This summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

HIGHLIGHTS

LO Funds - High Yield 2024 primary objective is to build a buy and maintain portfolio set up for a period ending in late 2024. It mainly invests in high yield corporate bonds denominated in EUR, USD, GBP and/or CHF. The Investment Manager aims to identify opportunities in the market through a judgemental approach utilizing fundamental analysis of economies, markets, sectors and issuers. The selection of securities is based on a three-step process (sectors, issuers, and issues), combining top-down (credit market evaluation) and bottom-up (specific issuer risk) approaches. The portfolio initially built at launch will remain quite the same until the maturity of the sub-fund in 2024 (buy-and-maintain strategy). Financial derivative instruments are used for the purpose of the investment strategy as well as systematic currency-hedging (non-EUR exposure hedged back to EUR at the portfolio level).

NET CUMULATIVE PERFORMANCE AND ANNUAL PERFORMANCE IN CHF Feb 17, 2020 - Apr 30, 2024

Past performance does not predict future returns. Performances are displayed net of all costs except any entry and exit fees. Please refer to the cost section. Performance is subject to taxation which depends on the personal situation of each investor and may change in the future. Returns may increase or decrease as a result of currency fluctuations.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Risks linked to the use of derivatives and financial techniques: Derivatives and other financial techniques used substantially to obtain, increase or reduce exposure to assets may be difficult to value, may generate leverage, and may not yield the anticipated results. All of this could be detrimental to fund performance.

Concentration risk: To the extent that the fund's investments are concentrated in a particular country, market, industry, sector or asset class, the fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry, sector or asset class.

Emerging market risk: Significant investment in emerging markets may expose to difficulties when buying and selling investments. Emerging markets are also more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.

Before taking any investment decision, please read the latest version of the prospectus, the articles of incorporation, the Key Information Documents (KIDs) and the latest annual report and semi-annual report. Please pay attention to the Appendix B "Risk Factors Annex" of the prospectus.

Incorporation of extra-financial risks into the investment decision process may result in underweighting of profitable investments from the sub-fund's investment universe and may also lead the management of the sub-fund to underweight investments that will continue to perform. Sustainability risks may lead to a significant deterioration in the financial profile, profitability or reputation of an underlying investment and may therefore have a significant impact on its market price or liquidity.

This product is not a financial product subject to Article 8 or Article 9 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial sector (the "SFDR"). The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

GLOSSARY

Credit Ratings: The credit ratings breakdown mentioned for convertible funds is a blend of ratings performed internally as well as ratings provided by external sources.

Risk and Reward Profile: This summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

Total Expense Ratio (TER): The total fees involved in managing and operating a fund. The TER included the annual management fee and other charges, for example legal, admin, and audit costs (source: annual audited reports or semi annual non audited reports). The Total Expense Ratio (TER) is calculated twice per year and is subject to change between calculation dates.

Volatility: A statistical measure of the fluctuations of a security's price. It can also be used to describe fluctuations in a particular market. High volatility is an indication of higher risk.

Sharpe Ratio: A measure of risk-adjusted performance. The higher the ratio, the better risk-adjusted performance has been.

Drawdown: A draw down is usually quoted as the percentage between the peak and trough of an investment during a specific period. It can help to compare an investment's possible reward to its risk.

Correlation: Correlation is a measure of how securities or asset classes move in relation to each other. Highly correlated investments tend to move up and down together while investments with low correlation tend to perform in different ways in different market conditions, providing investors with diversification benefits. Correlation is measured between 1 (perfect correlation) and -1 (perfect opposite correlation). A correlation

coefficient of 0 suggests there is no correlation.

Tracking Error: A measure of how closely an investment portfolio follows the index against which it is benchmarked.

Bond Floor: The lowest value that convertible bonds can fall to, given the present value of the remaining future cash flows and principal repayment. The bond floor is the value at which the convertible option becomes worthless because the underlying stock price has fallen substantially below the conversion value.

Delta: The ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative.

Premium: If a fixed-income security (bond) is purchased at a premium, existing interest rates are lower than the coupon rate. Investors pay a premium for an investment that will return an amount greater than existing interest rates.

Yield to Maturity: The rate of return anticipated on a bond if it is held until the maturity date.

Coupon: The interest rate stated on a bond when it's issued.

Modified Duration: This formula is used to determine the effect that a 100-basis-point (1%) change in interest rates will have on the price of a bond.

Average Duration: The average modified duration of the portfolio expressed in years.

Expected Loss: Annual average expected loss to the portfolio expressed in percent.

Attachment Point: The modelled probability of a negative portfolio return in any given year.

FROC (Fixed Rate of Operational Costs): It cover the Operational Costs directly incurred by the Company ("Direct Costs") and those resulting from the activities carried out by the Management Company on behalf of the Company ("Fund Servicing Costs").

A summary of investor rights and information on the integration of sustainability risks are available on <https://am.lombardodier.com/home/asset-management-regulatory-disc.html>. An investment in the Fund is not suitable for all investors. Making an investment in a Fund is speculative. There can be no assurance that the Fund's investment objective will be achieved or that there will be a return on capital. Past or estimated performance is not necessarily indicative of future results and no assurance can be made that profits will be achieved or that substantial losses will not be incurred. Where the fund is denominated in a currency other than an investor's base currency, changes in the rate of exchange may have an adverse effect on price and income. All performance figures reflect the reinvestment of interest and dividends and do not take account the commissions and

costs incurred on the issue and redemption of shares/units; performance figures are estimated and unaudited. Net performance shows the performance net of fees and expenses for the relevant fund/share class over the reference period. This document does not contain personalized recommendations or advice and is not intended to substitute any professional advice on investment in financial products. Before making an investment in the Fund, an investor should read the entire Offering Documents, and in particular the risk factors pertaining to an investment in the Fund, consider carefully the suitability of such investment to his/her particular circumstances and, where necessary, obtain independent professional advice in respect of risks, as well as any legal, regulatory, credit, tax, and accounting consequences.
