

## RobecoSAM Climate Global Bonds FH EUR

RobecoSAM Climate Global Bonds is an actively managed fund that invests in bonds globally. The selection of these bonds is based on fundamental analysis. The fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well below 2°C. The fund invests in worldwide bonds and other marketable debt securities and instruments (which may include short dated fixed or floating rate securities) issued or guaranteed by OECD member states and by companies based in OECD countries. The fund's objective is also to provide long term capital growth.

### Performance

Indexed value (until 31-03-2024) - Source: Robeco

### Performance

Based on transaction prices, the fund's return was 0.69%.

The fund posted a positive absolute return in March as Global government bond yields traded sideways. The fund's steeper positions in United States, Canada, Sweden and New Zealand detracted from performance while contribution from credits and government related was positive.

### Market development

March saw a rangebound moves in rates. In the first half of the month rates generally declined, while interest rates rose somewhat during the second half of the month. 10-year German Bunds ended the month 11 bps lower at 2.30%, while US 10-year Treasuries ended the month 2 bps higher at 4.20%. UK Gilts saw a strong positive performance over the month, as rates declined due to inflation coming in below expectations. March saw two notable central bank meetings. The first was from the Swiss National Bank as it became the first DM central bank to cut rates during its quarterly meeting. The second was the Bank of Japan which decided to increase the policy rate for the first time in 17 years, moving it from -0.1% to 0%. General risk sentiment was very positive during the month, which also benefited Italian government bonds; the yield difference with German Bunds decreased from 155 bps to 137 bps.

### Expectation of fund manager

There has been a growing convergence among DM central banks that official rates reached their appropriate levels, and the next step should be a reduction, the BoJ being the exception. This matters for the general direction of interest rates as it should reduce the risk of a new peak in rates in this cycle. While moving in unison towards the direction of official rates, ideas on the pace with which rates could be brought to neutral differ across economies. The US, for example, has shown a stronger resilience to the tightening of monetary conditions than the Eurozone. That is why we favour duration positions in Euro rates. The normalization of policy rates should also be accompanied by steepening yield curves, and we continue to hold/add to positions that would benefit from such a move. We prefer Greek government bonds above Italian bonds due to the difference in issuance and expected stability of economic growth.

### Fund price

31-03-24	EUR	83.68

Green Bonds (% , Weighted)	9.2	2.7

### Changes

RobecoSAM Climate Global Bonds: With effect from 10 March 2021, the benchmark has been changed from Bloomberg Barclays Global Aggregate Index to Solactive Paris Aware Global Aggregate Index.

### Sector allocation

At month-end, the fund held overweight positions in Sweden, France, Austria, Brazil, Thailand, Mexico and the Netherlands versus underweights in the United States, China and Japan. The overall beta of the portfolio is equal to 1.5 while the credit beta is 1.0 (only corporate and EMD bonds). Within the corporate allocation, we have a clear preference for euro swap spreads, supranational bonds and covered bonds over corporate bonds. Given the still rich valuations in the different credit spread sectors and further potential spread widening risk, the fund is still underweight in some IG hard and EMD beta, while it is overweight in swap spreads via SSAs.

Sector allocation		Deviation index	
Treasuries	42.2%	-21.4%	
Industrials	13.2%	-1.3%	
Agencies	13.1%	12.2%	
Financials	8.9%	-2.4%	
Covered	5.8%	5.7%	
Sovereign	4.8%	0.8%	
Utilities	2.6%	1.1%	
Supranational	1.5%	-2.5%	
Local Authorities	1.0%	0.9%	
Cash and other instruments	6.9%	6.9%	

### Currency allocation

The fund was overweight in the yen versus underweight in the USD, but closed the position in the last week of the month and replaced it with a bigger underweight in JGBs. We consider the yen a strong value case given its long-term valuation play, our view that the Fed has completed its final hike and is signaling rate cuts on the near horizon and given that the BoJ has finally started to acknowledge that its policy mix needs to change from very easy to very tight. Indeed Japan is facing higher levels of inflation and wage growth, while economic growth remains relatively strong in the services sector. Hence we are expecting some important steps from the BoJ such as further tweaks to the YCC policy and raising the policy rate out of negative territory. For now, the portfolio has very moderate FX risk.

Currency allocation		Deviation index	
Euro	99.2%	-0.8%	
U.S. Dollar	0.3%	0.3%	
Mexico New Peso	0.3%	0.3%	
Pound Sterling	0.2%	0.2%	
Singapore Dollar	0.1%	0.1%	
Swiss Franc	0.1%	0.1%	
Colombian Peso	-0.1%	-0.1%	
Australian Dollar	0.1%	0.1%	
Indonesian Rupiah	-0.1%	-0.1%	
Romanian New Leu	-0.1%	-0.1%	
Czech Koruna	0.1%	0.1%	
Chilean Peso	-0.1%	-0.1%	

### Duration allocation

The duration of the fund is close to equal to that of the index level. Most notable is the underweight in Japan, while we have maintained our overweight duration positions in the US and Europe and have added to duration in Canada and emerging local countries like Brazil and Mexico. In the portfolio overall, we retain our preference for UK Gilts and US Treasuries over Japan and Euro government bonds. Over the past few quarters, we have been building steeper positions in the US, New Zealand, Canada and Sweden, as we expect steepening pressure to build as recession risks rise.

Duration allocation		Deviation index	
Euro	2.6	0.1	
U.S. Dollar	1.8	0.0	
Pound Sterling	0.9	0.0	
Danish Kroner	0.2	0.2	
Indonesian Rupiah	0.2	0.1	
Norwegian Kroner	0.2	0.2	
New Zealand Dollar	0.2	0.2	
Korean Won	0.2	0.2	
Swedish Kroner	-0.2	-0.2	
Mexico New Peso	0.1	0.0	
Thailand Baht	0.1	0.0	
Indian Rupee	-0.1	-0.1	
Other	0.3	-0.5	

### Rating allocation

The fund has roughly 47% invested in AAA/AA bonds, mainly comprising of Government Related, Covered bonds and Dutch and German government bonds. The average rating of the fund is in line with that of the index: A1/A2. The fund kept its conservative stance in corporate and emerging credit markets, targeting a credit beta of one. Furthermore, even though corporate spreads tightened in the past few months, we think risks are tilted to wider spreads, as economic fundamentals deteriorate, while central banks keep tightening policy. Overall exposure to HY remains low at just 2.5%.

Rating allocation		Deviation index	
AAA	22.8%	14.0%	
AA	23.7%	-7.2%	
A	13.0%	-14.9%	
BAA	31.1%	-0.9%	
BA	2.5%	2.2%	
NR		-0.1%	
Cash and other instruments	6.9%	6.9%	

## ESG Important information

The sustainability information in this factsheet can help investors integrate sustainability considerations in their process. This information is for informational purposes only. The reported sustainability information may not at all be used in relation to binding elements for this fund. A decision to invest should take into account all characteristics or objectives of the fund as described in the prospectus. The prospectus is available on request and free of charge on the Robeco website.

## Sustainability

Sustainability is incorporated in the investment process via exclusions, ESG integration, a minimum allocation to ESG-labeled bonds as well as a carbon footprint target for both the government bond component and the credits component. For government bonds, the fund complies with Robeco's exclusion policy for countries. For credits, the fund does not invest in companies that are in breach of international norms and applies the activity-based exclusions of Article 12 of the EU regulation on Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks through exclusions as per Robeco's exclusion policy. ESG factors, including climate change, are integrated in the bottom-up security analysis to assess the decarbonization potential and the impact of financially material ESG risks on the issuer's fundamental quality. Furthermore, the fund invests at least 2.5% in green, social, sustainable, and/or sustainability-linked bonds. In the portfolio construction the fund targets carbon footprints at least equal to or better than the government bond component and the credit component of the Solactive Paris Aware Global Aggregate Index, respectively. This is to ensure the fund is aligned with the desired decarbonization trajectory of an average 7% year on year.

The following sections display the ESG-metrics for this fund along with short descriptions. For more information please visit the sustainability-related disclosures.

The index used for all sustainability visuals is based on Solactive Paris Aware Global Aggregate Index (hedged into EUR).

## SDG Impact Alignment

This distribution across SDG scores shows the portfolio weight allocated to companies with a positive, negative and neutral impact alignment with the Sustainable Development Goals (SDG) based on Robeco's SDG Framework. The framework utilizes a three-step approach to assess a company's impact alignment with the relevant SDGs and assign a total SDG score. The score ranges from positive to negative impact alignment with levels from high, medium or low impact alignment. This results in a 7-step scale from -3 to +3. For comparison, index figures are provided alongside that of the portfolio. Only holdings mapped as corporates are included in the figures.

Use of the United Nations Sustainable Development Goals (SDG) logos, including the colour wheel, and icons shall only serve explanatory and illustrative purposes and may not be interpreted as an endorsement by the United Nations of this entity, or the product(s) or service(s) mentioned in this document. The opinions or interpretations shown in this document hence do not reflect the opinion or interpretations of the United Nations.

Sustainalytics ESG Risk Rating

The Portfolio Sustainalytics ESG Risk Rating chart displays the portfolio's ESG Risk Rating. This is calculated by multiplying each portfolio component's Sustainalytics ESG Risk Rating by its respective portfolio weight. The Distribution across Sustainalytics ESG Risk levels chart shows the portfolio allocations broken into Sustainalytics' five ESG risk levels: negligible (0-10), low (10-20), medium (20-30), high (30-40) and severe (40+), providing an overview of portfolio exposure to the different ESG risk levels. Index scores are provided alongside the portfolio scores, highlighting the portfolio's ESG risk level compared to the index.

Only holdings mapped as corporates are included in the figures.

Environmental Intensity - Government bond allocation

Environmental intensity expresses a portfolio's aggregate environmental efficiency. The portfolio's aggregate carbon intensity is based on the related country emissions. We divide each country's carbon emissions, measured in tCO<sub>2</sub>, by the population size or gross domestic product to obtain the country's carbon intensity. The portfolio's aggregate intensity figures are calculated as a weighted average by multiplying each assessed portfolio component's intensity figure with its respective position weight. Index intensities are provided alongside the portfolio intensities, highlighting the portfolio's relative carbon intensity. Only holdings mapped as sovereign bonds are included in the figures.

Environmental Footprint - Credit allocation

Environmental footprint expresses the total resource consumption of the portfolio per mUSD invested. Each assessed company's footprint is calculated by normalizing resources consumed by the company's enterprise value including cash (EVIC). We aggregate these figures to portfolio level using a weighted average, multiplying each assessed portfolio constituent's footprint by its respective position weight. For comparison, index footprints are shown besides that of the portfolio. The equivalent factors that are used for comparison between the portfolio and index represent European averages and are based on third-party sources combined with own estimates. As such, the figures presented are intended for illustrative purposes and are purely an indication. Only holdings mapped as corporates are included in the figures.

ESG Labeled Bonds

The ESG-labeled bond chart displays the portfolio's exposure to ESG-labeled bonds. Specifically, green bonds, social bonds, sustainability bonds, and sustainability-linked bonds. This is calculated as a sum of weights for those bonds in the portfolio that have one of above mentioned labels. Index exposure figures are provided alongside the portfolio exposure figures, highlighting the difference with the index.

Country Sustainability Ranking

The charts displays the portfolio's Total, Environmental, Social and Governance scores following Robeco's Country Sustainability Ranking methodology. These are calculated using the portfolio components' weights and respective country's scores. The scores includes considerations of more than 50 separate indicators, each capturing a unique sustainability feature across environmental, social and governance dimensions at the country level. Index scores are provided alongside the portfolio scores, highlighting the portfolio's relative ESG performance. Only holdings mapped as sovereign bonds are included in the figures.

Source: Robeco. Certain underlying data is sourced from third parties (such as e.g. IMF, OECD and World Bank including Worldwide Governance Indicators Control of Corruption, as well as content from ISS and SanctIO).

Engagement

Robeco distinguishes between three types of engagement. Value Engagement focuses on long-term issues that are financially material and/or are causing adverse sustainability impacts. The themes can be broken into Environmental, Social, Governance, or Voting-related. SDG Engagement aims to drive a clear and measurable improvement in a company's SDG contribution. Enhanced engagement is triggered by misconduct and focuses on companies severely breaching international standards. The report is based on all companies in the portfolio for which engagement activities have taken place during the past 12 months. Note that companies may be under engagement in multiple categories simultaneously. While the total portfolio exposure excludes double counting, it may not equal the sum of individual category exposures.

	Portfolio exposure	# companies engaged with	# activities with companies engaged with
Total (* excluding double counting)	4.98%	18	65
Environmental	2.51%	10	36
Social	2.14%	6	19
Governance	0.87%	2	2
Sustainable Development Goals	0.00%	1	7
Voting Related	0.28%	1	1
Enhanced	0.00%	0	0

Exclusions

The Exclusions charts display the degree of adherence to exclusion applied by Robeco. For reference, index exposures are shown beside that of the portfolio. Thresholds are based on revenues unless otherwise indicated. For more information about the exclusion policy and which level applies, please refer to the Exclusion Policy and Exclusion List available on Robeco.com.

## Investment policy

RobecoSAM Climate Global Bonds is an actively managed fund that invests in bonds globally. The selection of these bonds is based on fundamental analysis. The fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2° C. The fund invests in worldwide bonds and other marketable debt securities and instruments (which may include short dated fixed or floating rate securities) issued or guaranteed by OECD member states and by companies based in OECD countries. The fund's objective is also to provide long term capital growth.

The fund promotes E&S (i.e. Environmental and Social) characteristics within the meaning of Article 8 of the European Sustainable Finance Disclosure Regulation, integrates sustainability risks in the investment process and applies Robeco's Good Governance policy. The fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2° C. The fund applies sustainability indicators, including but not limited to normative exclusions and activity-based exclusions in line with Article 12 of the EU regulation on Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmark.

The fund is managed against a benchmark that is consistent with the sustainable investment objectives pursued by the fund. It aims to align with the Paris Agreement requirements on greenhouse gas emission reduction. For corporate bonds the Benchmark aims to represent the performance of an investment strategy that is aligned with the technical standards for EU Paris Aligned benchmarks in areas such as exclusions and carbon reduction objectives. For investments in government bonds in the Benchmark, the long term aim is to strive for a 7% year-on-year decarbonization as long as this is realistically feasible and technical standards are not applicable. The Benchmark differs from a broad market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

## Fund manager's CV

Bob Stoutjesdijk is Portfolio Manager and member of Robeco's Global Macro team. He joined Robeco in 2019. He worked at Shell Asset Management Company as Portfolio Manager Fixed Income Sovereign Credit in the period 2011-2019. Prior to that, he was Portfolio Manager Fixed Income at SNS Asset Management. He started his career as Quantitative Analyst at APG Asset Management in 2008. Bob has a Master's in Economics & Business from Erasmus University Rotterdam and is a CAIA® Charterholder. Michiel de Bruin is Head of Global Macro and Portfolio Manager. Prior to joining Robeco in 2018, Michiel was Head of Global Rates and Money Markets at BMO Global Asset Management in London. He held various other positions before that, including Head of Euro Government Bonds. Before he joined BMO in 2003, he was, among others, Head of Fixed Income Trading at Deutsche Bank in Amsterdam. Michiel started his career in the industry in 1986. He holds a post graduate diploma investment analyses from the VU University in Amsterdam and is a Certified EFFAS Analyst (CEFA) charterholder. He holds a Bachelor's in Applied Sciences from University of Applied Sciences in Amsterdam. Stephan van IJendoorn is Portfolio Manager and member of Robeco's Global Macro team. Prior to joining Robeco in 2013, Stephan was employed by F&C Investments as a Portfolio Manager Fixed Income and worked in similar functions at Allianz Global Investors and A&O Services prior to that. Stephan started his career in the Investment Industry in 2003. He holds a Bachelor's in Financial Management, a Master's in Investment Management from VU University Amsterdam and is Certified European Financial Analyst (CEFA) Charterholder.

## Fiscal product treatment

The fund is established in Luxembourg and is subject to the Luxembourg tax laws and regulations. The fund is not liable to pay any corporation, income, dividend or capital gains tax in Luxembourg. The fund is subject to an annual subscription tax ('tax d'abonnement') in Luxembourg, which amounts to 0.05% of the net asset value of the fund. This tax is included in the net asset value of the fund. The fund can in principle use the Luxembourg treaty network to partially recover any withholding tax on its income.
