

ELEVA Absolute Return Europe - Class I

30/11/2023
Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis
- Differentiated and disciplined bottom up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -10 and +50% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

Monthly Comment

Interest rate relief led to a sharp rally in markets in November, with equities and bonds performing very strongly. Inflation data surprised on the downside, and economic surprises ticked positively, increasing the probability of a soft landing for investors.

ELEVA Absolute Return was up 2.32% in November.

The long leg had a positive contribution and behaved better than the main European indices. Cyclical and bond sensitive sectors were favoured by investors. Financials, healthcare, and technology had a positive impact on the fund, while energy choices were a drag to performance.

Infineon Technologies was a strong performer as their 2024 guidance reassured, with still very positive growth in autos and datacenters making up for a de-stocking in other divisions. Other cyclical (**Siemens**, **Stellantis**) also did well with investors reassessing upwards their growth expectations. **Ryanair** had a very well received update, highlighting strong demand and limited supply in their main flight routes. **3i** once again surprised investors with the growth coming from their low-cost retailer Action group. Conversely, defensives lagged the index this month. **Pernod Ricard** suffered from a negative read-across after a Diageo profit warning. Oil sensitives (**TotalEnergies**, **Centrica**), were also under pressure after a fall in Brent.

The short book had a negative impact on performance, with intense short covering activity affecting the performance of the short leg, both on single names and on index hedges. Financials, industrials, and technology shorts suffered from this positive economic and interest rate outlook re-assessment.

Economic growth is uneven, with weak growth in Europe and in China balanced by resilience in the US and good growth elsewhere. Falling inflation expectations reduce the risks of a Central Bank mistake. European macro surprises are now improving from a low level in our view. In that environment we believe that corporates will still be able to grow at a moderate pace. Value and cyclical on the long leg were at 49.8% and 63.1% of the fund respectively. The cyclical exposure was increased materially this month. Net exposure is up to 34.1%, gross exposure at 134.6%.

Since inception, ELEVA Absolute Return Europe is up 29.34%.
