FUND OVERVIEW

The Fund aims to achieve a positive absolute return through a combination of capital growth and income on your investment regardless of market conditions. The Fund will provide exposure to several investment styles including, (i) Value: focuses on investments that appear relatively cheap with the aim of outperformance relative to expensive assets; (ii) Momentum: focuses on investments with relatively strong medium term performance with the aim of benefitting from an asset's recent relative performance continuing in the short term; (iii) Carry: focuses on higher-yielding investments with the aim of benefitting from the higher returns of these assets relative to lower-yielding assets; and (iv) Defensive: focuses on investments with low-risk characteristics with the aim of benefitting from the tendency for lower risk, higher quality assets to generate higher risk-adjusted returns than higher risk, lower quality assets. The Fund will invest on a global basis in any or all of the following asset classes: equity securities (e.g. shares), other equity-related securities, fixed income (FI) securities (e.g. bonds), other fixed-income related securities, permitted money market instruments (MMIs) (e.g. debt instruments with short-term maturities), permitted deposits, cash and other funds. The Investment Adviser (IA) will select investments which are liquid (i.e. can easily be bought and sold in the market) and will take into account environmental, social and governance ("ESG") characteristics. The IA intends to exclude issuers which (a) have exposure to sectors which include controversial weapons (nuclear, cluster munitions, biological-chemical, landmine, depleted uranium, or incendiary weapons), thermal coal extraction and generation, and tobacco and (b) are deemed to have breached one or more of the ten UN Global Compact Principles (a UN initiative to implement universal sustainability principles). To undertake this analysis and exclusion, the IA may use data provided by external ESG research providers and proprietary models. After screening, the IA may also remove the lowest scoring issuers from the resulting universe of securities.

RATINGS

Key Risks Continued: Emerging markets are generally more sensitive to economic and political conditions than developed markets. Equities and equity-related securities can be affected by daily stock market movements. Fixed Income securities can be affected by changes to interest rates, credit risk and potential or actual credit rating downgrades. Noninvestment grade FI securities can be more sensitive to these events. FDIs are highly sensitive to changes in the value of the asset they are based on. The impact is greater where FDIs are used in an extensive or complex way.

The Morningstar Analyst Rating is not a credit or risk rating. It is a subjective evaluation performed by the manager research analysts of Morningstar. Morningstar evaluates funds based on five key pillars, which are process, performance, people, parent, and price. Analysts use this five pillar evaluation to determine how they believe funds are likely to perform over the long term on a risk-adjusted basis. They consider quantitative and qualitative factors in their research, and the weighting of each pillar may vary. The Analyst Rating scale is Gold, Silver, Bronze, Neutral, Negative. A Morningstar Analyst Rating of Gold, Silver, or Bronze reflect an Analyst's conviction in a fund's prospects for outperformance. Analyst Ratings are continuously monitored and reevaluated at least every 14 months. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>. The Morningstar Analyst Rating should not be used as the sole basis in evaluating a mutual fund. Morningstar Analyst Ratings are based on Morningstar's current expectations about future events; therefore, in no way does Morningstar represent ratings as a guarantee nor should they be viewed by an investor as such. Morningstar Analyst Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or to differ significantly from what we expected Morningstar rates mutual funds from one to five stars based on how well they've performed (after adjusting for risk and accounting for all sales charges) in comparison to similar funds. Within each Morningstar Category, the top 10% of funds receive five stars, the next 22.5% four stars, the middle 35% three stars, the next 22.5% two stars, and the bottom 10% receive one star. Funds are rated for up to three time periods—three-, five-, and 10 years—and these ratings are combined to produce an overall rating. Funds with less than three years of history are not rated. Ratings are objective, based entirely on a mathematical evaluation of past performance. They're a useful tool for identifying funds worthy of further research, but shouldn't be considered buy or sell recommendations. Morningstar Rating metrics. Morningstar, Inc.© 2022.
