

Legg Mason Western Asset Diversified Global Credit Fixed Maturity Bond Fund 2022 Class A Acc. (H) (EUR)

Fund details

Summary of Investment Objective:

The fund's goal is to generate income.

The fund will invest in government and corporate bonds issued by developed and emerging market countries.

The value of investments and the income from them may go down as well as up and you may not get back the amount you originally invested.

Fund Inception Date: 03/10/2018

Performance inception date: 10/12/2018

No Benchmark

ISIN IE00BFYT9C29

SEDOL BFYT9C2

Risk and reward profile*

Portfolio statistics

Total Net Assets (in millions)	\$164,25
Month end Net Asset Value (NAV)	EUR95,34
Number of holdings	29
Percentage of top ten holdings	63,62

Risk statistics (weighted average)*

Life	81 days
Effective Duration	54 days
Credit Quality	AA-
Current Yield	3,13
Yield to Worst	5,62

Charges

Minimum initial investment	1,000 EUR
Entry charge	5.00%
Exit charge	None
Ongoing charge	0.92%
Performance fee	None

The charges are the fees the fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations.

This is a marketing communication. Please refer to the prospectus of the UCITS and to the KIID before making any final investment decisions. **Past performance does not predict future returns.**

Cumulative performance (%)

	Year to Date	1-Mon	3-Mon	1-Yr	3-Yr	5-Yr	Since inception
Class A Acc. (H)	-7.14	-0.54	-1.47	-8.72	-7.23	-	-4.66

Calendar year performance (%)

	2021	2020	2019	2018	2017
Class A Acc. (H)	-1.36	-0.19	4.51	-	-

Rolling 12 months performance (%)

Source for performance figures - Franklin Templeton. Performance is calculated on a NAV to NAV, with gross income reinvested without initial charges but reflecting annual management fees. Sales charges, taxes and other locally applied costs have not been deducted. The fund's returns may increase or decrease as a result of changes to foreign exchange rates.

From 28 August 2020, the pricing of securities held in Legg Mason Global Solution Funds Plc will use the mean (or mid) value of the bid and ask prices, to calculate the Funds' Net Asset Values ("NAV"). The Funds previously used a bid price methodology for fixed income securities, and last traded price for equity securities.

Investment risks

The fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

Liquidity: In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

Low rated bonds: The fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Fund currency: Changes in exchange rates between the currencies of investments held by the fund and the fund's base currency may negatively affect the value of an investment and any income received from it.

Interest rates: Changes in interest rates may negatively affect the value of the fund. Typically as interest rates rise, bond values fall.

Derivatives: The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested.

Fund counterparties: The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Hedged class currency: The value of your investment may fall due to changes in the exchange rate between the currency of your share class and the base currency of the fund. Efforts will be made to try to protect the value of your investment against such changes, but such efforts may not succeed.

Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

A temporary negative cash position may be due to (1) unsettled trade activity (2) permitted purposes, such as borrowing or derivatives use, if allowed by the prospectus.

Currency exposure (% of portfolio by market value)
Definitions

Risk and reward profile: There is no guarantee that the fund will remain in the indicator category shown above and the categorisation of the fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this fund. The lowest category does not mean a risk-free investment. The fund does not offer any capital guarantee or protection.

Life: The average number of years for which each component of unpaid principal on a bond, loan or mortgage remains outstanding. The weighted average life calculation provides an aggregate figure that shows how many years it will take to pay off half the outstanding principal on a bond portfolio.

Effective duration: Average Duration equals the weighted average maturity of all the cash flows in the portfolio and gives an indication of the sensitivity of a portfolio's bond prices to a change in interest rates. The higher the duration, the more sensitive the portfolio is to interest rate changes. Effective Duration is a calculation for bonds with embedded options (Not every portfolio will purchase bonds with embedded options). It takes into account the expected change in cash flows caused by the option, as interest rates change. If a portfolio does not hold bonds with embedded options, then the Effective Duration will be equal to the Average Duration.

Credit quality breakdown: Nationally Recognised Statistical Rating Organisations (NRSROs) assess the likelihood of bond issuers defaulting on a bond's coupon and principal payments. The weighted average credit quality by Western Asset Management assigns each security the higher rating from three NRSROs (Standard & Poor's, Moody's Investor Services and Fitch Ratings, Ltd.). If only one NRSRO assigns a rating, that rating will be used. Securities that are not rated by all three NRSROs are reflected as such. The lower the overall credit rating, the riskier the portfolio. The credit rating is expressed as a regular letter rating (from high to low quality): AAA, AA, A, BBB, BB, ...D.

Important information

OUTSIDE OF THE UNITED KINGDOM, IRELAND, SWITZERLAND, LUXEMBOURG AND THE NETHERLANDS, THIS FACTSHEET IS FOR USE BY PROFESSIONAL OR QUALIFIED INVESTORS ONLY.
