#### Are there any other particular risks?

The following risks may be materially relevant but may not always be

adequately captured by the synthetic risk indicator and may cause additional loss:

- Operational risk and risks related to asset safekeeping: In specific circumstances, there may be a material risk of loss resulting from human error, inadequate or failed internal systems, processes or controls, or from external events.
- Risks linked to the use of derivatives and financial techniques: Derivatives and other financial techniques used substantially to obtain, increase or reduce exposure to assets may be difficult to value, may generate leverage, and may not yield the anticipated results. All of this could be detrimental to fund performance.
- Model Risk: Models may be misspecified, badly implemented or may become inoperative when significant changes take place in the financial markets or in the organization. Such a model could unduly influence portfolio management and expose to losses.
