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.6
Operational Transition	3.3%
Production Transition	3.3%
Neutral	75.2%
Solutions	18.0%

Energy Mix of energy producers within the portfolio

The company’s fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	0.3%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	0.0%	Natural Gas	30.5%	Nuclear
	Renewables	69.5%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio’s exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	21%
20-49.9%	18%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	7.3%	Energy Efficiency	40.9%
Pollution Prevention	3.7%	Sustainable Water	3.8%
		Green Building	1.6%
		Sustainable Agriculture	0.5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world’s major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer’s percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.3%	Energy Efficiency	9.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%
		Green Building	0.2%
		Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	22%
Flood	2%
Heatwave	7%
Hurricane	4%
WaterStress	46%
Wildfire	18%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.7%	32.6%	66.6%	91.9%	7.0%	1.1%
Carbon Emissions	0.4%	26.3%	73.3%	79.7%	19.0%	1.4%
Electronic Waste	0.7%	8.2%	91.1%	97.4%	0.8%	1.8%
Opportunities in Green Building	0.5%	37.2%	62.3%	98.8%	0.8%	0.4%
Opp's in Renewable Energy	2.4%	92.5%	5.1%	99.8%	0.2%	0.0%
Packaging Material & Waste	6.3%	81.8%	12.0%	90.3%		9.7%
Water Stress	5.1%	92.7%	2.2%	66.5%	26.4%	7.1%
Toxic Emissions & Waste				62.6%	30.4%	7.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.1°C
Coverage	99.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	32.0%
1.5-2°C	16.4%
2-3°C	12.7%
>3°C	38.9%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	306
Number of Voted Meetings	47
Participation rate at General Meetings	15.4%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	93.8%	6.0%	0.0%
Non-Salary Comp.	76.2%	23.8%	0.0%
Routine/Business	100.0%	0.0%	0.0%

Antitakeover Related	100.0%	0.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%
Capitalization	80.0%	20.0%	0.0%
Miscellaneous	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI USA ESG Leaders Extra (DR) UCITS ETF fund participated during the financial year.

USA	95.7%
Ireland	4.3%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	5
Number of engagement	7
Number of companies under engagement / Number of companies in the fund	2%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Ireland	29%
USA	71%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

ESG	43%
Climate Action 100+	14%
Responsible Cleantech	14%
Plastic & Circular Economy	29%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World ESG Leaders Extra (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some

French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.6	6.5	5.5	5.3

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
19	70	71	Scope 1 reported (vs estimated)	97%
			Scope2 reported (vs estimated)	90%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1.0
Thermal Coal	0.0
Oil	0.3
Gas	0.0
Total	1.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	1.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.2%	7.3%	3.2%
Some efforts	79.7%	88.9%	76.6%
Limited efforts/Information	5.5%	1.8%	1.3%
No effort/No evidence	7.2%	1.9%	18.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	5.7
Operational Transition	4.0%
Production Transition	4.0%
Neutral	77.3%
Solutions	14.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.3%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	28.6%	Liquid Fuel	0.3%	Natural Gas	16.4%
Nuclear	9.0%	Renewables	45.8%	Thermal Coal	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	20%
20-49.9%	15%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.7%	Energy Efficiency	35.4%	Green Building	2.4%
Pollution Prevention	4.1%	Sustainable Water	4.4%	Sustainable Agriculture	0.6%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.5%	Energy Efficiency	7.0%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.7%	45.0%	52.3%	91.3%	7.1%	1.6%
Carbon Emissions	0.5%	28.4%	71.2%	80.1%	18.0%	1.9%
Electronic Waste	1.3%	8.4%	90.3%	97.3%	0.8%	1.9%
Opportunities in Green Building	1.2%	38.1%	60.7%	98.2%	1.2%	0.6%
Opp's in Renewable Energy	3.2%	86.4%	10.4%	99.5%	0.4%	0.1%
Packaging Material & Waste	8.2%	70.6%	21.2%	88.3%		11.7%
Water Stress	9.1%	88.2%	2.7%	62.7%	29.1%	8.1%
Toxic Emissions & Waste				58.6%	33.2%	8.2%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.6°C
Coverage	98.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	29.1%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	16.0%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	14.4%
-------	-------

Alignment is measured using a temperature indicator.

>3°C	40.5%
------	-------

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	707
Number of Voted Meetings	179
Participation rate at General Meetings	25.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	81.8%	18.2%	0.0%
Antitakeover Related	66.7%	33.3%	0.0%
Routine/Business	97.1%	2.5%	0.5%
Directors Related	93.4%	6.5%	0.0%
Non-Salary Comp.	88.7%	10.2%	1.1%
Shareholders Proposals	79.2%	16.7%	4.2%
Capitalization	91.2%	8.4%	0.4%
Miscellaneous	100.0%	0.0%	0.0%
Other/Misc	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI World ESG Leaders Extra (DR) UCITS ETF fund participated during the financial year.

France	9.5%
USA	25.1%
Germany	10.6%
Ireland	3.9%
Japan	29.1%
Spain	2.8%
Finland	1.7%
Luxembourg	0.6%
Netherlands	6.7%
Italy	1.7%
Belgium	2.8%
United Kingdom	5.0%
Austria	0.6%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	35
Number of engagement	52
Number of companies under engagement / Number of companies in the fund	5%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	6%
France	37%
Italy	2%
Spain	10%
Germany	12%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Euro Floating Rate Note UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe of companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

•Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

•the Germanwatch climate performance index score

•the environment performance score

•the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

•Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

•Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.6	7.9	5.0	5.4

Portfolio rated 100%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

 Green Flag 20%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
1	7	7	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	100%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.7%	1.3%	0.0%
Some efforts	97.3%	98.7%	96.9%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	3.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	5.6
Operational Transition	0.0%
Production Transition	0.0%
Neutral	90.7%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	7.9%	Liquid Fuel	Natural Gas	Nuclear
Renewables	92.1%	Thermal Coal		

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	8%
20-49.9%	1%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	0.9%	Energy Efficiency	11.3%	Green Building	0.9%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.0%	Energy Efficiency	0.7%	Green Building	0.6%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	26%
Flood	2%
Heatwave	8%
Hurricane	4%
WaterStress	46%
Wildfire	11%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	5.9%	83.6%	10.5%	100.0%		
Carbon Emissions	0.8%	43.7%	55.5%	97.6%	2.4%	
Electronic Waste	1.9%	9.8%	88.3%	100.0%		
Opportunities in Green Building	3.9%	44.3%	51.8%	96.8%	2.1%	1.1%
Opp's in Renewable Energy	6.9%	72.6%	20.5%	100.0%		
Packaging Material & Waste	15.2%	31.5%	53.3%	98.6%		1.4%
Water Stress	16.9%	74.9%	8.2%	87.1%	12.9%	
Toxic Emissions & Waste				90.1%	2.8%	7.1%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI All Country World UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

53	177	152	Scope 1 reported (vs estimated)	91%
			Scope2 reported (vs estimated)	87%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	2%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	149
Gas (MMBOE)	0.0014
Oil (MMBOE)	0.0013

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	212.2
Thermal Coal	272.2
Oil	616.4
Gas	423.2
Total	1 566.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	272.2
Oil Sands	172.7
Shale Oil or Shale Gas	98.6
Sum High Impact Reserves	543.5
Other	1 022.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.5%	4.5%	4.8%
Some efforts	79.4%	89.0%	68.4%
Limited efforts/Information	5.1%	2.6%	3.6%
No effort/No evidence	9.8%	3.9%	23.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	5.3
Operational Transition	6.4%
Production Transition	6.4%
Neutral	77.4%
Solutions	7.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	8.7%	Liquid Fuel	0.8%	Natural Gas	36.1%
Nuclear	18.9%	Renewables	11.4%	Thermal Coal	24.2%

Share of issuers in terms of power generation in portfolio	4.8%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	11.1%	Energy Efficiency	30.9%	Green Building	2.5%
Pollution Prevention	5.0%	Sustainable Water	4.4%	Sustainable Agriculture	0.3%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	23%
20-49.9%	8%
50-100%	2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.7%	Energy Efficiency	4.1%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	8%
Hurricane	6%
WaterStress	44%
Wildfire	15%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.3%	46.2%	51.5%	87.2%	8.5%	4.2%
Carbon Emissions	1.7%	35.4%	62.9%	77.6%	18.0%	4.4%
Electronic Waste	2.9%	10.0%	87.1%	94.0%	0.7%	5.3%
Opportunities in Green Building	2.3%	43.0%	54.6%	98.1%	1.3%	0.7%
Opp's in Renewable Energy	4.5%	81.7%	13.7%	98.0%	0.9%	1.2%
Packaging Material & Waste	15.2%	65.8%	19.0%	87.4%	0.0%	12.6%
Water Stress	9.3%	85.0%	5.7%	59.9%	30.6%	9.6%
Toxic Emissions & Waste				55.3%	33.1%	11.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.9°C
Coverage	96.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,
- An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

<1.5°C	26.9%
1.5-2°C	17.5%
2-3°C	12.8%
>3°C	42.8%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Nasdaq-100 UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:	For Government: Metrics exposure and management of Key ESG issues cover the following themes:
- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities	- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities	- Social: Human Capital, Economic Environment
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities	- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

Red Flag 0%
Orange Flag 42%
Yellow Flag 25%
Green Flag 32%

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
9	60	46	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	68%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	12.6%	8.6%	1.0%
Some efforts	75.2%	84.9%	70.5%
Limited efforts/Information	4.5%	1.5%	0.3%
No effort/No evidence	7.6%	4.9%	28.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.2
Operational Transition	1.9%
Production Transition	1.9%
Neutral	80.2%
Solutions	16.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	1.1%	Liquid Fuel	0.1%	Natural Gas	17.5%
Nuclear	58.8%	Renewables	4.8%	Thermal Coal	17.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	27%
20-49.9%	16%
50-100%	4%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.0%	Energy Efficiency	47.1%	Green Building	0.0%
Pollution Prevention	1.0%	Sustainable Water	2.8%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.4%	Energy Efficiency	9.3%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	21%
Flood	2%
Heatwave	7%
Hurricane	3%
WaterStress	48%
Wildfire	17%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.3%	26.3%	72.4%	95.2%	4.8%	
Carbon Emissions	0.1%	25.1%	74.7%	79.2%	20.7%	0.1%
Electronic Waste	0.6%	8.6%	90.7%	89.1%		10.9%
Opportunities in Green Building	0.4%	46.5%	53.1%	100.0%		
Opp's in Renewable Energy	3.3%	86.7%	10.0%	99.1%	0.5%	0.4%
Packaging Material & Waste	11.3%	76.4%	12.4%	94.7%		5.3%
Water Stress	5.4%	91.5%	3.0%	70.5%	25.3%	4.1%
Toxic Emissions & Waste				63.2%	31.8%	5.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	96.6%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	33.3%
1.5-2°C	7.8%
2-3°C	15.2%
>3°C	43.8%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor EURO STOXX Banks (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the

following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.6	8.6	5.0	5.5

Portfolio rated 100%
 Nb Securities rated 22

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight
Environment		8.6	12.9%		0.0	0.0%
	Climat Change	8.6	12.9%	Environmental Externalities	0.0	0.0%
	Environmental Opportunities	0.0	0.0%	Natural Resource	0.0	0.0%
	Natural Capital	0.0	0.0%			
	Pollution & Waste	0.0	0.0%			
Social		5.0	54.0%		0.0	0.0%
	Human Capital	5.9	15.3%	Human Capital	0.0	0.0%
	Product Liability	4.6	27.3%	Economic Environment	0.0	0.0%
	Social Opportunities	4.8	11.4%			
	Stakeholder Opposition	0.0	0.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials	25.9%	52.5%	18.9%	1.8%	1.0%				78%	22%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	32%
Yellow Flag	49%
Green Flag	20%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	3	3	Scope 1 reported (vs estimated)	100%
			Scope2 reported (vs estimated)	96%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.4%	1.4%	0.0%
Some efforts	94.6%	98.6%	93.6%
Limited efforts/Information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	6.4%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.6
Low carbon transition management Score	5.6
Operational Transition	0.0%
Production Transition	0.0%
Neutral	100.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.0%	Energy Efficiency	0.0%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	6%
Coldwave	30%
Flood	2%
Heatwave	8%
Hurricane	2%
WaterStress	47%
Wildfire	4%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	12.1%	83.8%	4.1%	100.0%		
Carbon Emissions	1.0%	57.1%	41.9%	100.0%		
Electronic Waste	1.2%	9.9%	88.9%	100.0%		
Opportunities in Green Building	2.8%	57.3%	40.0%	100.0%		
Opp's in Renewable Energy	7.5%	74.3%	18.3%	100.0%		
Packaging Material & Waste	12.2%	11.9%	75.9%	100.0%		
Water Stress	23.2%	58.9%	18.0%	100.0%		
Toxic Emissions & Waste				100.0%		

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.7°C
Coverage	99.2%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	16.4%
1.5-2°C	26.3%
2-3°C	17.1%
>3°C	40.1%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	27
Number of Voted Meetings	26
Participation rate at General Meetings	96.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Capitalization	100.0%	0.0%	0.0%
Routine/Business	100.0%	0.0%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Directors Related	89.3%	10.7%	0.0%
Other/Misc	100.0%	0.0%	0.0%
Non-Salary Comp.	94.9%	2.0%	3.0%
Shareholders Proposals	60.0%	40.0%	0.0%
Reorg. and Mergers	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor EURO STOXX Banks (DR) UCITS ETF fund participated during the financial year.

Ireland	3.8%
Austria	15.4%
Spain	19.2%
Italy	23.1%
Netherlands	7.7%
Belgium	3.8%
France	19.2%
Germany	7.7%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	9
Number of engagement	11
Number of companies under engagement / Number of companies in the fund	41%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Italy	9%
France	36%
Netherlands	9%
Spain	27%
Germany	9%
Austria	9%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

ESG	55%
Corporate Governance Roadshow	27%
General Meeting	18%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor ESG Euro Corporate Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastic and circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: ESG, Climate Action 100+, Corporate Governance, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.7	7.1	5.2	5.5

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 26%
 Yellow Flag 35%
 Green Flag 38%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
45	147	99	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	95%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	0%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0001
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	3.9
Thermal Coal	0.0
Oil	20.7
Gas	37.9
Total	62.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	62.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.6%	3.8%	4.9%
Some efforts	87.7%	94.7%	84.6%
Limited efforts/Information	5.3%	1.5%	2.9%
No effort/No evidence	2.1%	0.0%	7.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.3
Low carbon transition management Score	5.9
Operational Transition	5.4%
Production Transition	5.4%
Neutral	85.4%
Solutions	3.3%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	8.1%	Liquid Fuel	0.0%	Natural Gas	32.4%
Nuclear	2.4%	Renewables	52.6%	Thermal Coal	4.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	17%
20-49.9%	4%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.9%	Energy Efficiency	18.4%	Green Building	5.4%
Pollution Prevention	6.0%	Sustainable Water	5.3%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.5%	Energy Efficiency	1.8%	Green Building	2.1%
Pollution Prevention	0.2%	Sustainable Water	0.3%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	29%
Flood	2%
Heatwave	8%
Hurricane	3%
WaterStress	44%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.9%	78.2%	14.8%	89.6%	9.0%	1.4%
Carbon Emissions	0.9%	39.4%	59.7%	83.5%	14.2%	2.3%
Electronic Waste	1.3%	7.8%	90.9%	99.5%	0.1%	0.4%
Opportunities in Green Building	1.7%	41.6%	56.7%	94.4%	3.2%	2.5%
Opp's in Renewable Energy	3.4%	78.8%	17.7%	98.5%	1.2%	0.3%
Packaging Material & Waste	8.3%	36.1%	55.6%	89.3%		10.7%
Water Stress	17.1%	76.6%	6.3%	70.2%	21.7%	8.1%
Toxic Emissions & Waste				74.7%	16.6%	8.8%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Engagement

This fund is part of the following campaigns: ESG, Climate Action 100+, Corporate Governance, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain. The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies.

In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	49
Number of engagement	70
Number of companies under engagement / Number of companies in the fund	18%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Germany	21%
Ireland	3%
France	47%
United Kingdom	3%
Spain	11%
Japan	4%
Italy	1%
Netherlands	3%
Austria	1%
Belgium	3%
Finland	1%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Plastic & Circular Economy	11%
ESG	46%
Corporate Governance Roadshow	14%
General Meeting	24%
Climate Action 100+	1%
Responsible Cleantech	3%

Lyxor ESG Euro Corporate Bond Ex Financials (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastic and circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: ESG, Climate Action 100+, Corporate Governance, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.6	6.8	5.3	5.3

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	31%
Yellow Flag	31%
Green Flag	38%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
90	210	185	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	95%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	0%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0001

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	7.9
Thermal Coal	0.0
Oil	42.1
Gas	77.1
Total	127.1

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	127.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.2%	3.5%	10.0%
Some efforts	89.0%	94.9%	77.8%
Limited efforts/Information	3.5%	1.6%	5.9%
No effort/No evidence	2.6%	0.0%	6.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	6.4
Operational Transition	10.9%
Production Transition	10.9%
Neutral	69.9%
Solutions	6.6%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	8.1%	Liquid Fuel	0.0%	Natural Gas	32.4%
Nuclear	2.4%	Renewables	52.6%	Thermal Coal	4.5%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	32%
20-49.9%	8%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	14.1%	Energy Efficiency	36.2%	Green Building	3.0%
Pollution Prevention	12.3%	Sustainable Water	10.8%	Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.1%	Energy Efficiency	3.3%	Green Building	0.2%
Pollution Prevention	0.4%	Sustainable Water	0.6%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	29%
Flood	3%
Heatwave	8%
Hurricane	4%
WaterStress	45%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.8%	73.1%	24.1%	78.4%	18.4%	3.2%
Carbon Emissions	1.2%	41.3%	57.5%	77.3%	17.9%	4.8%
Electronic Waste	1.3%	8.5%	90.2%	98.0%	0.5%	1.5%
Opportunities in Green Building	1.6%	46.4%	52.0%	99.9%	0.1%

Toxic Emissions & Waste				45.9%	35.8%	18.2%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Engagement

This fund is part of the following campaigns: ESG, Climate Action 100+, Corporate Governance, Localized Water Management, Plastic & Circular Economy, Responsible Cleantech

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Plastic & Circular Economy: Lyxor joined a collaborative engagement campaign on the theme of plastic and the circular economy. The objective is to understand with key players what the stakes of plastic are and how to integrate the associated risks throughout the value chain.

Throughout this initial three-year engagement campaign, Lyxor and the various stakeholders are addressing key issues, such as life-cycle analysis, which is crucial in establishing a circular economy, or the quality of recycled materials and the confidence in the material, one of the main challenges to increase the use of recycled plastics. In addition to assessing the commitment of companies, Lyxor explores practical issues regarding the establishment of a circular economy and exchanges on best market practices in order to find sustainable and accessible solutions for all stakeholders.

Responsible Cleantech: Lyxor initiated in 2020 a thematic campaign on clean and responsible technologies. The objective of this engagement campaign is to implement a holistic approach to assess and manage ESG risks associated with the development of this type of technology.

In addition to assessing companies' practices, this campaign aims to identify potential points of vigilance and improvement and work together in the search for sustainable solutions. More specifically, this thematic commitment aims to:

- Apply a life-cycle approach to clean technology products;
- Catalyze more sustainable production of some of the most popular cleantech solutions;
- Explore ways to more effectively address environmental and social risks in production and supply chain.

Localized Water Management: Aware of the growing challenge of water management, Lyxor launched a collaborative thematic engagement campaign on water management in 2020. Most companies are aware of the importance of water management issues but do not make them a priority. The objective of this campaign is to remedy this phenomenon so that all companies can integrate these issues throughout their value chain. The starting point for good management of water-related issues is to properly map the risks and associated impacts that fall under the direct and indirect control of companies.

In addition to assessing companies' practices, the idea is to mobilize them more on this topic, in other words, to ensure that companies' approach to water risk assessment and management:

- Proactively and effectively contributes to long-term business continuity;
- Is environmentally sustainable;
- Respects the development needs of the countries concerned.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	30
Number of engagement	48
Number of companies under engagement / Number of companies in the fund	21%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Germany	25%
France	54%
Spain	10%
Japan	4%
United Kingdom	2%
Belgium	4%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Plastic & Circular Economy	17%
ESG	40%
General Meeting	25%
Corporate Governance Roadshow	15%
Climate Action 100+	2%
Responsible Cleantech	2%

Lyxor Commodities Refinitiv/CoreCommodity CRB TR UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		70.9%	29.1%						71%	29%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	203	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score **54.7**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.5**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

Score **359.6**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor EuroMTS Highest Rated Macro-Weighted Govt Bond 3-5Y (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		70.9%	29.1%						71%	29%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO₂e/\$M invested	Carbon Intensity tons CO₂e/\$M sales	Weighted Average Carbon Intensity tons CO₂e/\$M sales	Portfolio rated by weight	100%
0	0	203	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score **54.7**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.5**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **359.6**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI China UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	3%
Thermal Coal	2%
Natural Gaz	2%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	770
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	494.7
Thermal Coal	1 406.9
Oil	69.3
Gas	89.2
Total	2 065.1

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

8.6%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	22%
Flood	2%
Heatwave	6%
Hurricane	4%
WaterStress	58%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.1%	12.7%	87.2%	91.1%	6.5%	2.4%
Carbon Emissions	0.2%	96.4%	3.4%	85.3%	11.2%	3.5%
Electronic Waste	0.3%	0.2%	99.4%	96.4%	0.5%	3.0%
Opportunities in Green Building	0.5%	97.7%	1.8%	96.5%	3.1%	0.4%
Opp's in Renewable Energy	0.4%	9.2%	90.4%	98.6%		1.4%
Packaging Material & Waste	90.7%	8.3%	1.0%	90.2%	0.1%	9.7%
Water Stress	1.1%	98.8%	0.1%	63.6%	27.9%	8.5%
Toxic Emissions & Waste				65.3%	21.4%	13.3%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	89.3%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	19.4%
1.5-2°C	4.5%
2-3°C	8.6%
>3°C	67.6%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor Inverse US\$ 10Y Inflation Expectations UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Financials			100.0%						0%	100%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO₂e/\$M invested	Carbon Intensity tons CO₂e/\$M sales	Weighted Average Carbon Intensity tons CO₂e/\$M sales	Portfolio rated by weight	100%
0	0	295	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

Pursuant to articles L.533-22-1 and D. 533-16-1 of the Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com.

For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 8%
 Yellow Flag 44%
 Green Flag 48%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
29	117	81	Scope 1 reported (vs estimated)	22%
			Scope2 reported (vs estimated)	70%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.2%	0.0%	0.0%
Some efforts	64.8%	88.2%	27.2%
Limited efforts/Information	11.9%	7.5%	1.6%
No effort/No evidence	23.1%	4.3%	71.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	3.8
Operational Transition	4.2%
Production Transition	4.2%
Neutral	81.7%
Solutions	8.5%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	0.8%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
100.0%	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	38%
20-49.9%	5%
50-100%	6%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	5.9%	Energy Efficiency	44.8%	Green Building	3.3%
Pollution Prevention	2.7%	Sustainable Water	1.2%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	2.0%	Energy Efficiency	7.2%	Green Building	0.3%
Pollution Prevention	0.3%	Sustainable Water	0.2%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	22%
Flood	2%
Heatwave	6%
Hurricane	4%
WaterStress	58%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.0%	11.3%	88.7%	94.4%	5.1%	0.5%
Carbon Emissions	0.2%	96.4%	3.4%	89.3%	9.5%	1.2%
Electronic Waste	0.2%	0.3%	99.5%	97.4%	0.1%	2.5%
Opportunities in Green Building	0.2%	97.8%	2.0%	96.2%	3.2%	0.6%
Opp's in Renewable Energy	0.2%	7.7%	92.1%	99.9%		0.1%
Packaging Material & Waste	92.1%	6.8%	1.1%	92.5%		7.5%
Water Stress	1.1%	98.9%	0.0%	67.9%	27.3%	4.7%
Toxic Emissions & Waste				69.6%	18.8%	11.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	94.7%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	22.3%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	1.9%
---------	------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	8.4%
-------	------

Alignment is measured using a temperature indicator.

>3°C	67.4%
------	-------

For more information on the methodology applied by LYXOR:

Engagement

This fund is part of the following campaigns: ESG

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	1
Number of engagement	1
Number of companies under engagement / Number of companies in the fund	7%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Hong Kong (HSI) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 4%

			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	6%
Thermal Coal	3%
Natural Gaz	5%
Oil	5%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0007
Oil (MMBOE)	0.0010

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	445.3
Gas	211.2
Total	663.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	120.2
Shale Oil or Shale Gas	7.0
Sum High Impact Reserves	127.2
Other	536.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.1%	0.0%	2.1%
Some efforts	67.0%	95.2%	35.5%
Limited efforts/Information	12.3%	4.8%	4.8%
No effort/No evidence	19.6%	0.0%	57.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	4.1
Operational Transition	4.3%
Production Transition	4.3%
Neutral	85.5%
Solutions	2.9%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	2.3%	Liquid Fuel	0.0%	Natural Gas	23.0%
Nuclear	13.8%	Renewables	5.3%	Thermal Coal	55.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	25%
20-49.9%	3%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	7.0%	Energy Efficiency	23.3%	Green Building	6.1%
Pollution Prevention	1.8%	Sustainable Water	3.2%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.7%	Energy Efficiency	2.2%	Green Building	1.3%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	20%
Flood	2%
Heatwave	7%
Hurricane	13%
WaterStress	48%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.3%	38.1%	60.6%	94.9%	4.0%	1.1%
Carbon Emissions	1.4%	78.4%	20.2%	86.0%	12.6%	1.4%
Electronic Waste	1.5%	1.4%	97.1%	97.1%	0.2%	2.7%
Opportunities in Green Building	18.1%	73.5%	8.4%	93.5%	4.1%	2.4%
Opp's in Renewable Energy	1.5%	18.6%	79.9%	98.0%	1.0%	1.0%
Packaging Material & Waste	82.3%	12.4%	5.3%	95.7%		4.3%
Water Stress	5.5%	93.1%	1.4%	72.4%	22.3%	5.3%
Toxic Emissions & Waste				79.7%	14.6%	5.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	98.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	34.8%
1.5-2°C	4.8%
2-3°C	12.7%
>3°C	47.7%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI AC Asia Ex Japan UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 13%
Yellow Flag 21%
Green Flag 65%

Climate Risks & Energy Transition

107	333	293	Scope 1 reported (vs estimated)	80%
			Scope2 reported (vs estimated)	83%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	7%
Thermal Coal	3%
Natural Gaz	5%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	917
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	649.1
Thermal Coal	1 675.4
Oil	66.5
Gas	71.0
Total	2 466.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1 675.4
Oil Sands	5.1
Shale Oil or Shale Gas	5.2
Sum High Impact Reserves	1 685.8
Other	780.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.9%	1.1%	2.4%
Some efforts	71.6%	87.9%	46.8%
Limited efforts/Information	8.2%	4.5%	2.8%
No effort/No evidence	19.2%	6.2%	48.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	4.0
Operational Transition	10.2%
Production Transition	10.2%
Neutral	76.5%
Solutions	4.9%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	4.0%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	7.5%	Liquid Fuel	0.2%	Natural Gas	11.5%
Nuclear	7.4%	Renewables	9.8%	Thermal Coal	63.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	37%
20-49.9%	3%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	9.6%	Energy Efficiency	40.1%	Green Building	3.6%
Pollution Prevention	3.7%	Sustainable Water	3.1%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.9%	Energy Efficiency	4.1%	Green Building	0.7%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	20%
Flood	2%
Heatwave	9%
Hurricane	14%
WaterStress	43%
Wildfire	10%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.9%	45.2%	52.9%	84.9%	13.1%	2.0%
Carbon Emissions	0.5%	91.1%	8.4%	70.1%	23.7%	6.1%
Electronic Waste	6.1%	25.2%	68.7%	93.0%	1.5%	5.6%
Opportunities in Green Building	4.4%	84.6%	11.0%	96.7%	2.4%	0.9%
Opp's in Renewable Energy	7.6%	36.2%	56.2%	98.1%	0.5%	1.4%
Packaging Material & Waste	61.8%	21.8%	16.5%	91.3%	0.0%	8.7%
Water Stress	4.4%	69.7%	25.9%	53.4%	37.8%	8.8%
Toxic Emissions & Waste				51.9%	34.8%	13.4%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.8°C
Coverage	93.3%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	17.5%
1.5-2°C	11.3%
2-3°C	9.6%
>3°C	61.6%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI AC Asia Pacific Ex Japan UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)**1. Description of ESG criteria**

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	16%
Yellow Flag	20%
Green Flag	63%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
103	333	279	Scope 1 reported (vs estimated)	82%
			Scope2 reported (vs estimated)	86%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	8%
Thermal Coal	4%
Natural Gaz	6%
Oil	6%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	859
Gas (MMBOE)	0.0004
Oil (MMBOE)	0.0002

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	829.6
Thermal Coal	1 569.6
Oil	72.1
Gas	90.9
Total	2 584.7

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	1 569.6
Oil Sands	4.3
Shale Oil or Shale Gas	23.4
Sum High Impact Reserves	1 597.3
Other	987.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.8%	2.0%	3.8%
Some efforts	72.8%	87.8%	50.2%
Limited efforts/Information	8.0%	4.5%	2.7%
No effort/No evidence	18.3%	5.2%	43.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.0
Low carbon transition management Score	4.1
Operational Transition	9.8%
Production Transition	9.8%
Neutral	76.6%
Solutions	4.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	8.8%	Liquid Fuel	0.2%	Natural Gas	11.6%
Nuclear	7.0%	Renewables	9.8%	Thermal Coal	62.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	33%
20-49.9%	3%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.5%	Energy Efficiency	34.7%	Green Building	4.1%
Pollution Prevention	3.4%	Sustainable Water	2.6%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	3.5%	Green Building	0.8%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	20%
Flood	2%
Heatwave	8%
Hurricane	12%
WaterStress	43%
Wildfire	12%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.7%	51.4%	46.9%	83.5%	12.2%	4.3%
Carbon Emissions	0.5%	79.8%	19.7%	70.3%	23.5%	6.2%
Electronic Waste	5.6%	22.5%	71.8%	94.0%	1.2%	4.7%
Opportunities in Green Building	3.7%	74.2%	22.1%	96.5%	2.4%	1.1%
Opp's in Renewable Energy	7.6%	44.5%	47.8%	98.3%	0.5%	1.2%
Packaging Material & Waste	54.0%	31.1%	14.9%	91.9%	0.0%	8.1%
Water Stress	5.1%	71.9%	23.1%	53.2%	36.8%	10.0%
Toxic Emissions & Waste				53.2%	31.8%	15.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	93.7%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	16.7%
1.5-2°C	11.3%
2-3°C	11.8%
>3°C	60.2%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Indonesia UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
4.5	3.9	5.7	3.3

Portfolio rated 100%
Nb Securities rated 22

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 9%
Yellow Flag 0%
Green Flag 91%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
121	421	341	Scope 1 reported (vs estimated)	64%
			Scope2 reported (vs estimated)	37%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	14%
Thermal Coal	14%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	4 736
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	1 857.7
Thermal Coal	8 650.1
Oil	0.0
Gas	0.0
Total	10 507.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	8 650.1
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	8 650.1
Other	1 857.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	64.3%	90.9%	10.4%
Limited efforts/Information	28.6%	1.1%	3.6%
No effort/No evidence	7.0%	8.0%	86.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.5
Low carbon transition management Score	3.5
Operational Transition	12.5%
Production Transition	12.5%
Neutral	73.3%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.5%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
100.0%	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	14%
20-49.9%	1%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	1.5%	Energy Efficiency	19.5%	Green Building	7.1%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	3.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.2%	Energy Efficiency	0.3%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.4%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	6%
Coldwave	4%
Flood	3%
Heatwave	28%
Hurricane	1%
WaterStress	55%
Wildfire	2%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.1%	4.9%	94.9%	79.7%	9.4%	10.9%
Carbon Emissions	0.1%	99.2%	0.7%	81.6%	12.7%	5.7%
Electronic Waste	96.0%		3.9%	100.0%		
Opportunities in Green Building	0.4%	99.1%	0.5%	100.0%	0.0%	
Opp's in Renewable Energy	0.4%	3.9%	95.6%	99.7%		0.3%
Packaging Material & Waste	96.0%	3.8%	0.1%	91.0%		9.0%
Water Stress	0.3%	99.6%	0.1%	76.4%	6.2%	17.3%
Toxic Emissions & Waste				79.8%	7.8%	12.4%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	97.2%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	3.4%
1.5-2°C	9.5%
2-3°C	23.2%
>3°C	63.9%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor MSCI Semiconductors ESG Filtered UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastic and circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: No

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe of companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.1	5.5	6.9	5.7

Portfolio rated 100%
Nb Securities rated 53

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

				Financial Governance	0.0	0.0%
				Political Governance	0.0	0.0%

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated
Information Technology	44.3%	17.4%	12.5%	11.7%	12.4%	1.7%	0.0%	

Leaders (AAA,AA) 62%
Average (A, BBB, BB) 37%
Laggards (B, CCC) 2%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 5%
Yellow Flag 13%
Green Flag 81%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
13	92	78	Scope 1 reported (vs estimated)	96%
			Scope2 reported (vs estimated)	78%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	5.2%	0.0%
Some efforts	87.7%	86.0%	86.7%
Limited efforts/Information	2.5%	1.2%	0.0%
No effort/No evidence	9.8%	7.6%	13.3%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	4.7
Operational Transition	6.2%
Production Transition	6.2%
Neutral	87.3%
Solutions	6.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)				
Hydro	Liquid Fuel	Natural Gas	Nuclear	Renewables
100.0%	Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	46%
20-49.9%	23%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	8.8%	Energy Efficiency	72.6%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	6.6%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.0%	Energy Efficiency	10.3%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

11.3%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	20%
Flood	1%
Heatwave	8%
Hurricane	8%
WaterStress	48%
Wildfire	14%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	8.1%	39.2%	52.7%	100.0%	0.0%	
Carbon Emissions		43.3%	56.7%	21.0%	79.0%	
Electronic Waste	3.2%	22.2%	74.6%	100.0%		
Opportunities in Green Building	0.4%	71.2%	28.4%	100.0%		
Opp's in Renewable Energy	17.3%	51.8%	30.8%	100.0%		0.0%
Packaging Material & Waste	30.2%	39.5%	30.3%	100.0%		0.0%
Water Stress	9.7%	64.0%	26.3%	20.8%	79.2%	0.0%
Toxic Emissions & Waste				2.2%	97.7%	0.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	100.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	38.1%
1.5-2°C	14.6%
2-3°C	11.1%
>3°C	36.3%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Brazil UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
4.3	5.2	4.7	3.2

Portfolio rated 100%
Nb Securities rated 50

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 33%
Orange Flag 7%
Yellow Flag 24%
Green Flag 37%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
138	345	318	Scope 1 reported (vs estimated)	45%
			Scope2 reported (vs estimated)	55%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	33%
Thermal Coal	18%
Natural Gaz	14%
Oil	14%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	390
Gas (MMBOE)	0.0012
Oil (MMBOE)	0.0073

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	293.2
Thermal Coal	711.7
Oil	3 103.1
Gas	396.9
Total	4 504.9

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	711.7
Oil Sands	5.8
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	717.5
Other	3 787.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	19.0%	14.3%	15.5%
Some efforts	73.9%	83.4%	55.9%
Limited efforts/Information	5.5%	1.5%	3.6%
No effort/No evidence	1.6%	0.8%	25.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.4
Low carbon transition management Score	4.9
Operational Transition	37.6%
Production Transition	37.6%
Neutral	43.2%
Solutions	0.8%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	65.3%	Liquid Fuel	0.0%	Natural Gas	26.9%
Nuclear	3.8%	Renewables	2.2%	Thermal Coal	1.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	1%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	23.5%	Energy Efficiency	6.9%	Green Building	0.0%
Pollution Prevention	6.9%	Sustainable Water	0.8%	Sustainable Agriculture	5.5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	0.2%	Green Building	0.0%
Pollution Prevention	0.1%	Sustainable Water	0.2%	Sustainable Agriculture	2.4%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	24%
Flood	5%
Heatwave	18%
Hurricane	3%
WaterStress	26%
Wildfire	24%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.1%	98.5%	1.5%	53.1%	12.3%	34.7%
Carbon Emissions	87.0%	8.4%	4.6%	53.1%	33.2%	13.7%
Electronic Waste	0.5%	90.0%	9.5%	100.0%		
Opportunities in Green Building	87.2%	8.0%	4.8%	100.0%		
Opp's in Renewable Energy	0.6%	99.2%	0.2%	95.6%	2.6%	1.8%
Packaging Material & Waste	90.4%	8.8%	0.8%	87.2%		12.8%
Water Stress	90.1%	9.7%	0.2%	40.1%	24.5%	35.4%
Toxic Emissions & Waste				43.4%	18.7%	37.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	95.7%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,
- An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

<1.5°C	9.7%
1.5-2°C	4.9%
2-3°C	4.1%
>3°C	81.2%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Eastern Europe Ex Russia UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 0%
 Yellow Flag 5%
 Green Flag 95%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
429	851	426	Scope 1 reported (vs estimated)	77%
			Scope2 reported (vs estimated)	70%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	22%
Thermal Coal	9%
Natural Gaz	13%
Oil	13%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	760
Gas (MMBOE)	0.0033
Oil (MMBOE)	0.0015

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	1 388.0
Oil	652.0
Gas	788.6
Total	3 123.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	1 388.0
Oil Sands	0.0
Shale Oil or Shale Gas	361.7
Sum High Impact Reserves	1 749.7
Other	1 373.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	6.9%
Some efforts	54.9%	90.3%	12.2%
Limited efforts/Information	11.1%	3.5%	6.2%
No effort/No evidence	34.0%	6.2%	74.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.6
Low carbon transition management Score	2.7
Operational Transition	14.2%
Production Transition	14.2%
Neutral	73.0%
Solutions	0.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	18.0%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	2.6%	Liquid Fuel	2.0%	Natural Gas	14.3%
Nuclear	22.3%	Renewables	3.8%	Thermal Coal	54.9%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	20.1%	Energy Efficiency	3.6%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.4%	Energy Efficiency	0.2%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	44%
Flood	8%
Heatwave	10%
Hurricane	1%
WaterStress	30%
Wildfire	6%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	5.3%	90.9%	3.9%	82.5%	9.6%	8.0%
Carbon Emissions	0.3%	87.7%	12.0%	79.8%	13.0%	7.3%
Electronic Waste	1.0%	6.5%	92.5%	100.0%		
Opportunities in Green Building	0.4%	87.5%	12.2%	100.0%		
Opp's in Renewable Energy	8.9%	91.0%	0.1%	94.0%	1.7%	4.4%
Packaging Material & Waste	7.6%	7.6%	84.8%	91.6%		8.4%
Water Stress	81.6%	18.1%	0.2%	74.7%	10.1%	15.1%
Toxic Emissions & Waste				72.8%	8.3%	18.9%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	90.8%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	3.8%
--------	------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	21.1%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	6.6%
-------	------

Alignment is measured using a temperature indicator.

>3°C	68.5%
------	-------

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI EM Latin America UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)**1. Description of ESG criteria**

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 22%
Orange Flag 9%
Yellow Flag 26%

152	351	310	Scope 1 reported (vs estimated)	67%
			Scope2 reported (vs estimated)	74%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	24%
Thermal Coal	14%
Natural Gaz	10%
Oil	10%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	236
Gas (MMBOE)	0.0009
Oil (MMBOE)	0.0047

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	177.3
Thermal Coal	430.3
Oil	1 994.0
Gas	278.8
Total	2 883.6

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	430.3
Oil Sands	3.5
Shale Oil or Shale Gas	11.1
Sum High Impact Reserves	444.9
Other	2 438.7

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	13.0%	9.0%	11.5%
Some efforts	78.1%	87.7%	62.2%
Limited efforts/Information	5.4%	1.4%	2.7%
No effort/No evidence	3.0%	1.8%	23.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.6
Low carbon transition management Score	5.0
Operational Transition	31.2%
Production Transition	31.2%
Neutral	52.9%
Solutions	0.5%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	11.8%
--	-------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	63.9%	Liquid Fuel	0.1%	Natural Gas	27.9%
Nuclear	3.4%	Renewables	2.6%	Thermal Coal	2.0%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	20%
20-49.9%	2%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	19.9%	Energy Efficiency	10.6%	Green Building	2.6%
Pollution Prevention	4.2%	Sustainable Water	1.3%	Sustainable Agriculture	4.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.7%	Energy Efficiency	0.3%	Green Building	0.2%
Pollution Prevention	0.0%	Sustainable Water	0.2%	Sustainable Agriculture	1.8%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

2.8%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	21%
Flood	3%
Heatwave	14%
Hurricane	3%
WaterStress	39%
Wildfire	19%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.0%	72.0%	28.0%	61.5%	13.5%	25.0%
Carbon Emissions	56.4%	18.5%	25.0%	58.2%	30.9%	10.9%
Electronic Waste	6.4%	81.2%	12.4%	100.0%	0.0%	
Opportunities in Green Building	56.8%	17.1%	26.1%	99.5%	0.0%	0.4%
Opp's in Renewable Energy	24.8%	74.9%	0.3%	96.3%	2.4%	1.3%
Packaging Material & Waste	87.3%	10.3%	2.4%	81.5%		18.5%
Water Stress	61.2%	14.8%	24.1%	47.3%	21.0%	31.7%
Toxic Emissions & Waste				52.6%	17.6%	29.8%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	97.4%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	15.6%
1.5-2°C	4.9%
2-3°C	4.2%
>3°C	73.2%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Korea UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 53%
Yellow Flag 24%
Green Flag 23%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
102	203	165	Scope 1 reported (vs estimated)	79%
			Scope2 reported (vs estimated)	91%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	1%
Natural Gaz	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	4.4%	5.1%
Some efforts	81.2%	85.8%	69.8%
Limited efforts/Information	4.1%	3.2%	2.6%
No effort/No evidence	14.7%	6.6%	22.5%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.9
Low carbon transition management Score	5.0
Operational Transition	12.6%
Production Transition	12.6%
Neutral	73.3%
Solutions	4.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	0.2%	Liquid Fuel	0.3%	Natural Gas	26.0%
Nuclear	31.6%	Renewables	1.6%	Thermal Coal	40.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	49%
20-49.9%	7%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	14.6%	Energy Efficiency	63.0%	Green Building	0.2%
Pollution Prevention	3.8%	Sustainable Water	7.8%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	4.3%	Green Building	0.1%
Pollution Prevention	0.0%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	22%
Flood	1%
Heatwave	8%
Hurricane	8%
WaterStress	38%
Wildfire	19%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.0%	91.1%	8.9%	75.6%	23.9%	0.5%
Carbon Emissions	0.1%	97.0%	2.9%	72.8%	20.7%	6.5%
Electronic Waste	1.2%	50.0%	48.9%	73.4%	7.5%	19.1%
Opportunities in Green Building	0.2%	92.3%	7.5%	99.3%	0.7%	
Opp's in Renewable Energy	0.6%	87.5%	11.9%	99.4%	0.3%	0.2%
Packaging Material & Waste	12.8%	30.7%	56.5%	89.2%		10.8%
Water Stress	1.7%	98.3%	0.0%	49.5%	43.5%	7.0%
Toxic Emissions & Waste				25.6%	55.3%	19.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	92.2%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	15.0%
1.5-2°C	14.9%
2-3°C	6.5%
>3°C	63.7%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Turkey UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
3.9	3.2	5.9	2.3

Portfolio rated 100%
 Nb Securities rated 11

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

Leaders (AAA,AA) 0%
 Average (A, BBB, BB) 65%
 Laggards (B, CCC) 35%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 0%
 Yellow Flag 0%
 Green Flag 100%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
219	305	336	Scope 1 reported (vs estimated)	18%
			Scope2 reported (vs estimated)	35%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	9%
Thermal Coal	9%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	7.7%
Some efforts	49.8%	83.6%	47.2%
Limited efforts/Information	33.8%	16.4%	0.0%
No effort/No evidence	16.4%	0.0%	45.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.3
Low carbon transition management Score	2.9
Operational Transition	24.1%
Production Transition	24.1%
Neutral	45.9%
Solutions	6.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	9.0%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	58.6%	Liquid Fuel	Natural Gas	41.4%	Nuclear
Renewables		Thermal Coal			

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	14%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	22.6%	Energy Efficiency	20.6%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.8%	Energy Efficiency	0.3%	Green Building	0.0%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	25%
Flood	1%
Heatwave	8%
Hurricane	1%
WaterStress	61%
Wildfire	4%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.5%	99.4%	0.1%	66.4%	33.6%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core Global Inflation-Linked 1-10Y Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.6	5.2	7.9	6.6

Portfolio rated **100%**

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	255	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score **35.9**
Level **Very Low**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.1**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **328.7**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **100%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	3%	97%
IEA SDS 1.65/1.8°C	81%	19%
IEA STEPS 2.7°C	99%	1%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor MSCI Russia UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	70%
Thermal Coal	2%
Natural Gaz	66%
Oil	66%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.2221
Oil (MMBOE)	0.0793

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	956.1
Thermal Coal	0.0
Oil	33 541.2
Gas	71 881.4
Total	106 378.8

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	106
	378.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	2.5%
Some efforts	71.3%	100.0%	29.1%
Limited efforts/Information	6.5%	0.0%	33.5%
No effort/No evidence	22.2%	0.0%	34.9%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	3.7
Low carbon transition management Score	4.2
Operational Transition	16.1%
Production Transition	16.1%
Neutral	25.7%
Solutions	0.0%

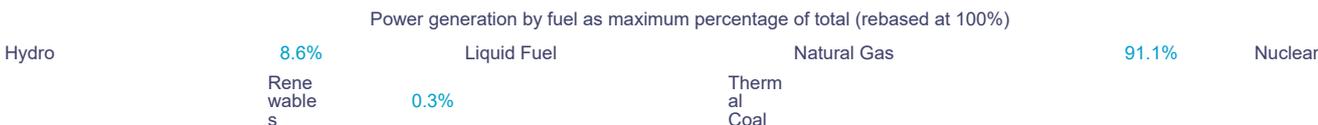

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	48.9%
--	-------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	39.4%	Energy Efficiency	9.3%
Pollution Prevention	0.0%	Sustainable Water	0.0%
		Green Building	0.0%
		Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	0.0%	Energy Efficiency	0.1%
Pollution Prevention	0.0%	Sustainable Water	0.0%
		Green Building	0.0%
		Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	36%
Flood	2%
Heatwave	8%
Hurricane	2%
WaterStress	45%
Wildfire	5%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.7%	98.3%		27.5%	16.8%	55.7%
Carbon Emissions	1.5%	98.3%	0.2%	26.5%	33.6%	39.9%
Electronic Waste	1.8%	97.0%	1.2%	100.0%		
Opportunities in Green Building	1.5%	98.2%	0.3%	100.0%		
Opp's in Renewable Energy	98.4%	1.5%	0.1%	98.8%		1.2%
Packaging Material & Waste	98.8%	0.7%	0.6%	96.3%		3.7%
Water Stress	97.6%	1.7%	0.7%	39.1%	43.4%	17.5%
Toxic Emissions & Waste				28.6%	1.3%	70.2%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	100.0%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	24.0%
1.5-2°C	8.3%
2-3°C	23.8%
>3°C	43.9%

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Europe ESG Leaders (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 (SFDR).

Environmental and/or social characteristics promoted by the Fund are met through the investment process. For further information in relation such characteristics, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

This fund applies an ESG selection.

This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

This fund has been awarded the SRI label. Created by the French Finance Ministry, the "SRI Label" is a guarantee for European investors on the quality and the robustness of the ESG investment process, transparency and reporting. It was issued at the end of a strict labelling process led by an independent accredited labelling body.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

The fund / benchmark index (for an ETF fund) includes a selection of top ranked stocks listed within the eligible universe and chosen from among the most advanced companies in terms of social and environmental responsibility and sustainable development.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some

French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The fund provides exposure to a dynamic allocation of top ESG ranked securities listed. Each component of this fund / index is selected from a universe companies judged to be sustainable and socially responsible from among the components of the Parent Index.

Each member of the fund / index is selected on the basis of corporate social responsibility (CSR) or sustainability criteria.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score

- the environment performance score

- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	19%
Yellow Flag	38%
Green Flag	43%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
43	110	94	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	4%
Thermal Coal	0%
Natural Gaz	4%
Oil	4%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0012
Oil (MMBOE)	0.0010

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	418.8
Gas	388.2
Total	807.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	32.6
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	32.6
Other	774.5

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	7.3%	6.2%	10.0%
Some efforts	88.2%	93.2%	81.4%
Limited efforts/Information	0.8%	0.3%	3.7%
No effort/No evidence	2.7%	0.3%	5.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.1
Low carbon transition management Score	6.3
Operational Transition	3.9%
Production Transition	3.9%
Neutral	82.8%
Solutions	5.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	7.5%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	25.0%	Liquid Fuel	3.6%	Natural Gas	30.4%
Nuclear	13.2%	Renewables	25.1%	Thermal Coal	2.7%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	6%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	17.4%	Energy Efficiency	18.5%	Green Building	1.7%
Pollution Prevention	4.7%	Sustainable Water	6.8%	Sustainable Agriculture	0.9%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.5%	Energy Efficiency	1.9%	Green Building	0.6%
Pollution Prevention	0.4%	Sustainable Water	0.2%	Sustainable Agriculture	0.3%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	31%
Flood	4%
Heatwave	8%
Hurricane	2%
WaterStress	43%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.2%	72.1%	17.7%	87.4%	8.9%	3.8%
Carbon Emissions	1.4%	43.6%	55.0%	80.8%	13.5%	5.6%
Electronic Waste	3.0%	14.5%	82.5%	98.7%	0.2%	1.1%
Opportunities in Green Building	2.0%	51.4%	46.6%	98.6%	1.0%	0.5%
Opp's in Renewable Energy	6.6%	82.8%	10.5%	96.8%	1.3%	1.9%
Packaging Material & Waste	13.0%	40.5%	46.5%	73.7%		26.3%
Water Stress	17.5%	77.7%	4.9%	48.4%	38.4%	13.2%
Toxic Emissions & Waste				41.8%	47.2%	11.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	>3°C
Coverage	97.5%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	16.9%
1.5-2°C	17.9%
2-3°C	19.9%
>3°C	45.4%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	168
Number of Voted Meetings	80
Participation rate at General Meetings	47.6%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	96.7%	2.7%	0.6%
Directors Related	90.0%	10.0%	0.0%
Non-Salary Comp.	92.3%	6.2%	1.5%
Reorg. and Mergers	100.0%	0.0%	0.0%
Shareholders Proposals	0.0%	66.7%	33.3%
Capitalization	94.1%	5.5%	0.4%
Miscellaneous	90.0%	0.0%	10.0%
Other/Misc	100.0%	0.0%	0.0%
Antitakeover Related	40.0%	60.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI Europe ESG Leaders (DR) UCITS ETF fund participated during the financial year.

Germany	21.2%
Ireland	6.2%
Spain	8.8%
Finland	2.5%
Luxembourg	1.2%
Netherlands	13.8%
France	26.2%
Italy	3.8%
Belgium	5.0%
United Kingdom	10.0%
Austria	1.2%

Engagement

This fund is part of the following campaigns: Corporate Governance, ESG, General meeting

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	31
Number of engagement	54
Number of companies under engagement / Number of companies in the fund	16%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

France	52%
Italy	7%
Netherlands	4%
Spain	9%
Germany	11%
Austria	2%
Belgium	4%
United Kingdom	6%
Sweden	4%
Finland	2%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

General Meeting	24%
ESG	39%
Responsible Cleantech	6%
Corporate Governance Roadshow	11%
Plastic & Circular Economy	17%
Climate Action 100+	4%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Green Bond ESG Screened (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastic and circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, ESG

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer

involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.2	6.0	6.1	6.3

Portfolio rated 97%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
 Orange Flag 5%
 Yellow Flag 11%
 Green Flag 53%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	95%
11	165	155	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	97%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	0%
Natural Gaz	1%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.6
Total	0.6

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.6

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	8.5%	1.1%	1.0%
Some efforts	40.1%	61.7%	43.6%
Limited efforts/Information	3.0%	4.8%	4.3%
No effort/No evidence	15.0%	1.7%	20.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	4.5
Low carbon transition management Score	3.7
Operational Transition	3.4%
Production Transition	3.4%
Neutral	58.9%
Solutions	5.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	20.0%	Liquid Fuel	16.8%	Natural Gas	30.9%
Nuclear		Renewables	32.0%	Thermal Coal	0.4%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	10%
20-49.9%	6%
50-100%	6%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.5%	Energy Efficiency	12.9%	Green Building	6.7%
Pollution Prevention	0.4%	Sustainable Water	1.0%	Sustainable Agriculture	0.4%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.1%	Energy Efficiency	2.7%	Green Building	2.7%
Pollution Prevention	0.0%	Sustainable Water	0.0%	Sustainable Agriculture	0.3%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers in portfolio

Score 52.0

Level Medium

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score 7.5

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	27%
Flood	2%
Heatwave	8%
Hurricane	4%
WaterStress	45%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.6%	77.2%	12.2%	86.8%	12.3%	0.9%
Carbon Emissions	2.6%	30.6%	66.8%	76.9%	22.3%	0.8%
Electronic Waste	2.5%	6.3%	91.2%	98.6%		1.4%
Opportunities in Green Building	3.1%	31.0%	65.9%	93.4%	1.6%	5.0%
Opp's in Renewable Energy	5.3%	69.3%	25.4%	94.4%	4.6%	1.1%

Water Stress	22.0%	68.8%	9.1%	76.5%	20.8%	2.6%
Toxic Emissions & Waste				79.5%	18.2%	2.3%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Engagement

This fund is part of the following campaigns: Climate Action 100+, ESG

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	8
Number of engagement	11
Number of companies under engagement / Number of companies in the fund	16%

Breakdown by country

Lyxor MSCI Emerging Markets Ex China UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%
Orange Flag 15%
Yellow Flag 16%
Green Flag 65%

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
161	411	379	Scope 1 reported (vs estimated)	87%
			Scope2 reported (vs estimated)	88%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	13%
Thermal Coal	4%
Natural Gaz	9%
Oil	9%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	1 137
Gas (MMBOE)	0.0102
Oil (MMBOE)	0.0045

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	686.6
Thermal Coal	2 075.9
Oil	1 910.1
Gas	3 282.7
Total	7 963.6

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	2 075.9
Oil Sands	0.3
Shale Oil or Shale Gas	11.6
Sum High Impact Reserves	2 087.8
Other	5 875.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.7%	2.2%	4.6%
Some efforts	77.2%	89.2%	55.0%
Limited efforts/Information	6.5%	2.6%	4.3%
No effort/No evidence	14.4%	5.8%	36.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.7
Low carbon transition management Score	4.1
Operational Transition	15.8%
Production Transition	15.8%
Neutral	70.0%
Solutions	2.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	7.1%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	14.7%	Liquid Fuel	2.1%	Natural Gas	40.3%
Nuclear	5.6%	Renewables	3.4%	Thermal Coal	33.9%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	2%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	12.4%	Energy Efficiency	36.3%	Green Building	1.4%
Pollution Prevention	4.1%	Sustainable Water	2.5%	Sustainable Agriculture	0.8%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.4%	Energy Efficiency	2.2%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.2%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	20%
Flood	2%
Heatwave	10%
Hurricane	14%
WaterStress	39%
Wildfire	12%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.4%	70.2%	27.4%	74.6%	17.2%	8.2%
Carbon Emissions	13.9%	79.2%	6.9%	59.7%	29.4%	10.9%
Electronic Waste	16.1%	45.9%	38.0%	92.6%	1.6%	5.8%
Opportunities in Green Building	13.7%	70.9%	15.4%	98.9%	0.8%	0.3%
Opp's in Renewable Energy	23.8%	53.3%	22.9%	98.1%	0.7%	1.2%
Packaging Material & Waste	51.9%	25.0%	23.1%	90.9%		9.1%
Water Stress	16.8%	40.9%	42.3%	48.2%	37.6%	14.2%
Toxic Emissions & Waste				43.7%	35.9%	20.5%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	2.3°C
Coverage	95.8%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight

- A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,
- An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

<1.5°C	14.4%
1.5-2°C	13.7%
2-3°C	8.8%
>3°C	62.9%

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Core Global Government Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Financials	11.5%		70.4%	12.8%				

Leaders (AAA,AA) 11%
 Average (A, BBB, BB) 89%
 Laggards (B, CCC) 0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	254	Scope 1 reported (vs estimated)	0%
			Scope2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer’s carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies’ indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio’s exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **37.3**
Level **Very Low**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.1**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **340.6**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **98%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	7%	93%
IEA SDS 1.65/1.8°C	83%	17%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials			100.0%						0%	100%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO₂e/\$M invested	Carbon Intensity tons CO₂e/\$M sales	Weighted Average Carbon Intensity tons CO₂e/\$M sales	Portfolio rated by weight	100%
0	0	253	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **42.5**
Level **Low**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.1**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **389.0**
Level **Extremely vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **100%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	0%	100%
IEA SDS 1.65/1.8°C	100%	0%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor US Curve Steepening 2-10 UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor MSCI USA ESG Climate Transition CTB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: No

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 23%
Yellow Flag 25%
Green Flag 52%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	1%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.7%	3.5%	5.4%
Some efforts	81.7%	92.4%	66.5%
Limited efforts/Information	6.9%	1.6%	3.9%
No effort/No evidence	7.7%	2.5%	24.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.6
Operational Transition	2.0%
Production Transition	2.0%
Neutral	78.3%
Solutions	14.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	0.2%	Liquid Fuel	0.1%	Natural Gas	46.7%
Nuclear	22.3%	Renewables	28.7%	Thermal Coal	1.9%

Share of issuers in terms of power generation in portfolio	1.8%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	13.1%	Energy Efficiency	39.3%	Green Building	4.7%
Pollution Prevention	10.8%	Sustainable Water	8.3%	Sustainable Agriculture	0.6%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	18%
50-100%	5%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.4%	Energy Efficiency	7.5%	Green Building	1.0%
Pollution Prevention	1.6%	Sustainable Water	0.8%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

12.5%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	1%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.3%	32.4%	67.3%	89.8%	10.1%	0.1%
Carbon Emissions	0.2%	28.3%	71.5%	80.3%	19.0%	0.6%
Electronic Waste	0.4%	7.3%	92.4%	92.8%	0.7%	6.6%
Opportunities in Green Building	0.3%	39.1%	60.6%	97.7%	0.7%	1.6%
Opp's in Renewable Energy	1.5%	92.2%	6.3%	98.4%	0.6%	1.0%
Packaging Material & Waste	7.1%	81.2%	11.7%	90.7%		9.3%
Water Stress	5.1%	92.5%	2.4%	59.9%	36.3%	3.8%
Toxic Emissions & Waste				59.0%	34.7%	6.3%

Temperature – Alignment of the portfolio with the Paris Agreement

Stock selection is based on data from MSCI's ESG Research. For more information, we invite you to visit www.msci.com.

The index aims to represent the performance of an investment strategy that re-weights securities based upon the opportunities and risks associated with the transition to a lower carbon economy.

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI USA ESG Climate Transition CTB (DR) UCITS ETF fund participated during the financial year.

Engagement

This fund is part of the following campaigns: No

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	3
Number of engagement	4
Number of companies under engagement / Number of companies in the fund	1%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Ireland	50%
USA	50%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

ESG	75%
Responsible Cleantech	25%

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI EM ESG Climate Transition CTB UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

The fund applies on fund holdings an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.

- The second campaign related to plastic and circular economy.

- The third campaign related to localized water management.

- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: No

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).

- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns

- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.

- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.

- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

(i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;

(ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The exclusion described above is applied to the fund holdings.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production

functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
5.0	5.8	5.2	4.2

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 13%
Yellow Flag 20%
Green Flag 67%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
28	99	97	Scope 1 reported (vs estimated)	93%
			Scope2 reported (vs estimated)	81%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	0%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.3
Gas	1.3
Total	2.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.6
Sum High Impact Reserves	0.6
Other	1.4

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.1%	2.8%	4.8%
Some efforts	76.8%	88.3%	47.7%
Limited efforts/Information	6.3%	3.5%	1.0%
No effort/No evidence	15.4%	5.2%	46.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.6
Low carbon transition management Score	4.5
Operational Transition	5.2%
Production Transition	5.2%
Neutral	78.1%
Solutions	14.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	2.1%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel	Natural Gas	15.3%	Nuclear
Renewables	79.6%	Thermal Coal	5.1%	

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	8%
50-100%	10%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	20.2%	Energy Efficiency	47.9%	Green Building	1.7%
Pollution Prevention	6.0%	Sustainable Water	7.0%	Sustainable Agriculture	0.1%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	5.4%	Energy Efficiency	5.9%	Green Building	0.4%
Pollution Prevention	0.5%	Sustainable Water	0.5%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

12.7%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	21%
Flood	2%
Heatwave	8%
Hurricane	9%
WaterStress	47%
Wildfire	11%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.6%	54.3%	45.1%	85.1%	13.6%	1.3%
Carbon Emissions	6.9%	87.3%	5.8%	74.8%	22.6%	2.6%
Electronic Waste	9.2%	29.0%	61.8%	90.4%	2.1%	7.5%
Opportunities in Green Building	7.1%	81.4%	11.4%	97.9%	1.2%	0.9%
Opp's in Renewable Energy	11.0%	45.3%	43.7%	99.1%	0.3%	0.6%
Packaging Material & Waste	60.1%	22.2%	17.7%	91.3%	0.1%	8.6%
Water Stress	9.8%	63.2%	27.0%	49.5%	42.6%	8.0%
Toxic Emissions & Waste				47.6%	40.6%	11.8%

Temperature – Alignment of the portfolio with the Paris Agreement

Stock selection is based on data from MSCI's ESG Research. For more information, we invite you to visit www.msci.com.

The index aims to represent the performance of an investment strategy that re-weights securities based upon the opportunities and risks associated with the transition to a lower carbon economy.

Engagement

This fund is part of the following campaigns: No

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	4
Number of engagement	6
Number of companies under engagement / Number of companies in the fund	14%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	17%
Germany	83%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

General Meeting	17%
ESG	50%
Plastic & Circular Economy	33%

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI Europe ESG Climate Transition CTB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.2	6.9	6.0	5.9

Portfolio rated 100%
Nb Securities rated 215

Pillars	Corporate			Government		
	Themes	Score	Weight	Themes	Score	Weight

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 18%
Yellow Flag 27%
Green Flag 54%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
18	47	63	Scope 1 reported (vs estimated)	97%
			Scope2 reported (vs estimated)	93%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	0%
Natural Gaz	2%
Oil	2%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0004
Oil (MMBOE)	0.0003

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	118.1
Gas	126.1
Total	244.1

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	8.9
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	8.9
Other	235.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	9.6%	3.7%	12.5%
Some efforts	84.6%	94.3%	75.9%
Limited efforts/Information	0.9%	1.1%	6.8%
No effort/No evidence	1.0%	0.0%	4.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	6.6
Operational Transition	5.8%
Production Transition	5.8%
Neutral	77.5%
Solutions	13.4%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	29.5%	Liquid Fuel	0.0%	Natural Gas	12.4%
Nuclear	12.1%	Renewables	44.9%	Thermal Coal	1.1%

Share of issuers in terms of power generation in portfolio	5.0%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	20.9%	Energy Efficiency	30.0%	Green Building	5.0%
Pollution Prevention	6.6%	Sustainable Water	12.1%	Sustainable Agriculture	0.8%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	25%
20-49.9%	8%
50-100%	10%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	4.9%	Energy Efficiency	2.6%	Green Building	1.6%
Pollution Prevention	1.1%	Sustainable Water	0.9%	Sustainable Agriculture	0.2%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

11.2%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	32%
Flood	3%
Heatwave	8%
Hurricane	3%
WaterStress	43%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	11.5%	71.6%	16.8%	85.1%	13.2%	1.8%
Carbon Emissions	0.4%	40.7%	58.9%	80.5%	17.1%	2.3%
Electronic Waste	1.7%	11.9%	86.4%	98.6%	0.3%	1.2%
Opportunities in Green Building	1.0%	48.1%	50.9%	96.1%	2.5%	1.4%
Opp's in Renewable Energy	6.3%	81.7%	12.0%	93.3%	4.2%	2.5%
Packaging Material & Waste	11.9%	37.6%	50.5%	78.3%		21.7%
Water Stress	23.4%	71.5%	5.1%	48.9%	34.8%	16.3%
Toxic Emissions & Waste				44.1%	47.8%	8.2%

Temperature – Alignment of the portfolio with the Paris Agreement

Stock selection is based on data from MSCI's ESG Research. For more information, we invite you to visit www.msci.com.

The index aims to represent the performance of an investment strategy that re-weights securities based upon the opportunities and risks associated with the transition to a lower carbon economy.

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	337
Number of Voted Meetings	149
Participation rate at General Meetings	44.2%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	91.7%	8.3%	0.0%
Antitakeover Related	57.1%	42.9%	0.0%
Routine/Business	95.0%	4.6%	0.3%
Capitalization	91.1%	8.6%	0.2%
Directors Related	90.5%	9.5%	0.0%
Non-Salary Comp.	90.2%	8.3%	1.5%
Shareholders Proposals	33.3%	55.6%	11.1%
Miscellaneous	90.9%	0.0%	9.1%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI Europe ESG Climate Transition CTB (DR) UCITS ETF fund participated during the financial year.

France	24.2%
Ireland	4.7%
Germany	30.2%
Netherlands	12.1%
Finland	2.7%
Spain	8.7%
Luxembourg	2.0%
Italy	4.0%
Belgium	5.4%
Austria	1.3%
United Kingdom	4.7%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	29
Number of engagement	53
Number of companies under engagement / Number of companies in the fund	14%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Belgium	8%
France	51%
Italy	2%
Spain	13%
Germany	13%
Austria	2%
United Kingdom	6%
Sweden	4%
Finland	2%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

Localized Water Management	4%
General Meeting	21%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor MSCI World Climate Change (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies;
- (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
21	80	74	Scope 1 reported (vs estimated)	92%
			Scope2 reported (vs estimated)	85%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	1%
Natural Gaz	1%
Oil	1%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0001
Oil (MMBOE)	0.0001

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	15.2
Thermal Coal	0.6
Oil	69.7
Gas	23.4
Total	118.5

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.6
Oil Sands	26.9
Shale Oil or Shale Gas	21.8
Sum High Impact Reserves	49.4
Other	69.1

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.8%	4.3%	2.7%
Some efforts	81.5%	90.2%	72.5%
Limited efforts/Information	4.3%	2.2%	1.8%
No effort/No evidence	8.2%	3.3%	23.0%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.7
Operational Transition	3.5%
Production Transition	3.5%
Neutral	78.7%
Solutions	16.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	11.4%	Liquid Fuel	0.6%	Natural Gas	30.8%
Nuclear	22.8%	Renewables	18.8%	Thermal Coal	15.6%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	20%
20-49.9%	11%
50-100%	6%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	12.4%	Energy Efficiency	35.6%	Green Building	2.7%
Pollution Prevention	4.0%	Sustainable Water	4.1%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.1%	Energy Efficiency	8.2%	Green Building	0.4%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.1%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	5%
WaterStress	45%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.3%	44.3%	53.4%	92.5%	6.4%	1.1%
Carbon Emissions	0.4%	29.3%	70.3%	82.4%	16.3%	1.3%
Electronic Waste	1.2%	7.3%	91.4%	93.5%	0.6%	5.8%
Opportunities in Green Building	1.1%	40.6%	58.3%	97.9%	1.3%	0.8%
Opp's in Renewable Energy	2.7%	86.5%	10.8%	98.6%	0.7%	0.8%
Packaging Material & Waste	9.0%	71.7%	19.3%	87.4%		12.6%
Water Stress	8.0%	89.4%	2.6%	61.4%	32.2%	6.4%
Toxic Emissions & Waste				57.0%	34.4%	8.6%

Temperature – Alignment of the portfolio with the Paris Agreement

Stock selection is based on data from MSCI's ESG Research. For more information, we invite you to visit www.msci.com.

The index aims to represent the performance of an investment strategy that re-weights securities based upon the opportunities and risks associated with the transition to a lower carbon economy.

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	1 343
Number of Voted Meetings	335
Participation rate at General Meetings	24.9%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	85.7%	14.3%	0.0%
Antitakeover Related	76.9%	23.1%	0.0%
Routine/Business	96.0%	3.7%	0.3%
Capitalization	91.1%	8.7%	0.2%
Directors Related	93.3%	5.7%	0.0%
Non-Salary Comp.	87.3%	11.6%	1.1%
Shareholders Proposals	76.6%	18.2%	5.2%
Miscellaneous	91.3%	0.0%	8.7%
Other/Misc	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI World Climate Change (DR) UCITS ETF fund participated during the financial year.

France	11.0%
Ireland	2.7%
USA	24.2%
Germany	13.4%
Netherlands	5.4%
Finland	1.2%
Spain	3.9%
Japan	29.3%
Luxembourg	0.9%
Italy	1.8%
Belgium	2.4%
Austria	0.6%
United Kingdom	3.3%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	73
Number of engagement	112
Number of companies under engagement / Number of companies in the fund	5%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	4%
France	40%
Belgium	4%
Italy	4%
Spain	10%
Germany	16%
Ireland	2%
Austria	1%
United Kingdom	4%
Sweden	2%
Finland	1%
USA	8%
Japan	4%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

General Meeting	18%
Climate Action 100+	4%
ESG	43%
Localized Water Management	2%
Responsible Cleantech	7%
Corporate Governance Roadshow	12%
Plastic & Circular Economy	13%

Disclaimer

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Net Zero 2050 S&P Eurozone Climate PAB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 25%
Yellow Flag 31%
Green Flag 44%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
10	31	29	Scope 1 reported (vs estimated)	86%
			Scope2 reported (vs estimated)	86%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.7%	0.4%	5.8%
Some efforts	91.4%	96.8%	85.6%
Limited efforts/Information	0.3%	0.5%	1.5%
No effort/No evidence	4.1%	2.1%	7.1%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	6.1
Operational Transition	1.8%
Production Transition	1.8%
Neutral	85.1%
Solutions	4.1%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	27.4%	Liquid Fuel	1.4%	Natural Gas	12.1%
Nuclear	30.8%	Renewables	26.6%	Thermal Coal	1.7%

Share of issuers in terms of power generation in portfolio	1.6%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.6%	Energy Efficiency	27.2%	Green Building	2.6%
Pollution Prevention	7.0%	Sustainable Water	3.7%	Sustainable Agriculture	0.0%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	8%
50-100%	2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.0%	Energy Efficiency	3.4%	Green Building	0.2%
Pollution Prevention	0.3%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

4.9%

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	4%
Coldwave	31%
Flood	2%
Heatwave	8%
Hurricane	2%
WaterStress	46%
Wildfire	7%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.0%	76.2%	13.8%	94.7%	5.2%	0.1%
Carbon Emissions	0.9%	47.7%	51.5%	91.6%	7.8%	0.5%
Electronic Waste	1.4%	14.3%	84.2%	99.7%	0.2%	0.1%
Opportunities in Green Building	1.3%	57.3%	41.4%	97.9%	2.1%	0.0%
Opp's in Renewable Energy	5.4%	82.1%	12.4%	98.2%	1.0%	0.8%
Packaging Material & Waste	8.4%	36.9%	54.7%	86.8%		13.2%
Water Stress	10.7%	82.4%	6.9%	65.1%	30.0%	4.9%
Toxic Emissions & Waste				54.7%	38.2%	7.1%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	95.8%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

<1.5°C	29.4%
--------	-------

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

1.5-2°C	18.7%
---------	-------

Each approach allocates carbon budget from global to company level over a chosen time horizon.

2-3°C	19.5%
-------	-------

Alignment is measured using a temperature indicator.

>3°C	32.4%
------	-------

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	185
Number of Voted Meetings	103
Participation rate at General Meetings	55.7%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	89.5%	10.5%	0.0%
Antitakeover Related	33.3%	66.7%	0.0%
Routine/Business	95.0%	5.0%	0.0%
Capitalization	88.5%	11.1%	0.4%
Directors Related	85.8%	14.2%	0.0%
Non-Salary Comp.	87.8%	10.8%	1.4%
Shareholders Proposals	42.9%	42.9%	14.3%
Miscellaneous	93.8%	0.0%	6.2%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Net Zero 2050 S&P Eurozone Climate PAB (DR) UCITS ETF fund participated during the financial year.

France	22.3%
Ireland	4.9%
Germany	27.2%
Finland	3.9%
Austria	3.9%
Spain	11.7%
Luxembourg	1.9%
Netherlands	10.7%
Italy	6.8%
Portugal	1.0%
Belgium	5.8%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	32
Number of engagement	47
Number of companies under engagement / Number of companies in the fund	25%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	6%
France	43%
Italy	9%
Germany	26%
Spain	15%
Austria	2%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

ESG	47%
General Meeting	23%

Lyxor Net Zero 2050 S&P 500 Climate PAB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	44%
Yellow Flag	18%
Green Flag	38%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
4	15	18	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	89%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	11.2%	8.4%	0.9%
Some efforts	82.6%	90.0%	86.3%
Limited efforts/Information	2.4%	0.9%	0.2%
No effort/No evidence	3.6%	0.7%	12.6%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.5
Low carbon transition management Score	5.7
Operational Transition	0.5%
Production Transition	0.5%
Neutral	92.9%
Solutions	5.2%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	0.1%
--	------

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	0.5%	Liquid Fuel	0.2%	Natural Gas	8.2%
Nuclear	66.2%	Renewables	1.6%	Thermal Coal	23.3%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	20%
20-49.9%	6%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	3.3%	Energy Efficiency	29.1%	Green Building	1.4%
Pollution Prevention	1.3%	Sustainable Water	1.1%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.2%	Energy Efficiency	5.2%	Green Building	0.1%
Pollution Prevention	0.1%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	21%
Flood	2%
Heatwave	7%
Hurricane	3%
WaterStress	49%
Wildfire	16%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	0.5%	33.7%	65.8%	95.7%	4.1%	0.1%
Carbon Emissions	0.2%	30.6%	69.3%	88.0%	12.0%	0.0%
Electronic Waste	0.4%	10.2%	89.4%	91.4%	1.2%	7.4%
Opportunities in Green Building	0.2%	44.6%	55.2%	98.9%	0.5%	0.6%
Opp's in Renewable Energy	2.2%	91.6%	6.2%	99.9%	0.1%	0.0%
Packaging Material & Waste	6.7%	77.7%	15.6%	89.6%		10.4%
Water Stress	1.9%	96.7%	1.4%	69.5%	28.1%	2.4%
Toxic Emissions & Waste				61.0%	36.0%	3.0%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	99.2%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	44.5%
1.5-2°C	22.9%
2-3°C	9.1%
>3°C	23.5%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	355
Number of Voted Meetings	62
Participation rate at General Meetings	17.5%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Directors Related	94.3%	4.4%	0.0%
Routine/Business	100.0%	0.0%	0.0%
Non-Salary Comp.	73.8%	26.2%	0.0%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Lyxor Net Zero 2050 S&P Europe Climate PAB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 30%
Yellow Flag 28%
Green Flag 40%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	99%
20	73	51	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	90%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.3
Total	0.3

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.3

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.4%	1.4%	5.0%
Some efforts	88.8%	94.9%	85.1%
Limited efforts/Information	1.1%	2.1%	1.7%
No effort/No evidence	3.6%	1.4%	8.2%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.2
Low carbon transition management Score	6.2
Operational Transition	6.5%
Production Transition	6.5%
Neutral	84.9%
Solutions	4.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	27.7%	Liquid Fuel	0.2%	Natural Gas	11.9%
Nuclear	25.9%	Renewables	33.0%	Thermal Coal	1.3%

Share of issuers in terms of power generation in portfolio 1.2%

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	16%
20-49.9%	4%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.7%	Energy Efficiency	19.0%	Green Building	2.9%
Pollution Prevention	4.2%	Sustainable Water	5.3%	Sustainable Agriculture	0.3%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	1.4%	Energy Efficiency	1.7%	Green Building	0.5%
Pollution Prevention	0.2%	Sustainable Water	0.2%	Sustainable Agriculture	0.2%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

% estimated EU Taxo

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	3%
Coldwave	31%
Flood	4%
Heatwave	8%
Hurricane	2%
WaterStress	44%
Wildfire	8%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	10.1%	70.0%	19.9%	93.9%	5.9%	0.2%
Carbon Emissions	0.6%	42.3%	57.1%	86.0%	13.0%	1.1%
Electronic Waste	1.1%	14.2%	84.7%	98.9%	0.2%	0.9%
Opportunities in Green Building	1.5%	49.0%	49.5%	97.8%	2.0%	0.3%
Opp's in Renewable Energy	4.9%	84.4%	10.6%	99.0%	0.4%	0.6%
Packaging Material & Waste	10.0%	43.2%	46.7%	70.3%		29.7%
Water Stress	17.5%	79.2%	3.2%	51.3%	38.2%	10.5%
Toxic Emissions & Waste				43.3%	51.9%	4.8%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	94.7%

LYXOR's methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
<1.5°C	29.4%
1.5-2°C	21.5%
2-3°C	16.8%
>3°C	32.3%

–A sectoral approach: "Sectoral Decarbonisation Approach" (SDA) for homogeneous sectors,

–An economic approach: "Greenhouse gas Emissions per unit of Value Added" (GEVA) for heterogeneous sectors.

Each approach allocates carbon budget from global to company level over a chosen time horizon.

Alignment is measured using a temperature indicator.

For more information on the methodology applied by LYXOR:

<https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	242
Number of Voted Meetings	101
Participation rate at General Meetings	41.7%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	88.9%	11.1%	0.0%
Antitakeover Related	50.0%	50.0%	0.0%

Miscellaneous	93.8%	0.0%	6.2%
Other/Misc	100.0%	0.0%	0.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Net Zero 2050 S&P Europe Climate PAB (DR) UCITS ETF fund participated during the financial year.

France	21.8%
Ireland	5.0%
Germany	26.7%
Finland	3.0%
Austria	4.0%
Spain	10.9%
Luxembourg	2.0%
Netherlands	10.9%
Italy	6.9%
Belgium	5.9%
United Kingdom	3.0%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	33
Number of engagement	46
Number of companies under engagement / Number of companies in the fund	12%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Netherlands	7%
France	46%
Italy	2%
Germany	26%
Spain	11%
Austria	2%
Sweden	4%
United Kingdom	2%

Breakdown by engagement campaigns carried out by the fund over the year

For the year, the fund participated in the various engagement campaigns presented below and conducted by Lyxor.

For more details on Lyxor's engagement activities, an annual report is available on the Lyxor website: <https://www.lyxor.com/en/socially-responsible-investment>

ESG	46%
General Meeting	26%
Corporate Governance Roadshow	17%
Plastic & Circular Economy	11%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Net Zero 2050 S&P World Climate PAB (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

- French, German & Luxembourgish Funds (Fonds Communs de Placement – FCP) and SICAV (*)
- Securities of issuers domiciled in Europe: in order to prevent excessive costs inherent in the voting process, Lyxor participates in general meetings when the consolidated holding represents more than 0.10% of the company's capital
- Securities of issuers domiciled in the United States: Lyxor will exercise its right to vote on its largest consolidated holdings
- Securities of issuers domiciled in Japan: Lyxor will exercise its right to vote on its largest consolidated holdings

(*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership.

In terms of engagement, Lyxor has defined an engagement policy that is structured around three axes: an engagement related to general meetings, an engagement related to environmental, social and/or governance issues, and an engagement related to climate. This third axis comprises four engagement campaigns:

- The first campaign related to the Climate Action 100+ initiative, committing Lyxor to ask companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosure) recommendations.
- The second campaign related to plastic and circular economy.
- The third campaign related to localized water management.
- The fourth campaign related to responsible cleantech.

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund applies on the financial exposure an exclusion of issuers associated with serious and repeated violations of the United Nations Global Compact Principles and regulatory requirements related to controversial sectors and products. This exclusion list is completed by a list of firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs, depleted uranium weapons).

LYXOR also excludes companies involved in activities or sectors deemed as controversial and/or having the majority of their income from sector with important ESG risk (weapons, gambling, tobacco, nuclear, coal...).

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethical data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

In addition to the internal analysis carried out, Lyxor uses the services of ISS (Institutional Shareholder Services), as a proxy advisor.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

Engagement policy:

To carry out its engagement campaigns, Lyxor can:

- (i) organize one-on-one meetings with management, board members, investor relations, sustainable development teams or any person within the company who can provide answers to the issue;
- (ii) partner with other management companies to gain greater leverage with targeted companies; (iii) join working groups or initiatives specializing in certain areas.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The exclusion described above is applied to the financial exposure of the fund.

In terms of engagement, the details are presented below.

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%
Orange Flag 36%
Yellow Flag 22%
Green Flag 41%

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
9	36	30	Scope 1 reported (vs estimated)	96%
			Scope2 reported (vs estimated)	85%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.2
Total	0.2

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.2

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	9.3%	6.1%	1.6%
Some efforts	78.7%	88.1%	81.0%
Limited efforts/Information	3.5%	2.2%	0.5%
No effort/No evidence	8.3%	3.5%	16.8%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	6.4
Low carbon transition management Score	5.6
Operational Transition	1.9%
Production Transition	1.9%
Neutral	88.8%
Solutions	5.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	26.2%	Liquid Fuel	1.5%	Natural Gas	23.6%
Nuclear	13.6%	Renewables	32.1%	Thermal Coal	3.0%

Share of issuers in terms of power generation in portfolio	1.6%
--	------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	19%
20-49.9%	7%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions					
Alternative Energy	6.1%	Energy Efficiency	26.8%	Green Building	2.2%
Pollution Prevention	2.2%	Sustainable Water	2.1%	Sustainable Agriculture	0.2%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution					
Alternative Energy	0.5%	Energy Efficiency	4.3%	Green Building	0.3%
Pollution Prevention	0.2%	Sustainable Water	0.1%	Sustainable Agriculture	0.0%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	2%
Coldwave	23%
Flood	2%
Heatwave	7%
Hurricane	4%
WaterStress	47%
Wildfire	14%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company’s business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company’s geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.0%	46.9%	50.1%	94.6%	5.3%	0.2%
Carbon Emissions	0.3%	31.2%	68.4%	86.7%	13.0%	0.3%
Electronic Waste	1.1%	9.9%	89.0%	93.7%	0.6%	5.6%
Opportunities in Green Building	1.0%	43.1%	55.9%	98.2%	1.2%	0.5%
Opp's in Renewable Energy	3.3%	86.3%	10.4%	99.5%	0.2%	0.2%
Packaging Material & Waste	8.9%	67.7%	23.4%	85.9%		14.1%
Water Stress	7.9%	89.8%	2.3%	64.1%	31.6%	4.4%
Toxic Emissions & Waste				57.2%	38.1%	4.7%

Temperature – Alignment of the portfolio with the Paris Agreement

Measures the alignment of the fund against different climate scenarios that target different global temperature increases, including goals of the Paris Agreement (well below 2°C, and pursuing efforts to limit the increase to 1.5°C).

Alignment Degree	<1.5°C
Coverage	96.8%

LYXOR’s methodology can be applied to all sectors of a portfolio and is based on Trucost raw data. The methodology combines two approaches recommended by the Science-Based Targets initiative (SBTi):

Alignment Trajectory in % Weight	
----------------------------------	--

–A sectoral approach: “Sectoral Decarbonisation Approach” (SDA) for homogeneous sectors,

<1.5°C	36.1%
--------	-------

–An economic approach: “Greenhouse gas Emissions per unit of Value Added” (GEVA) for heterogeneous sectors.

1.5-2°C	20.6%
---------	-------

Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

Meeting overview

This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	700
Number of Voted Meetings	212
Participation rate at General Meetings	30.3%

Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Reorg. and Mergers	81.8%	18.2%	0.0%
Antitakeover Related	73.7%	26.3%	0.0%
Routine/Business	96.6%	3.4%	0.0%
Capitalization	90.8%	8.8%	0.4%
Directors Related	94.0%	5.4%	0.0%
Non-Salary Comp.	86.1%	12.9%	1.0%
Shareholders Proposals	75.8%	18.8%	5.5%
Miscellaneous	92.3%	0.0%	7.7%
Other/Misc	100.0%	0.0%	0.0%
Social Proposal	50.0%	25.0%	25.0%

Breakdown by country

In 2021, the Lyxor' voting scope was issuers domiciled in Europe, in United States and in Japan.

The data details the geographical distribution of the General Meetings at which the Lyxor Net Zero 2050 S&P World Climate PAB (DR) UCITS ETF fund participated during the financial year.

France	9.9%
Ireland	1.4%
USA	29.7%
Germany	10.8%
Finland	0.9%
Spain	4.2%
Japan	31.1%
Netherlands	4.7%
Italy	3.3%
Belgium	1.4%
United Kingdom	0.9%
Austria	0.9%
Luxembourg	0.5%

Engagement

This fund is part of the following campaigns: Climate Action 100+, Corporate Governance, ESG, General meeting

Climate Action 100+: In 2018, Lyxor joined the Climate Action 100+, an international initiative led by investors to engage systemically with important greenhouse gas emitters and other companies across the global economy that have significant opportunities to drive the clean energy transition and help achieve the goals of the Paris Agreement.

Through this initiative, Lyxor aims to obtain commitments from the Boards of Directors or Supervisory Boards and/or key executives in order to:

1. Implement a strong governance framework that clearly articulates the Board's responsibility and oversight for climate risks;
2. Take action to reduce greenhouse gas emissions across the value chain, in line with the Paris Agreement's goal of limiting global average temperature increase to well below 2°C above pre-industrial levels and to move, as far as possible, to a 1.5°C trajectory. This implies the ambition to achieve the goal of carbon neutrality (net zero emissions) by 2050;
3. Improve reporting in accordance with the final recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and the Global Investor Coalition on Climate Change (if applicable) to enable investors to assess the robustness of corporate strategies against a range of climate scenarios, including well below 2°C, and to improve investment decision-making.

ESG: The consideration of environmental, social and/or governance issues is at the heart of Lyxor's responsible investor strategy. Lyxor therefore considers that it is the responsibility of the Board to supervise the definition of the company's non-financial and climate risks and opportunities, as well as the strategy implemented by management with regards to this risk/opportunity analysis. The objective of Lyxor on this type of engagement is to work with companies to encourage them to improve their Corporate Social Responsibility practices.

Corporate Governance: Outside the general assembly period, Lyxor promotes regular dialogue with companies on corporate governance issues such as changes in the composition of the Board and its committees, succession plans, the role and functions of the lead director, changes in the remuneration policy, etc.

Engagement overview over the year

The table shows the number of engagement campaigns conducted by Lyxor during the year compared to the number of issuers present in the fund.

Number of companies under engagement	43
Number of engagement	61
Number of companies under engagement / Number of companies in the fund	6%

Breakdown by country

The data present the geographical breakdown of the issuers concerned by an engagement campaign over the financial year by the fund.

Lyxor Core Euro Government Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO_{2e} / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

ESG score	Environmental	Social	Governance
6.6	4.2	7.8	7.2

Breakdown of companies according to their ESG rating

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		28.8%	33.5%	37.7%					29%	71%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency. All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO₂e/\$M invested	Carbon Intensity tons CO₂e/\$M sales	Weighted Average Carbon Intensity tons CO₂e/\$M sales	Portfolio rated by weight	100%
0	0	205	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO₂e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO₂e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO₂e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO₂e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO₂ emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO₂/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO₂/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **51.9**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

- (1) the population affected by natural disasters,
- (2) forest cover change, and
- (3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.3**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **365.4**
Level **Extremely vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **94%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	22%	78%
IEA SDS 1.65/1.8°C	47%	53%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Euro Government Green Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund has been awarded the "Greenfin" label. This label, created by the French Ministry of Ecological and Solidarity Transition, guarantees the green quality of investment funds.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Sector	AAA	AA	A	BBB	BB	B	CCC	Not Rated	Leaders (AAA,AA)	Average (A, BBB, BB)	Laggards (B, CCC)
Financials		30.7%	54.1%	15.1%					31%	69%	0%

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of December 2021

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	
0	0	197	Portfolio rated by weight 100%
			Scope 1 reported (vs estimated) 0%
			Scope2 reported (vs estimated) 0%
			Scope 1 & 2 estimations are based on MSCI methodology

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBSCD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score **52.1**
Level **Medium**

Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score **7.6**

Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Environment Vulnerability Index of sovereign issuers in portfolio

Score **365.0**
Level **Highly vulnerable**

Temperature – Alignment of the portfolio with the Paris Agreement

Lyxor has developed its own approach to assess the alignment of its sovereign bond portfolios with the climate challenges of the Paris Agreement. It aims to determine whether a country's emission reduction ambition is in line with different climate scenarios, with different temperature targets.

Our approach covers all the territorial emissions of a country, i.e. all the emissions generated in the territorial boundaries of the country. It takes into account the emissions generated by the public administration, as well as the emissions generated by companies operating in the territory of that country, and the emissions generated by households.

The emissions trajectory of a country is compared with theoretical trajectories based on 5 different climate scenarios:

- The Net Zero 2050 scenario of the International Energy Agency (IEA NZE2050),
- The Sustainable Development Scenario 1.65-1.8°C of the International Energy Agency (IEA SDS 1.65-1.8°C),
- The Stated Policies Scenario 2.7°C of the International Energy Agency (IEA STEPS 2.7°C),
- The trajectory limiting global warming to 1.5°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 1.5°C),
- The trajectory limiting global warming to 2°C of the Emissions Gap Report 2019 of the United Nations Environmental Programme (UNEP 2°C).

For more information on the methodology: <https://www.lyxor.com/en/methodology-measure-lyxors-funds-temperatures>

Percentage of assets covered by the approach **90%**

Fund's assets aligned with each climate scenario

Climate scenario	Aligned	Not aligned
IEA NZE 2050	12%	88%
IEA SDS 1.65/1.8°C	46%	54%
IEA STEPS 2.7°C	100%	0%
UNEP 1.5°C	0%	100%
UNEP 2°C	0%	100%

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives.

Lyxor Corporate Green Bond (DR) UCITS ETF -December 2021

Provision of environmental, social and governance (ESG) information – in accordance with Articles .533-22-1 and D.533-16-1 of the French monetary and financial code (Code monétaire et financier)

1. Description of ESG criteria

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

Integration of sustainability risks by Lyxor in its investment decisionmaking processes (management of collective, individual investments or investment advices) relying on practices described in the policies set forth on its website <https://www.lyxor.com/en/policies-and-regulatory-notice> (Socially Responsible Investor Policy, Climate Policy, Due Diligence Policy, Policy for Preventing and Monitoring Controversies, Voting Policy, Remuneration Policy).

The Fund has sustainable investment as its objective within the meaning Article 9 of Regulation (EU) 2019/2088 (SFDR).

The sustainable investment objective of the Fund is attained through the investment process. For further information in relation to the sustainable investment objective, please refer to the prospectus of the Fund.

The elements of Lyxor's responsible investment policy described below are applicable to this fund:

a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

The fund has been awarded the "Greenfin" label. This label, created by the French Ministry of Ecological and Solidarity Transition, guarantees the green quality of investment funds.

b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources.

The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- Lyxor uses the services of a proxy voting advisor (ISS) for corporate governance research (as part of LYXOR's voting policy).
- Lyxor uses the services of Sustainalytics to support LYXOR in its thematic engagement campaigns
- Lyxor uses ESG research from MSCI as an ESG database in order to integrate these stakes and to assess its funds.
- Lyxor uses ESG research from Trucost as an Environmental & Climate database in order to integrate these stakes and to assess its funds.
- Lyxor uses the services of Vigeo Eiris in order to develop its ESG analysis and assessment methodology applied to unlisted SMIDs assets.
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, Lyxor used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

c) Description of the methodology of the ESG analysis and the results

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

d) Description of how the results of the analysis on ESG issues are integrated in investment policies

The detailed results of our shareholder engagement are available in the Lyxor annual report on voting rights and engagement published on the Website Lyxor.com.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

2. Description of integration of climate risks and the contribution to the energy transition

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO₂e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

Portfolio ESG Rating as of December 2021

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance; Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance; Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	20%
Yellow Flag	33%
Green Flag	47%

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

Methodology change

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) *. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	8%
Thermal Coal	1%
Natural Gaz	7%
Oil	6%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on investment of: \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0001
Oil (MMBOE)	0.0000

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	3.9
Gas	22.7
Total	37.0

Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	13.2
Sum High Impact Reserves	13.2
Other	23.8

Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	14.6%	2.9%	2.3%
Some efforts	74.6%	95.5%	68.0%
Limited efforts/Information	4.0%	0.9%	19.0%
No effort/No evidence	3.4%	0.8%	10.7%

Low Carbon Transition Score

The Low Carbon Transition Score(1) uses the issuers' carbon intensity to assign to each a score of exposure to transition risks, while considering their capacity to manage those risks. This 0 to 10 grade classifies issuers in five main categories:

- Asset stranding: risk of holding assets which may become stranded
- Operational Transition: risk of increase in operational costs
- Product Transition: risk of a decrease in demand for high-carbon products and services
- Neutral: low exposure to transition risks
- Solutions: issuers well-positioned to capture opportunities associated to the growth in demand for low-carbon products.

(1) Metric developed by MSCI

Low carbon transition score	5.8
Low carbon transition management Score	5.8
Operational Transition	9.2%
Production Transition	9.2%
Neutral	61.7%
Solutions	6.0%

Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Power generation by fuel as maximum percentage of total (rebased at 100%)					
Hydro	14.4%	Liquid Fuel	1.0%	Natural Gas	48.5%
Nuclear	12.4%	Renewables	16.8%	Thermal Coal	6.8%

Share of issuers in terms of power generation in portfolio	25.5%
--	-------

Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Weight of Companies Offering Clean Technology Solutions			
Alternative Energy	33.1%	Energy Efficiency	27.3%
Pollution Prevention	0.8%	Sustainable Water	3.3%
		Green Building	15.0%
		Sustainable Agriculture	1.4%

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	31%
20-49.9%	13%
50-100%	13%

Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution			
Alternative Energy	4.1%	Energy Efficiency	4.5%
Pollution Prevention	0.0%	Sustainable Water	0.1%
		Green Building	6.8%
		Sustainable Agriculture	0.7%

Estimated EU Taxonomy Alignment

The maximum Percentage of Revenue indicates a company's estimated maximum percent of revenue from products and services addressing environmental objectives, based on the MSCI Sustainable Impact Metrics framework. Companies with Red and Orange Flag environmental controversies, and Red Flag social and governance controversies are excluded from the list as failing to meet the « Do No Significant Harm » and « Minimum Social Safeguards criteria » of the EU Taxonomy. Also excluded are tobacco producers; companies generating 5% or more of revenue from supply, distribution, or retail of tobacco products; and companies with any involvement in controversial weapons.

Physical Risk Corporate

1. Physical Risk drivers by fund - High Climate Change Scenario 2030

The Trucost Climate Change Physical Risk dataset helps investors understand their exposure to climate change physical impacts under future climate change scenarios. The Trucost dataset assesses company exposure to physical risk at the asset-level based on a database of over 500,000 assets mapped to companies in the S&P Market Intelligence database.

The physical risk scores presented represent a weighted average of the composite physical risk scores (ranging from 1-100) for each constituent, capturing risks associated with seven climate change physical risk indicators.

The figure illustrates the drivers of climate change physical risks within the portfolio under a high climate change scenario in 2030.

To allow comparison with a benchmark, we have rebased to 100

SeaLevelRise	5%
Coldwave	29%
Flood	3%
Heatwave	8%
Hurricane	3%
WaterStress	44%
Wildfire	9%

2. Percentage of Operations Risk exposure (Geographies & Business Segment)

Climate change brings two families of risks that are relevant for the financial sector: transition risks related to the impacts of policies to reduce greenhouse gas (GHG) emissions and physical risks resulting from damage directly caused by weather and climate phenomena that expose assets to the consequences of climate change (e.g. rising sea levels, drought, flooding, etc.), risks

Based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	6.4%	69.6%	24.0%	77.5%	18.4%	4.1%
Carbon Emissions	2.6%	37.2%	60.2%	69.4%	28.5%	2.1%
Electronic Waste	1.7%	8.8%	89.5%	97.3%	0.3%	2.4%
Opportunities in Green Building	4.3%	38.0%	57.7%	88.7%	2.7%	8.6%
Opp's in Renewable Energy	4.1%	76.5%	19.4%	79.3%	9.7%	11.0%
Packaging Material & Waste	12.2%	31.7%	56.1%	98.1%		1.9%
Water Stress	22.3%	67.1%	10.6%	69.2%	19.4%	11.3%
Toxic Emissions & Waste				68.2%	20.6%	11.2%

Temperature – Alignment of the portfolio with the Paris Agreement

The coverage of the alignment measurement under different climate scenarios is insufficient for the fund.
