UBS (Lux) Equity Fund – China Opportunity (USD) (EUR) I-A1-acc

Portrait

- Very actively managed equity fund based on a concentrated equity portfolio investing in selected Chinese companies.
- The manager is given great flexibility to take focused views on the most attractive stocks and exploit the best opportunities, unconstrained by the reference index.
- Diversified across sectors offering broad coverage of the Chinese market.
- The exchange rate risk between USD and EUR is not hedged. The portfolio manager is not tied to the benchmark in terms of investment selection or weight.
- All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. Please consult your client advisor for more information on the investment risks of this product.

UBS China Opportunity Equity Fund USD

ESG Report

ESG is an abbreviation for Environmental, Social and Governance (factors). These factors are used to evaluate companies and countries on how advanced they are with respect to sustainability. Once sufficient data on these factors are available, they can be used to assess and compare assets and also to inform the investment process when deciding what assets to buy, hold or sell.

ESG Performance

The following illustrations show the fund's performance against sustainability criteria that are either explicitly part of the fund's ESG objectives or are included in the investment process.

Glossary

UBS AM sustainability approaches applied

Exclusion: Strategies that exclude securities from portfolios where they are not aligned to an investor`s values. Includes customized screening criteria.
ESG Integration: Strategies that integrate environmental, social and governance (ESG) factors into fundamental financial analysis to improve risk/return profile.
SI Focus: Strategies where sustainability is an explicit part of the investment guidelines, universe, selection and/or investment process
Impact: Strategies where the intention is to generate measurable environmental and/or social benefits ("impact") along-side the financial return.
Voting: The Voting flag is a principle-based product level classification (top down) and is based on the overall applicability of the UBS AM Policies. UBS will actively exercise voting rights based on the principles outlined in the UBS Asset Management Proxy Voting policy and UBS Asset Management Stewardship policy, with two fundamental objectives: 1. To act in the best financial interests of our clients to enhance the long-term value of their investments. 2. To promote best practice in the boardroom and encourage strong sustainability practices. This is not an indication that voting on sustainability related topics has taken place with respect to companies held by a sub-fund during any given time period. For information about voting activities with specific companies (bottom-up transparency) please refer to the UBS Asset Management Stewardship Annual Report. Information shown in this report might also deviate from other reports which might only focus on, for example, climate related activities.
https://www.ubs.com/global/en/assetmanagement/capabilities/sustainable-investing/stewardship-engagement.html
Engagement Program: The engagement program applies to UBS funds and aims to prioritize/select companies where UBS Asset Management has identified concerns or thematic topics on particular ESG factors. These companies are selected from across the universe of companies in which UBS Asset Management invests using a top-down approach in accordance with our principles, as outlined in the Global Stewardship Policy. The prioritization process will determine if

and when engagement with a company is required. If a company is selected for the engagement program, the engagement dialog will be conducted for a minimum period of two years.
This is not an indication that sustainability related engagement has taken place with respect to companies in this portfolio during any given time period or that the companies in this portfolio were chosen with the goal to actively engage (bottom-up transparency). Information on UBS Asset Management's selection of companies, engagement activities, prioritization process and understanding of concerns can be found in the UBS Asset Management Stewardship Annual Report and Stewardship Policy. Information shown in this report might also deviate from other reports which might only focus on, for example, climate related activities.
https://www.ubs.com/global/en/assetmanagement/capabilities/sustainable-investing/stewardship-engagement.html

Controversy check: Controversial Business Involvement exposure is the exposure to companies with a revenue share exceeding a certain threshold of the respective field (production). Link to our exclusion policy for more details:
-> www.ubs.com/si-exclusion-policy

MSCI ESG Fund Ratings are designed to measure the environmental, social and governance (ESG) characteristics of a fund's underlying holdings, making it possible to rank or screen mutual funds and ETFs on a AAA to CCC ratings scale.

MSCI ESG scores are provided by MSCI ESG Research and are measured on a scale from 0 (lowest/worst score) to 10 (highest/best score). The score is based on the underlying company's exposure to industry specific ESG risks and their ability to mitigate those risks relative to their peers. ESG scores are also shown a breakdown of the E, S and G scores, in reference to the different components that are considered for the Environmental, Social and Government pillars. The components are also rated on a scale of 0-10. Based on the individual E, S and G values, a weighted average can be calculated. This is dynamic and takes into account the direct changes of all underlying results, which affect the individual E, S and G values. The ESG Score measures the most financially significant environmental, social and governance risks and opportunities of companies. In addition, sectoral differences are taken into account through key industry specific ESG issues. This makes the ESG score a rather static measure, as the relative valuation of a sector remains constant over a longer period of time.
The metric is scaled up to 100% if actual data coverage is above the defined thresholds - Fixed Income: 50%; Equities: 67%, Multi-Asset: 50%. Otherwise, the metric is reported as "-".

Weighted Average Carbon Intensity – Corporate issuers/ Carbon Intensity- Sovereign issuers: These metrics measure a fund's exposure to carbon-intensive companies and governments. These metrics provide insight into potential risks related to the transition to a lower-carbon economy because companies with higher carbon intensity are likely to face more exposure to carbon related market and regulatory risks. These metrics are applicable across asset classes.
It's the sum product of the fund weights and individual carbon intensities (carbon emissions scope 1+2/USDm sales or GDP).
The metric is scaled up to 100% if actual data coverage is above the defined thresholds – Fixed Income: 50%; Equities: 66%, Multi-Asset: 50%. Otherwise, the metric is reported as -.
Classification system to separate corporate and sovereign issuers: Bloomberg Barclays Methodology. Securitized bonds excluded from the calculation. "No exposure" in case the fund is not invested in the respective issuers for the month.
Data provider: MSCI ESG Research

Carbon Footprint (tons CO_2e/USDm invested): Expresses the greenhouse gas footprint of an investment sum. The carbon emissions scope 1 and 2 are allocated to investors based on an enterprise value (including cash) ownership approach and are normalized by the current fund value. The carbon footprint is a normalized measure of a fund's contribution to climate change that enables comparison with a benchmark, between funds and between individual investments. The metric is total carbon emissions expressed as per currency invested.
The metric is scaled up to 100%, if actual data coverage is above the defined thresholds – fixed income: 50%, equities: 67%, multi-asset: 50%. Otherwise, the metric is reported as "-".
Classification system to separate corporate and sovereign issuers: Bloomberg Barclays Methodology. Securitized bonds are excluded from the calculation. "No exposure" if the fund is not invested in the respective issuers for the month.

Fund of fund investments, derivatives and cash
Derivatives and fund of fund investments used in the portfolio are treated on a lookthrough basis, whereby the economic exposures to the underlying basket of securities is treated as an actual investment in the individual securities that make up this basket. This might in the case of broad market derivatives or fund of fund investments lead to minimal exposures to securities that are excluded from direct investments.
Derivatives have an effect on all metric calculations and as many of the reporting frameworks available to investors today do not cover the intricacies of derivatives, metrics are provided on a reasonable efforts basis.
Portfolios for which we report the sustainability metrics may include cash.
The information disclosed in this report, in particular treatment of derivatives and cash, may or may not correspond with investment characteristics of the fund and how the fund is managed. Therefore, sustainability metrics in this report may differ from other UBS reports produced on the same date.

UBS China Opportunity Equity Fund USD

ESG Report

Aggregation of ESG/Carbon data
ESG scores of holdings in the portfolio and the reference index are aggregated based on their respective individual weights and ESG scores (sumproduct).

The **Morningstar Sustainability Rating** helps investors see how mutual funds and ETFs are meeting environmental, social, and corporate governance (ESG) challenges. The rating is given as 1 to 5 "globes," with more globes indicating lower ESG risk. Notably, the number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category

Active ESG
Benchmark selection is driven by portfolio implementation considerations, in particular to closely reflect the financial objectives of the fund. For actively managed strategies, a traditional benchmark is generally selected to provide a broad investment universe to which active management is applied. This enables an assessment of the magnitude of ESG improvements against the traditional benchmark and allows the costs and benefits of investing sustainably to be assessed.

UBS China Opportunity Equity Fund USD

ESG Report

Important information about sustainable investing strategies
Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit UBS's ability to participate in or to advise on certain investment opportunities that otherwise would be consistent with the Client's investment objectives. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by UBS, and the investment instruments available to such portfolios may differ. Companies, product issuers and/or manufacturers may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues.

Reconciliation of Assets under Management (AuM)
This report does not contain reconciled AuM positions, it only takes in consideration positions with settlement date as of report date. This means that traded but not settled positions are not included. Therefore, AuM figures in this report may differ from other UBS reports produced on the same date.
