

Man GLG Strategic Bond

MONTHLY SUMMARY REPORT: 30 JUNE 2023

REPORTING CLASS: Man GLG Strategic Bond I GBP

FUND DESCRIPTION

The Fund seeks to provide a total return for investors, with a monthly income and the potential for capital growth. The Investment Manager will select investments with a top-down assessment of the macroeconomic environment, including the likely path of growth, inflation and interest rates, in various countries. The Fund primarily invests in investment grade government and corporate bonds globally (determined by the Investment Adviser using the highest rating ascribed by relevant credit rating agencies, or, where no such ratings are available, using its own internal rating), cash and cash equivalents including deposits, treasury bills, certificates of deposit, bankers acceptances and commercial paper. The Fund may actively use financial derivative instruments to achieve the investment objective. It may also invest in a number of other assets including currencies, money market instruments, floating rate notes, preference shares, bond securities, other funds, cash and other liquid assets. The fund is actively managed.

A complete description of fund aims is set out in the fund's prospectus.

FUND RISKS

The value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested. Prior to investing in the Fund investors should carefully consider the risks associated with investing, whether the Fund suits their investment requirements and whether they have sufficient resources to bear any losses which may result from an investment in the Fund. Investors should only invest if they understand the terms on which the Fund is offered. Investors should consider the following risks and where appropriate seek professional advice before investing: **Investment Objective Risk, Market Risk, Counterparty Risk, Currency Risk, Liquidity Risk, Financial Derivatives Instruments, Leverage Risk, Total Return, Emerging Markets, Non-Investment Grade Securities.** More details can be found in the risk glossary. **Prior to making investments investors should read and consider the fund's offering documents.**

SYNTHETIC RISK & REWARD INDICATOR (SRRI)

² Sharpe ratio is an absolute measure of risk-adjusted return, negative Sharpe ratios are not shown as they can be misleading.

Past Performance is not indicative of future performance. Returns may increase or decrease as a result of currency fluctuations. Performance data is shown net of the reporting class Ongoing Charge Figure (or TER), performance fees and transaction costs and gross of taxes with gross dividend income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Other share classes may charge different fees. **This is a marketing communication.**

COMMENTARY

The Man GLG Strategic Bond ('Fund') returned 0.93% in June and -0.24% year to date against the IA £ Strategic Sector which returned -0.32% in June and 0.68% year to date.

Despite the Fed pausing their rate hiking cycle for the first time since March 2022, other central banks continued to raise rates, including a resumption after a pause from Australia and Canada. In the UK, there was a 0.5% rate hike after another inflation surprise and gilt yields again led global bond yields towards the top of recent ranges. Risk appetite elsewhere remained fairly healthy however.

Spreads narrowed in June which combined with higher government bond yields meant the global investment grade index returned only 0.07% on the month. The global high yield index, with far greater spread sensitivity returned 2.02%. The Fund's investment grade and high yield credit components returned 0.15% and 0.07% respectively, reflecting good credit spread performance, but a higher-than-average exposure to longer duration credits.

EDF was the Fund's best performing credit, adding 0.17% towards return in June. EDF issued a new hybrid during the month, which drew strong demand, but also reaffirmed (once again) management's stance of keeping hybrid debt as a meaningful part of the capital structure.

Performance from Tactical positioning was strong in June, adding 0.71% to performance. Core government bond positioning was particularly successful in the month, contributing 0.98%, while FX was a moderate drag, detracting -0.27%.

The Fund reduced its duration on the first day of June, following a strong rally into the end of May. This short-term cautious view on duration was maintained heading into the Fed meeting, which was anticipated to be a volatile event. Post central bank meetings, futures were initially removed enabling the Fund to implement its more medium-term constructive view on government bonds. A more active approach reflected the range-trading dynamics seen in the latter half June.

Managing interest rate risks into key events, whilst employing the Fund's more short-term technical duration overlay were both successful in driving positive P&L in what was a month of lacklustre returns for less actively managed bond funds.

Currency performance disappointed in June, given a neutral to slightly negative US dollar position on average that should have provided a tailwind. Specifically, a short Australian dollar position at the start of the month contributed negatively as markets moved firmly risk-on. This also impacted shorts in Euro, and Norwegian krone to a lesser extent. Long positioning in the Canadian dollar was beneficial, while longs in Sterling and Swiss franc were muted performance-wise and not enough to meaningfully offset negative performance elsewhere.

Market Outlook

Financial markets have remained somewhat risk-seeking again in the past month, assisted in part by the well flagged pause in the rate hiking cycle from the Federal Reserve. We still anticipate this may be the calm before the storm, however, with there likely to be a detrimental ongoing impact on global growth through tightening financial conditions in the coming months. In our view, major central banks will gradually become more cautious in raising rates through the summer, as sharply lower growth and potential disinflation risks become a more prominent concern. We can look forward as bond investors to a more positive environment for high quality, longer duration assets such as government bonds and non-cyclical investment grade debt. This is particularly the case now that rate expectations and yields generally trade at cycle highs.

The Fed delivered on the increasingly consensus view of a "hawkish skip" at the June meeting; keeping rates on hold while emphasizing July remained a "live meeting". The ECB's rate announcement also followed investors' expectations, hiking 25 basis points, while the Bank of England surprised somewhat to the upside hiking another 50 basis points to 5%. We continue to believe the vast majority of rate rises are behind us, while the impact of these hikes into the real economy, is yet to be fully felt due to the transmission delay. As such, we caution against significant further hikes implied by the market, particularly the UK which has priced in a terminal rate as high as 6.5%.

Positioning

The Fund's credit holdings remain positioned for downside surprises in global growth and inflation. Incremental additional rate hikes, following an already aggressive tightening campaign by the world's major banks, should eventually see recessions develop. Such credit market dispersions as this will inevitably cause have historically allowed us to pick excellent credits at attractive valuations, drive stronger long-term returns.

We believe decompression will be a meaningful theme going forward and we have continued to move the portfolio into non-cyclical names and away from the more cyclical names that have recently performed strongly.

While our outlook is generally negative, there remain attractive opportunities in the credit market, including shorter dated senior financial instruments. High short-dated government bond yields, combined with senior financial front-end spreads that are still wider than before the volatility in the financial sector in March, provide all-in yields higher than 6.5% while taking very limited duration risk.

The portfolio had a duration of 5.4 years at June month-end, of which government bond exposure contributes 0.8 years (5.2 years offset by -4.4 year future hedge).

We maintain strong conviction in holding government bonds at the upper end of current yield ranges. The Fund's largest cash positions remain in a combination of US treasuries, 10-year and 30-year bonds, as well as Australia, 30-year UK, and 30-year Germany. Generally, we aim to maintain a larger positive duration exposure in government bonds at the top of recent yield ranges with the expectation of a significant drop in yields in the coming months.

In FX, USD directional positioning has grown since June month-end. We see several currencies with the potential to gain on relative rate expectations, while the US dollar may underperform after a pause in the US rate hiking cycle.

The portfolio's yield to maturity was 4.9%, 1% lower due to futures hedges, at the end of June, with the Fund's corporate exposure yielding 7.2%. This can act as a key foundation for potential expected Fund returns.

Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges.

*Entry Charge is up to the rate indicated.

§ Please note that the Fund will, from time to time, assume exposure to equity indices for efficient portfolio management purposes.

†Please refer to the Fund's prospectus for further details.

^The organisations and/or financial instruments mentioned are for reference purposes only. The content of this material should not be construed as a recommendation for their purchase or sale.

GLOSSARY

Annualised Return	An annualised total return is an average amount of money earned by an investment each year over a given time period. It is calculated to show what an investor would earn over a period of time if the annual return was compounded.
Annualised Volatility	Volatility is the rate and extent at which the price of a portfolio, security or index, moves up and down. If the price swings up and down with large movements, it has high volatility. If the price moves more slowly and to a lesser extent, it has lower volatility. It is used as a measure of the riskiness of an investment. Annualised volatility is an average annual amount of volatility over a given time period.
Beta	A measure of how sensitive an investment portfolio is to market movements. The sign of the beta (+/-) indicates whether, on average, the portfolio's returns move in line with (+), or in the opposite direction (-), to the market. The market has a beta of 1. If the portfolio has a beta of less (more) than 1, it means that the security is theoretically less (more) volatile than the market.
Comparator Benchmark	An index or similar factor against which a fund manager invites investors to compare a fund's performance.
Correlation	A measure of the interdependence or strength of the relationship between two investments. A correlation of 1 means that the two investments are perfectly synchronised, -1 implies that they move in symmetrically opposite directions and 0 means no relationship between them.
Credit Rating (quality)	A score awarded by S&P, Moody's or Fitch to indicate the financial strength of the issuer of a bond, and the potential for a default on interest and principal payments. For example, according to the S&P rating scheme the top credit rating is 'AAA'. The lowest rating to be considered 'investment grade' is 'BBB-'. Below 'BBB-', bonds are termed 'sub investment grade' or 'high yield'. If more than one rating agency awards a score, the best rating will be chosen. If no official score is awarded by S&P, Moody's or Fitch a rating for the issuer will be used if available.
Distribution Yield	The distribution yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of the fund's net asset value per share as at the date shown, and may be estimated. It does not include any initial charge and investors may be subject to tax on distributions.
Duration	Expressed in years and measures the sensitivity of a bond's price to a change in interest rates. There is an inverse relationship between bond prices and interest rates.
Entry Charge	The entry charge shown is a maximum figure and in some cases you might pay less. Please refer to your financial advisor or the distributor for the actual charges.
Exposure	This refers to the part of a portfolio that is subject to the price movements of a specific security, sector, market or economic variable. It is typically expressed as a percentage of the total portfolio, e.g. the portfolio has 10% exposure to the mining sector.
FX Forward	An FX forward contract is an agreement to purchase or sell a set amount of a foreign currency at a specified price for settlement at a predetermined time in the future.
Information Ratio	A ratio of portfolio returns above the excess returns of a benchmark (usually an index) to the volatility of those returns. The ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark. Volatility is measured using tracking error.
Long Position	A security that is bought in expectation that it will rise in value.
Maturity	Maturity is the length of time before a financial instrument ends, after which it must either be renewed or it will cease to exist.
NAV	The Net Asset Value (NAV) represents the value per share. It is calculated by dividing the total net asset value of the fund (the value of the fund's assets less its liabilities) by the number of shares outstanding.
Net and Gross Exposure	The amount of a portfolio's exposure to the market. Net exposure is calculated by subtracting the amount of the portfolio with short market exposure from the amount of the portfolio that is long. For example, if a portfolio is 100% long and 20% short, its net exposure is 80%. Gross exposure is calculated by combining the absolute value of both long and short positions. For example, if a portfolio is 100% long and 20% short, its gross exposure is 120%.
Ongoing Charge Figure (OCF)	The OCF is estimated and based on expenses and may vary from year to year. It includes management fees but excludes performance fees (where applicable) and portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units in another sub-fund. The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.
Overweight/Underweight	Refers to a fund's position in line with its chosen reference index. Overweight means a fund holds more of a certain security than the reference index and underweight means a fund holds less of a certain security compared to its reference index.
Performance Fee	The payment made to an Investment Manager if certain performance levels are achieved (often over and above any levels set out in the investment objective) within a set time period. Please refer to the fund's prospectus for a complete description.
Redemption Fee	This is the maximum amount by which your investment may be reduced prior to the proceeds being paid out.
Running Yield	At security level, running yield is the annual income on an investment divided by its current market value. At fund level, it is a weighted average of the contributing securities, based on absolute weights.
Sector (i)	A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.
Sector (ii)	A peer group of funds which have a similar investment objective or invest in the same type of assets. These are organised by independent companies such as the Investment Management Association in the UK. The average performance of a sector is often used to compare with the performance of an individual fund in the sector.
Sharpe Ratio	The Sharpe Ratio is a measure for calculating risk-adjusted return, and has become the industry standard for such calculations. The Sharpe Ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. The higher the ratio the better, with a number greater than 1 usually considered good, a number greater than 2 considered very good and a ratio of 3 or higher considered excellent. As it is an absolute measure of risk-adjusted return, negative Sharpe Ratios can be misleading and are therefore shown as N/A.
Short Position	Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as contracts for difference (CFDs) – can be used to simulate a short position.
Synthetic Risk & Reward Indicator (SRRI)	Featured on the Key Investor Information Document (KIID), the SRRI is a measure of the overall risk and reward profile of a fund. Funds are categorised on a scale from 1 to 7 where 1 is the lowest risk and 7 is the highest. Typically, the SRRI is derived from the volatility of past returns over a 5-year period. Investors should be aware the indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The lowest category does not mean risk free.
Tracking Error	Tracking error is a measure of the divergence between a portfolio's returns and the benchmark or index against which it is managed.
Yield	Yield to maturity (YTM) is the total return anticipated on a bond if the bond is held until the end of its lifetime. Yield to maturity is considered a long-term bond yield expressed as an annual rate, coupons are assumed to be reinvested at the same rate. This takes into account the change in yield should the issuer have the desire and the ability to retire the debt prior to maturity.
YTD	Year-to-date.

RISK GLOSSARY

Investment Objective Risk - There is no guarantee that the Fund will achieve its investment objective.

Market Risk - The Fund is subject to normal market fluctuations and the risks associated with investing in international securities markets. Therefore, the value of your investment and the income from it may rise as well as fall and you may not get back the amount originally invested.

Counterparty Risk - The Fund will be exposed to credit risk on counterparties with which it trades in relation to on-exchange traded instruments such as futures and options and where applicable, 'over-the-counter' ("OTC", "non-exchange") transactions. OTC instruments may also be less liquid and are not afforded the same protections that may apply to participants trading instruments on an organised exchange.

Currency Risk - The value of investments designated in another currency may rise and fall due to exchange rate fluctuations. Adverse movements in currency exchange rates may result in a decrease in return and a loss of capital. It may not be possible or practicable to successfully hedge against the currency risk exposure in all circumstances.

Liquidity Risk - The Fund may make investments or hold trading positions in markets that are volatile and which may become illiquid. Timely and cost efficient sale of trading positions can be impaired by decreased trading volume and/or increased price volatility.

Financial Derivatives Instruments - The Fund will invest financial derivative instruments ("FDI") (instruments whose prices are dependent on one or more underlying asset) to achieve its investment objective. The use of FDI involves additional risks such as high sensitivity to price movements of the asset on which it is based. The extensive use of FDI may significantly multiply the gains or losses.

Leverage Risk - The Fund's use of FDI may result in increased leverage which may lead to significant losses.

Total Return - Whilst the Fund aims to provide capital growth, a positive return is not guaranteed over any time period and capital is in fact at risk.

Emerging Markets - The Fund may invest a significant proportion of its assets in securities with exposure to emerging markets which involve additional risks relating to matters such as the illiquidity of securities and the potentially volatile nature of markets not typically associated with investing in other more established economies or markets.

Non-Investment Grade Securities - The Fund may invest a significant proportion of its assets in non-investment grade securities (such as "high yield" securities) are considered higher risk investments that may cause income and principal losses for the Fund. They are instruments which credit agencies have given a rating which indicates a higher risk of default. The market values for high yield bonds and other instruments tend to be volatile and they are less liquid than investment grade securities.

A complete description of risks is set out in the Fund's prospectus.

Important information

This material is of a promotional nature.

The Fund is a sub-fund of Man Funds plc, domiciled in Ireland and registered with the Central Bank of Ireland. Full details of the Fund's objectives, investment policy and risks are located in the Prospectus which with the Key Investor Information Document (KIID), and the Report and Accounts of the UCITS, are accessible free of charge from the local information/paying agent, from authorised distributors and from www.man.com/documents. The KIID is available in English and in an official language of the jurisdictions in which the Fund is registered for public sale. The Prospectus and the Reports and Accounts of the UCITS can be obtained in English. In Switzerland, the Prospectus is also available in German.

In Spain: Full prospectuses, KIIDs, statutes and annual and semi-annual accounts of the investment products are available free of charge at the offices of the Spanish distributors authorised in Spain. A list of the Spanish distributors authorised and their contact details can be obtained on the Comisión Nacional del Mercado de Valores ("CNMV") website: www.cnmv.es. Man Funds plc: The sub-funds mentioned herein are authorised to be marketed to the public in Spain and belong to the Man Funds plc that is registered with the CNMV with registration number 296.

In order to fulfil the fund's objectives the Prospectus allows the manager the ability to invest principally in units of other collective investment schemes, bank deposits, derivatives contracts designed with the aim of gaining short term exposure to an underlying stock or index at a lower cost than owning the asset, or assets aiming to replicate a stock or debt securities index.

More than 35% of the Fund's total holdings in bonds may be issued by or guaranteed by:

World Bank

The value of an investment and any income derived from it can go down as well as up and investors may not get back their original amount invested. Alternative investments can involve significant additional risks.

This material is for information purposes only and does not constitute an offer or invitation to invest in any product for which any Man Group plc affiliate provides investment advisory or any other services. It is not contractually binding nor does it represent any information required by any legislative provision. Prior to making any investment decisions, investors should read and consider the fund's offering documents.

Opinions expressed are those of the author as of the date of their publication, and are subject to change.

Some statements contained in these materials concerning goals, strategies, outlook or other non-historical matters may be "forward-looking statements" and are based on current indicators and expectations at the date of their publication. We undertake no obligation to update or revise them. Forward-looking statements are subject to risks and uncertainties that may cause actual results to differ materially from those implied in the statements.

Distribution of this material and the offer of shares may be restricted and the minimum subscription amount may be higher in certain jurisdictions. The product(s) mentioned within this material (i) may not be registered for distribution in your jurisdiction, and (ii) may only be available to professional or otherwise qualified investors or entities. It is important that distributors and/or potential investors are able to ensure compliance with local regulations prior to making a subscription. Please refer to the offering documentation for additional information.

Unless stated otherwise the source of all information is Man Group plc and its affiliates as of the date on the first page of this material.

Unless stated otherwise the source of all market data is Man Group Database and Bloomberg.

This material was prepared by GLG Partners LP ("Investment Manager") (company number LP006776) which is registered in England and Wales at Riverbank House, 2 Swan Lane, London, EC4R 3AD. Authorised and regulated in the UK by the Financial Conduct Authority. This material is distributed pursuant to global distribution and advisory agreements by subsidiaries and consultants of Man Group plc ("Marketing Entities"). Specifically, in the following jurisdictions:

Australia: To the extent this material is distributed in Australia it is communicated by Man Investments Australia Limited ABN 47 002 747 480 AFSL 240581, which is regulated by the Australian Securities & Investments Commission (ASIC). This information has been prepared without taking into account anyone's objectives, financial situation or needs.

European Economic Area: Unless indicated otherwise this material is communicated in the European Economic Area by Man Asset Management (Ireland) Limited ("MAMIL") which is registered in Ireland under company number 250493 and has its registered office at 70 Sir John Rogerson's Quay, Grand Canal Dock, Dublin 2, Ireland. MAMIL is authorised and regulated by the Central Bank of Ireland under number C22513.

Germany/Liechtenstein: To the extent this material is used in Germany/Liechtenstein, the communicating entity is Man (Europe) AG, which is authorised and regulated by the Liechtenstein Financial Market Authority (FMA). Man (Europe) AG is registered in the Principality of Liechtenstein no. FL-0002.420.371-2. Man (Europe) AG is an associated participant in the investor compensation scheme, which is operated by the Deposit Guarantee and Investor Compensation Foundation PCC (FL-0002.039.614-1) and corresponds with EU law. Further information is available on the Foundation's website under www.eas-liechtenstein.li.
