FUND OVERVIEW

The Fund aims to achieve a positive absolute return through a combination of capital growth and income on your investment regardless of market conditions. Under normal market conditions, the Fund will seek to gain at least 70% of its investment exposure through global equity securities (e.g. shares) and equity related securities. The Fund may also invest in fixed income (FI) securities (such as bonds), FI related securities, funds, money market instruments (MMIs) (i.e. debt securities with short-term maturities), deposits and cash. In order to achieve its investment objective and policy, the Fund will utilise a variety of investment strategies and instruments. In particular, the Fund will employ a fundamentals-based investment process focussed on identifying investments that are undergoing a sufficiently defined catalyst event. Catalyst events range across a broad spectrum and include, but are not limited to, announced mergers and acquisitions, company offers, spinoffs and split-offs, financial and strategic restructuring and management changes.

Key Risks Continued: Compared to more established economies, the value of investments in developing Emerging Markets may be subject to greater volatility due to differences in generally accepted accounting principles or from economic or political instability. The fund invests in fixed interest securities issued by companies which, compared to bonds issued or guaranteed by governments, are exposed to greater risk of default in the repayment of the capital provided to the company or interest payments due to the fund. The fund investments may be subject to liquidity constraints, which means that shares may trade less frequently and in small volumes, for instance smaller companies. As a result, changes in the value of investments may be more unpredictable. In certain cases, it may not be possible to sell the security at the last market price quoted or at a value considered to be fairest. Investors in this Fund should understand that the Fund is not guaranteed to produce a positive return and as an absolute return product, performance may not move in line with general market trends or fully benefit from a positive market environment. The Manager employs a risk management process to oversee and manage derivative exposure within the Fund. The strategies utilised by the Fund involve the use of derivatives to facilitate certain investment management techniques including the establishment of both 'long' and 'synthetic short' positions and creation of market leverage for the purposes of increasing the economic exposure of a Fund beyond the value of its net assets.
