Risk and Reward Profile

The Risk and Reward profile of the Fund is based on the variations in value that an investment in this Fund has experienced. The classification of the Fund is a reasonably accurate reflection of the risk of the Fund over past market conditions. Historical data used in determining the profile is not a reliable indication for the risk inherent in any future circumstances and events that differ from what the Fund has undergone in the past.

The Risk and Reward profile of a Fund is an indicator but not a target or a guarantee and may shift over time.

The lowest risk category does not mean that the Fund is free of risk. Higher possible returns generally also imply higher possible risks.

Why is the Fund in this specific category?

Investments in equity include significant fluctuations in prices, due for instance to negative information about the issuer or market. Moreover, these fluctuations are often amplified in the short term.

The risk level of the Fund mainly reflects the market risks arising from investment in European Equities.

Other risks materially relevant to the Fund which are not adequately captured by the indicator are described below:

Operational and Custody Risk: Some markets are less regulated than most of the international markets; hence, the services related to custody and liquidation for the Fund on such markets could be more risky.

Small Cap, Specialised or Restricted Sectors Risk: Investing in small caps or specialised or restricted sectors is likely to be subject to a higher than average volatility. Smaller companies may find themselves unable to generate new funds to support their growth and development, they may lack vision in management, or they may develop products for new, uncertain markets.

Credit Risk: This risk relates to the ability of an issuer to honour its commitments; downgrades of an issue or issuer rating may lead to a drop in the value of bonds in which the Fund has invested.

Derivatives Risk: When investing in over the counter or listed derivatives, the Fund aims to hedge and/or to leverage the yield of its position. The attention of the investor is drawn to the fact that leverage increases the volatility of the Fund.
