Ongoing Charges Figure† 0.25%

†The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Objectives and investment policy

- The Fund seeks to provide a combination of long-term capital appreciation with some income by investing in equity and fixed income securities, primarily through investment in other collective investment schemes.
- The Fund pursues an actively-managed investment strategy whereby the investment manager has discretion over the composition of the Fund's portfolio holdings and is not managed with reference to a benchmark index. However, as more particularly described below, the investment manager manages the Fund through pre-determined asset allocations to equity and fixed income securities using a combination of underlying collective investment schemes.
- The Fund will seek to achieve its investment objective by gaining exposure to a diversified portfolio composed approximately of 80% by value of equity securities and 20% by value of fixed income securities, which will, subject to the requirements of the Central Bank, be obtained predominantly via direct investment in passively managed exchange traded funds ("ETFs") or other collective investment schemes which track an index (together the "Target Funds"). The portfolio asset allocation may be reconstituted and rebalanced from time to time at the discretion of the investment manager. The Target Funds in which the Fund invests will be UCITS and may include other sub-funds of Vanguard Funds plc.
- It is intended that the Fund's indirect exposures, through its investment in the Target Funds, will be to: (1) shares of companies from developed and emerging markets; and (2) to fixed income securities, such as bonds, denominated in multiple currencies, from both developed and emerging markets issuers (for example, global investment grade debt, including treasury, government-related, corporate and securitised fixed-rate bonds). The Fund's exposure to the Target Funds is not intended to reflect any geographic or sectoral bias. The Fund will seek to indirectly hedge the non-EUR currency exposure within the fixed income allocation of the Fund's portfolio to EUR, by investing in EUR hedged share classes of the Target Funds.
- The Fund may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

† Synthetic Risk and Reward Indicator

Vanguard LifeStrategy® 80% Equity UCITS ETF

(EUR) Distributing - An exchange-traded fund

Performance summary**

EUR—Vanguard LifeStrategy® 80% Equity UCITS ETF

| Performance** | 1 month | Quarter | Year to date | 1 year | 3 years | 5 years | 10 years | Since inception |
|------------------------|---------|---------|--------------|--------|---------|---------|----------|-----------------|
| Fund (Net of expenses) | -2.57% | -3.38% | -5.57% | 12.17% | — | — | — | 12.06% |

**Figures for periods less than one year are cumulative returns. All other figures represent annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. The performance data does not take account of the commissions and costs incurred in the issue and redemption of shares. Basis of fund performance is NAV to NAV with gross income invested. Basis of index performance is total return. Performance and Data is calculated on closing NAV as at 28 February 2022.

Past performance is not a reliable indicator of future results.

Key investment risks

- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.
- Counterparty risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Liquidity risk. Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.
- Index tracking risk. The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.
- Index sampling risk. As the Fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the Fund may not, in the aggregate, approximate the full Index.
- Credit risk. The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Please also read the risk factors section in the prospectus and the Key Investor Information Document, both of which are available on the Vanguard website.

This document is for professional investors only (as defined under the MiFID II Directive) investing for their own account (including management companies (fund of funds) and professional clients investing on behalf of their discretionary clients). Not to be distributed to the public.

(EUR) Distributing - An exchange-traded fund

Investment risk information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Funds investing in fixed interest securities carry the risk of default on repayment and erosion of the capital value of your investment and the level of income may fluctuate. Movements in interest rates are likely to affect the capital value of fixed interest securities. Corporate bonds may provide higher yields but as such may carry greater credit risk increasing the risk of default on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

Some funds invest in emerging markets which can be more volatile than more established markets. As a result the value of your investment may rise or fall.

Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

The Funds may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

Some funds invest in securities which are denominated in different currencies. Movements in currency exchange rates can affect the return of investments.

ETF shares can be bought or sold only through a broker. Investing in ETFs entails stockbroker commission and a bid- offer spread which should be considered fully before investing.

For further information on risks please see the "Risk Factors" section of the prospectus on our website at <https://global.vanguard.com>.

Glossary for ETF attributes

The ETF attributes section on the first page contains a number of metrics that professional investors use to value individual securities against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the securities held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Earnings growth rate is a measure of growth in a company's net income (what remains after subtracting all the costs from a company's revenues) over a specific period (often one year). Earnings growth can apply to previous periods or estimated data for future periods.

Equity yield (dividend) is the dividend income earned by stocks, expressed as a percentage of the aggregate market value (or of net asset value, for a fund). Quoted historic yield is determined by dividing the gross distributions declared over the last 12 months by the average of the bid and ask unit prices, as at the date shown. The dividend yield stated on the factsheet applies to the underlying holdings of the ETF, and not the ETF itself.

Market capitalisation is the aggregate value of a company or stock and is calculated by multiplying the number of shares which are available to retail investors by the current price per share.

Median market cap (capitalisation) looks at all companies in a mutual fund portfolio and calculates the mid point market capitalisation. Market capitalisation represents the aggregate value of a company's stock.

Mid market share price is the price of a share between its offer and bid price.

Price book ratio compares a stock's market value to its book value (the accounting value of a stock). It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

Price earnings ratio (P/E ratio) of a stock is the price paid for a share divided by the annual profit earned by the firm per share. A stock with a price of £10 a share, and earnings last year of £1 a share, would have a P/E ratio of 10.

Return on equity is a measure of a company's profitability that reveals how much profit a company generates with the money shareholders have invested.
