The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU1965927921/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Global Corporate Bonds

Investor profile	Risk-tolerant
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Barclays Global Aggregate Corporate TR (EUR hedged) Index, administered by Barclays Bank Plc.
Reference portfolio (risk benchmark)	Barclays Global Aggregate Corporate TR (EUR hedged) Index
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to four places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	ID**, FC, TFC, TFD, FD10, XC, LC, XD CHF FCH10 USD FCH10	EUR CHF USD
Front-end load (payable by the investor)	ID**, FC, TFC, TFD, FD10, XC, XD, CHF FCH10, USD FCH10 LC	0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	ID**, FD10, CHF FCH10, USD FCH10 FC, TFC, TFD XC, XD LC	up to 0.4% up to 0.6% up to 0.2% up to 0.9%
Service Fee p.a. (payable by the sub-fund)*	ID**, FC, TFC, TFD, FD10, XC, LC, XD, CHF FCH10, USD FCH10	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	ID** FC, TFC, TFD, FD10, XC, LC, XD, CHF FCH10, USD FCH10	0.01% 0.05%
Launch date	ID**, FC TFC, TFD FD10 XC LC XD CHF FCH10, USD FCH10	March 31, 2015 December 5, 2017 January 15, 2018 November 15, 2018 May 15, 2019 May 29, 2019 February 26, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** In contrast with article 1 of the general section the ID share class is not exclusively offered in the form of registered shares.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest ESG Global Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Global Corporate Bonds is to achieve a return above that of the benchmark, Barclays Capital Global Aggregate Credit hedged (EUR), for the sub-fund.

At least 80% of the sub-fund's assets shall be invested globally in interest-bearing debt securities denominated in euro or hedged against the euro that have an investment grade status at the time of the acquisition.

Up to 20% of the sub-fund's assets may be invested in interest-bearing debt securities denominated in euro or hedged against the euro that do not meet the above-mentioned criteria as well as money market instruments and cash.

The sub-fund's investments in covered bonds shall be limited to 40% of the sub-fund's net asset value, asset-backed securities shall be limited to 20% of the sub-fund's net asset value. At least 50% of the sub-fund's assets shall be invested globally in corporate bonds.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may, amongst others, also be implemented through the use of the following derivative financial instruments: Bond index future contracts, FX-forwards, currency option futures, interest rate swaps, total return swaps, forward starting interest rate swaps, interest rate options, single name and index credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in Article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk

profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors. If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund's net assets in sustainable investments in accordance with Article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates

(1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the

position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus, including the assets mentioned in article 2 A. (j).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are expected to be components of the benchmark and the portfolio is expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate to a limited extent (e.g., by a positioning outside of the benchmark as well as underweighting or overweighting) and the actual degree of freedom is typically relatively low. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Specific risks

The sub-fund deliberately purchases the securities of issuers whose credit standing is considered by the market to be relatively good but not first rate (investment grade bonds). The opportunities resulting from the higher rates of interest in comparison to government bonds are thus countered by corresponding risks. Despite careful examination of the economic conditions and the financial condition and earnings capacity of issuers, the risk of a total loss of the value of individual securities purchased for the sub-fund cannot be ruled out completely.

The opportunities afforded by an investment of this type are therefore countered by significant risks.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Global Corporate Bonds

Legal entity identifier: 549300R7HHCUF1UTLL03

ISIN: LU0982744301

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 80% of the sub-fund's assets shall be invested globally in interest-bearing debt securities denominated in euro or hedged against the euro that have an investment grade status at the time of the acquisition. Up to 20% of the sub-fund's assets may be invested in interest-bearing debt securities denominated in euro or hedged against the euro that do not meet the above-mentioned criteria as well as money market instruments and cash. The sub-fund's investments in covered bonds shall be limited to 40% of the sub-fund's net asset value, asset-backed securities shall be limited to 20% of the sub-fund's net asset value. At least 50% of the sub-fund's assets shall be invested globally in corporate bonds. The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 20% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

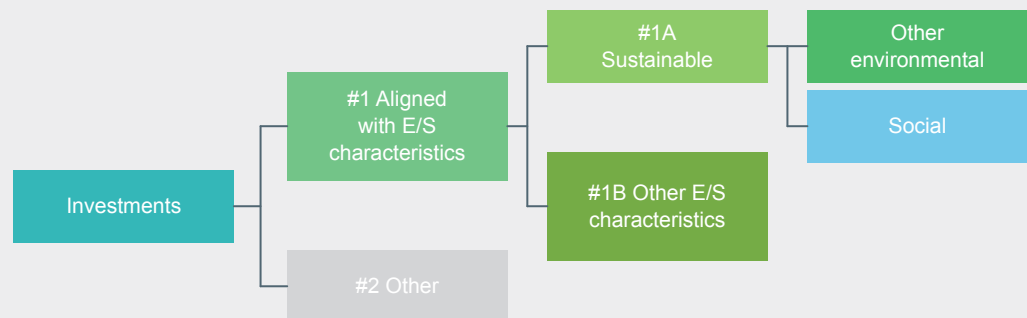

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0982744301/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Global Emerging Markets Equities

Investor profile	Risk-tolerant
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investments Hong Kong Limited, Level 60, International Commerce Centre, 1 Austin Road West, Kowloon, Hong Kong
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI EM (Emerging Markets)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg that is also an exchange trading day on the Hong Kong Stock Exchange.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest ESG Global Emerging Markets Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Global Emerging Markets Equities is to achieve an above average return.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

At least 60% of the sub-fund's assets are invested in equities.

A company is viewed as having its principal business activity in emerging-market countries if a significant part of its earnings or revenues is generated there.

Emerging markets are countries listed in the MSCI Emerging Markets Index or listed in the Standard & Poor's Emerging Markets Database (EMDB). Further, countries, which are listed as low or middle income (including both lower middle and higher middle income) by the World Bank, will be considered as Emerging Markets even if such countries are neither listed in the MSCI Emerging Markets Index nor in the EMDB but must not be included in the MSCI World Index.

At present, the emerging countries most significant for the sub-fund are mostly, but not exclusively, located in Asia, Eastern Europe and South America and include, among others, Brazil, China, India, Indonesia, Korea, Malaysia, Mexico, Russia, South Africa, Taiwan, Thailand and Turkey.

If investments are effected in countries that do not yet possess a regulated market, these securi-

ties shall be considered as unlisted financial instruments.

In compliance with the investment limits specified in Article 2 B. of the general section of the Sales Prospectus, the investment policy may use derivative techniques to achieve the investment objective and implement the investment strategy, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions or to the extent permitted by the Grand-Ducal Regulation of February 8, 2008 and article 41 (1) of the Law of 2010. In case that a derivative is embedded into the depository receipt, such derivative complies with the provisions as set out in article 41 (1) of the Law of 2010 and articles 2 and 10 of the Grand-Ducal Regulation of February 8, 2008.

The sub-fund may invest more than 10% of the sub-fund's assets in securities that are traded on the Moscow Exchange (MICEX-RTS).

A maximum of 30% of the sub-fund's assets may be invested in equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants of issuers that do not fulfil the requirements of the preceding paragraphs.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 5% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in Article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The following investment restriction applies to the sub-fund due to a possible registration in Korea:

The sub-fund must invest more than 70% of the net assets in non-Korean Won-denominated assets.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and

principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter

must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 3% of the sub-fund's net assets in sustainable investments in accordance with Article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Specific risks

The exchanges and markets of emerging-market countries are subject to substantial fluctuations. The opportunities afforded by an investment are therefore countered by substantial risks. Political changes, restrictions on currency exchange, exchange monitoring, taxes, limitations on foreign capital investments and capital repatriation etc. can also affect investment performance.

Detailed information concerning custody and registration risks in Russia is provided in the general section of the Sales Prospectus.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Global Emerging Markets Equities

Legal entity identifier: 549300OD0ROCLWJDQR95

ISIN: LU1984220373

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 3% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Emissions to water (no. 8);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public. At least 60% of the sub-fund's assets are invested in equities.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 3% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

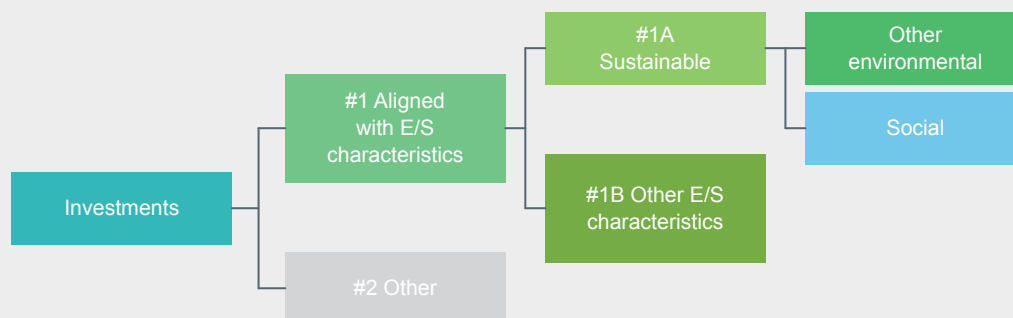

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1984220373/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Global High Yield Corporates

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investment Management Americas Inc., 345 Park Avenue, New York, NY 10154, United States of America
Performance benchmark	–
Reference portfolio (risk benchmark)	BofA ML Global High Yield Constrained
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Global High Yield Corporates, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Global High Yield Corporates is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Non-investment grade encompasses BB+ and below rated bonds, including bonds with D rating and non-rated bonds. In case of a split rating involving three rating agencies, the second best will prevail. If a security is rated by only two agencies, the lower of the two ratings will be used for the rating classification. If a security only has one rating, the single rating will be used. If there is no official rating, an internal rating will be applied in accordance with DWS internal guidelines.

Up to 30% of the sub-fund's assets may be invested in corporate bonds that do not meet the above-mentioned criteria.

In compliance with the investment limits specified in Article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative

financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund manager may also participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

In addition, the sub-fund's assets may be invested in all other permissible assets.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 25% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribu-

tion of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 10%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 20%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section “Efficient portfolio management techniques”. The selection of counterparties to any total return swap is subject to the principles as described in the section “Choice of counterparty” of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section “General Risk Warnings”, and in particular the section “Risks connected to derivative transactions” of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Global High Yield Corporates
Legal entity identifier:
ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund manager may also participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 25% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons** The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons. Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Global Logistics

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI World TR net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest ESG Global Logistics, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Global Logistics is to achieve an appreciation as high as possible of capital invested.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in shares, stock certificates and warrant-linked

bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants.

Issuers of these assets have their principal business activity in the sector of global trade development and logistics as well as products, technologies and services catering to the sector and related to its efficiency improvement.

The sub-fund management invests primarily in stocks of companies operating in the business field of logistics. Logistics refers to the overall process of managing how resources are acquired, stored, and transported to their final destination. This can include companies profiting from global trade development and include in particular delivery system providers, e-commerce related logistic systems or developers of new technologies for warehouse optimization and automation (improvement of processes related to a warehouse, meaning the execution and shipment of orders including the inventory management and delivery). Furthermore, companies active in storage of freight and helping the economy to refocus on local production, supply chain optimi-

zation as well as traditional infrastructure providers such as airports, toll road providers or shipping companies are in focus. Companies offering different forms of transportation (e.g. railroad, busses, cars, planes) or that are active in shaping the transition to more efficient forms of transportation (e.g. electric, hydrogen, sustainable aviation fuel, etc.) might be included.

A maximum of 20% of the sub-fund's net assets will be invested in stocks of companies headquartered in China.

The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges

and markets issued by international financial institutions. Equity investments may also be made through GDRs listed on recognized exchanges and markets, through ADRs issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008, and article 41 (1) of the Law of 2010. In case that a derivative is embedded into the depository receipt, such derivative complies with the provisions as set out in article 41 (1) of the Law of 2010 and articles 2 and 10 of the Grand-Ducal Regulation of February 8, 2008.

A maximum of 30% of the sub-fund's total assets may be invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates of international issuers that do not satisfy the requirements of the preceding paragraph.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-funds' net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries.

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other Undertakings for Collective Investment in Securities and/or other collective investment undertakings as defined in A. (e), an investment limit of 5% shall apply to this sub-fund.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social

characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a

letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the

company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the

fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk Management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Global Logistics

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in shares, stock certificates and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants of issuers having their principal business activity related to global trade development, the logistics sector and its value chain in general. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Healthy Living

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI World Healthcare
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, XC, TFC	EUR
Front-end load (payable by the investor)	FC, FD, XC, TFC LC, LD	0% up to 5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD, TFC LC, LD XC	up to 0.75% up to 1.5% up to 0.35%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, LC, LD, XC, TFC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, FD, LC, LD, XC, TFC	0.05%
Launch date	FC, FD, LC, LD, XC TFC	September 30, 2021 October 15, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Healthy Living, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU)

2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Healthy Living is to achieve long term

capital appreciation by investing at least 80% of net assets in equity securities of companies in the health care and consumer health sectors.

The sub-fund's objective is to invest in the whole healthcare continuum ranging widely from prevention through promotion of physical and mental well-being to treatment of chronic diseases. To be considered part of the health care

or consumer health sector, companies must generate a part of their revenues from that sector. Industries in the health care sector include pharmaceuticals, biotechnology, medical technology, medical equipment and supplies, health care services and technology as well as managed care and life sciences tools. Life Science Tools companies are suppliers of products and solutions for biopharma research and manufacturing applications, e.g. cell analysis, sample preparation and separation instrumentations, reagents, cell culture media, bioreactors, next generation DNA sequencing applications etc. Portfolio management considers consumer health care sector companies to include companies that provide products or services that promote or aid in achieving a healthy lifestyle (for example, healthy food and nutrition companies, athletic apparel and gym operators).

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by international companies.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

At least 60% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 25% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the

company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries.

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net asset value of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real

estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Healthy Living

Legal entity identifier: 254900DIR686E6QI4T43

ISIN: LU2379121283

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of net assets are invested in equity securities of companies in the health care and consumer health sectors. At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by international companies.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as

well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 60% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 25% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

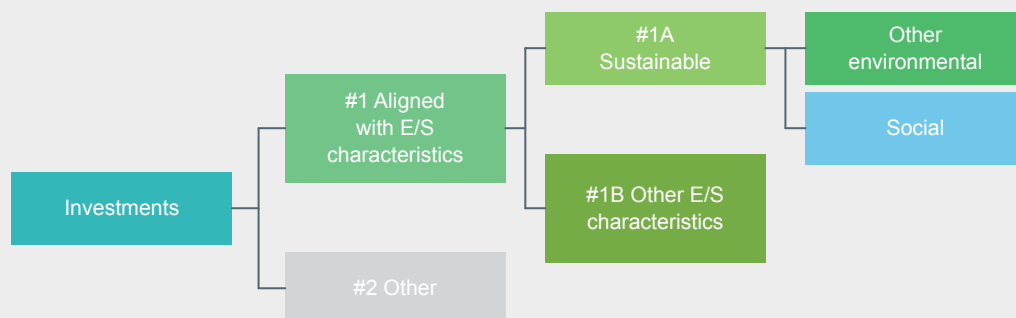

Up to 40% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2379121283/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Local Emerging Markets Debt

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	JPM GBI-EM Diversified in EUR, administered by J. P. Morgan Securities LLC.
Reference portfolio (risk benchmark)	JPM GBI-EM Diversified in EUR, administered by J. P. Morgan Securities LLC.
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Local Emerging Markets Debt, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Local Emerging Markets Debt is to achieve high income and capital appreciation that exceeds the benchmark J.P. Morgan ESG GBI – EM Global Diversified in EUR.

At least 80% of the sub-fund's assets shall be invested globally in debt securities denominated in emerging market currencies issued by sovereigns,

quasi-sovereigns (government owned corporates/ companies/agencies) or supra-nationals.

Emerging Markets are defined as countries that are part of the index 'JP Morgan EMBI Global Diversified' or that are classified as 'emerging market and developing economies' by the International Monetary Fund (World Economic Outlook). Countries listed as low or middle (both lower middle and higher middle) income by the World Bank will determine if a country is an emerging market if such country is not listed in the JP Morgan EMBI Global Div. index and if it is not classified as 'emerging market and developing economy' by the International Monetary Fund.

A maximum of 20% of the sub-fund's assets may be invested in interest-bearing debt securities that do not meet the above-mentioned criteria.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and

the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

Investments in domestic securities via the Chinese onshore market will be done in listed securities, via direct access to the inter-bank bond market (CIBM) or via Bond Connect. When investing via Bond Connect the investment limit of 10% must be respected.

Due to the fact that investments made by the sub-fund and income received by the sub-fund

may be denominated in Renminbi, investors should be aware of a possible depreciation of the Renminbi.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund will not invest in ABS or MBS securities.

The sub-fund will not invest in any securities that are rated below B- by S&P or an equivalent rating from another rating agency as at the date of investment. In the event that any securities held by the sub-fund are subsequently downgraded to a rating below B-, the sub-fund manager may maintain a maximum total exposure of 3% of the sub-fund's NAV to such downgraded securities but will divest any such security that has not been upgraded to a rating of at least B- within six months of its downgrade. In case of a split rating involving three rating agencies, the second-best will prevail. If a security is rated by only two agencies, the lower of the two ratings will be used for the rating classification. If a security only has one rating, the single rating will be used. If there is no official rating, an internal rating will be applied in accordance with DWS internal guidelines.

In compliance with the investment limits specified in Art. 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards (e.g. FX-forwards, non-deliverable forwards (NDFs), futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

Non-deliverable forwards (NDFs) are forward currency transactions, which can be used to hedge the exchange rate between a freely convertible currency (usually the U.S. dollar or the euro) and a currency that is not freely convertible.

The following is stipulated in the NDF agreement:

- a specified amount in one of the two currencies,
- the forward price (NDF price),
- the maturity date,
- the direction (purchase or sale).

Unlike with a normal forward transaction, only a compensatory payment is made in the freely convertible currency on the maturity date. The amount of the compensatory payment is calculated from the difference between the agreed NDF price and the reference price (price on the maturity date). Depending on the price performance, the compensatory payment is either made to the purchaser or the seller of the NDF.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities.

ties. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),

- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the

economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14) ; and
- Investee countries subject to social violations (no 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee

companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Local Emerging Markets Debt

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10);
- Exposure to controversial weapons (no. 14); and
- Investee countries subject to social violations (no. 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 80% of the sub-fund's assets shall be invested globally in debt securities denominated in emerging market currencies issued by sovereigns, quasi-sovereigns (government owned corporates/companies/agencies) or supranationals. The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Mobility

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI World TR net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, XC	EUR
Front-end load (payable by the investor)	FC, FD, XC LC, LD	0% up to 5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD LC, LD XC	up to 0.75% up to 1.5% up to 0.35%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, LC, LD, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, FD, LC, LD, XC	0.05%
Launch date	FC, FD, LC, LD, XC	May 16, 2022

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest ESG Mobility, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Mobility is to achieve an appreciation as high as possible of capital invested.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in shares, stock certificates and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the theme "mobility". The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

The term "mobility" considers several aspects and nuances of mobility besides the classical fields of application like transportation and logistics it is also taking account the changing pattern of reachability and its impact on lifestyle and working environment. The relevant companies operate within the multi-layered mobility value chain/industries. This includes companies and their suppliers involved in the area like transportation, logistics, clean energy, autonomous driving, hydrogen application, battery technology, cloud computing, real estate, consumer discretionary, IT, real estate, online platform, food delivery, sport & lifestyle vehicles.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions. Equity investments may also be made through Global Depository Receipts (GDRs) listed on recognized exchanges and markets, through American Depository Receipts (ADRs) issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008 and article 41 (1) of the Law of 2010. In case that a derivative is embedded into the depository receipt, such derivative

complies with the provisions as set out in article 41 (1) of the Law of 2010 and articles 2 and 10 of the Grand-Ducal Regulation of February 8, 2008.

A maximum of 30% of the sub-fund's total assets may be invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates of international issuers that do not satisfy the requirements of the preceding paragraph.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries.

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other Undertakings for Collective Investment in Securities and/or other collective investment undertakings as defined in A. (e), an investment limit of 5% shall apply to this sub-fund.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG

database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG

assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weap-

ons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in environmentally sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 1: Zero hunger
- Goal 2: Clean water and Sanitation
- Goal 3: Affordable and clean energy
- Goal 4: Sustainable cities and communities
- Goal 5: Responsible consumption & production
- Goal 6: Climate action
- Goal 7: Life below water
- Goal 8: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as environmentally sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is environmentally sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered environmentally sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Mobility
Legal entity identifier: 254900YCVDPCKP4IYF04
ISIN: LU2463037890

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of environmentally sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 2: Zero hunger
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as environmentally sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is environmentally sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered environmentally sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in shares, stock certificates and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the theme "mobility".

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as

well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (**#1 Aligned with E/S characteristics**). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (**#1A Sustainable**). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU Taxonomy is 10%.

Up to 49% of the investments are not aligned with these characteristics (**#2 Other**). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2463037890/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Multi Asset Balance

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	50% MSCI AC World and 50% Barclays Global Aggregate Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Multi Asset Balance, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Balance is to achieve a positive mid- to long-term investment performance taking in account the opportunities and risks of the international capital markets.

The sub-fund is actively managed and is not managed in reference to a benchmark.

Up to 65% of the sub-fund's assets will be invested in equities, equity funds, certificates on equities or equity indices and equity warrants.

At least 35% of the investment sub-fund's assets must be invested in interest-bearing securities such as government bonds, corporate bonds or convertible bonds of domestic and foreign issuers, in certificates on bonds or bond indices, or in bond funds.

Up to 49% of the investment sub-fund's assets may be invested in money market instruments, deposits with credit institutions, in money market funds and in money market funds with a short maturity structure.

In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent

that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus. The sub-fund's investments in asset-backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

The sub-fund also intends from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets. For this purpose and within this 10% limit, the sub-fund may acquire derivative financial instruments whose underlying instruments are commodity indices and sub-indices in accordance with the 2008 Regulation, equities, interest-bearing securities, convertible bonds, convertible debentures and warrant-linked bonds, index certificates, participation and dividend-right certificates and equity warrants, as well as 1:1 certificates (including

Exchange Traded Commodities (ETCs)) the underlying of which are single commodities/ precious metals and that meet the requirements of transferable securities as determined in 2 A.a) of the general section of the Sales Prospectus. When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008. The sub-fund does not invest into futures on soft commodities, e.g. cotton, sugar, rice and wheat as well as all manner of livestock.

Notwithstanding article 2 B. (i), the following applies:

The sub-fund's assets may be used to acquire shares of other UCITS and/or UCLs as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCLs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties.

Investments in shares of other UCLs other than UCITS must not exceed 30% of the sub-fund's net assets in total.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed

by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via

the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus at least 25% of the

sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in such equity capital investments as defined in article 2 (8) of the German Investment Tax Act that may be acquired for the sub-fund in accordance with the Articles of Incorporation and this Sales Prospectus (mixed fund).

Equity capital investments in this respect are

- equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:
 - i) units of investment funds;
 - ii) units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
 - iii) units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
 - iv) units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
 - v) units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.
- units of investment funds, which in accordance with their terms and conditions of investment invest more than 50% of their value or more than 50% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of

corporations in the amount of 51% of their value; if the terms and conditions of an equity fund make provisions for a percentage higher than 51% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;

- units of investment funds, which in accordance with their terms and conditions of investment invest at least 25% of their value or at least 25% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 25% of their value; if the terms and conditions of a balanced fund make provisions for a percentage higher than 25% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds that carry out a valuation at least once per week in the amount of the percentage of their assets published on each valuation date that they actually invest themselves, or as a fund of fund, in units of corporations.

Units of corporations as defined in indents 2 through 4 are

- units of corporations admitted to official trading on a stock exchange or admitted to, or included in, another organized market;
- units of corporations that are not real estate companies and that are domiciled in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area and are subject there to corporate income tax and are not exempt from it;
- units of corporations that are not real estate companies and that are domiciled in a third country and are subject there to corporate income tax of at least 15% and are not exempt from it; and
- units of other investment funds, which in turn meet the requirements of indents 2 through 4 and of this sentence, in the respective amount specified there.

However, units of corporations are not those that correspond to the categories as defined in indent 1 (i) to (v) above or are held indirectly via partnerships.

Equity capital investments indirectly held by the sub-fund via partnerships are not equity capital investments.

Individual investment fund units may only be taken into consideration once for the purposes of determining the daily equity capital investment rate.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is

a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Multi Asset Balance

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may invest up to 65% in equities, equity funds, certificates on equities or equity indices and equity warrants. At least 35% of the investment sub-fund's assets must be invested in interest-bearing securities such as government bonds, corporate bonds or convertible bonds of domestic and foreign issuers, in certificates on bonds or bond indices, or in bond funds. Up to 49% of the investment sub-fund's assets may be invested in money market instruments, in money market funds and in money market funds with a short maturity structure or in cash. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element

is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (**#1 Aligned with E/S characteristics**). Within this category, at least 20% of the sub-fund's assets qualify as sustainable investments (**#1A Sustainable**). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2%.

Up to 49% of the investments are not aligned with these characteristics (**#2 Other**). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Multi Asset Defensive

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	iBoxx EUR Overall (65%) and MSCI THE WORLD HIGH DIVIDEND INDEX in EUR (35%)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

Overview of the share classes

Currency of the share class	LD, ND, PFD, LC, NC, TFC	EUR
Front-end load (payable by the investor)	LD, LC ND, NC PFD, TFC	up to 3% up to 1% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LD, LC ND, NC PFD TFC	up to 1.1% up to 1.3% up to 0.6% up to 0.55%
Service Fee p.a. (payable by the sub-fund)*	LD, ND, PFD, LC, NC, TFC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	LD, ND, PFD, LC, NC, TFC	0.05%
Launch date	LD, ND, PFD LC, NC TFC	June 24, 2019 February 11, 2020 March 31, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest ESG Multi Asset Defensive, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Defensive is to achieve a positive mid- to long-term investment performance taking in account the opportunities and risks of the international capital markets. The defensive character of the strategy is achieved through an overweighting of fixed income investments and a limitation of equity investments.

The sub-fund is actively managed and is not managed in reference to a benchmark.

Up to 100% of the sub-fund's assets may be invested in interest-bearing securities, in certificates on, for example bonds, indices, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend-right certificates, in derivatives as well as in money market instruments, deposits and cash.

Up to 35% of the sub-fund's assets will be invested in equities, equity funds, certificates on equities or equity indices and equity warrants.

The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value.

Up to 10% of the sub-fund's assets may be invested in certificates on precious metals and precious metals indices, as well as in funds. According to article 2 A. (j), investment in the certificates listed here is only permitted if they are 1:1 certificates qualifying as transferable securities. When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

The sub-fund will not invest more than 10% of its assets in units or shares of other UCITS or other UCIs in order to be eligible for investment by UCITS governed by the UCITS Directive.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and

the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities.

ties. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the

economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies.

An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Notwithstanding article 2 B. (i), the following applies:

The sub-fund's assets may be used to acquire shares of other UCITS and/or UCIs as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties.

Investments in shares of other UCIs other than UCITS must not exceed 30% of the sub-fund's net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Multi Asset Defensive

Legal entity identifier: 549300EYR1MMK08S1P71

ISIN: LU1935133790

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. Up to 100% of the sub-fund may invest in interest-bearing securities, in certificates on, for example bonds, indices, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend-right certificates, in derivatives as well as in money market instruments, deposits and cash. Up to 35% of the sub-fund's assets will be invested in equities, equity funds, certificates on equities or equity indices and equity warrants. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element

is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/balanced-funds/LU1935133790/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Multi Asset Dynamic

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	75% MSCI AC World Index in EUR, Net Return; 25% BBG Barc Global Aggregate Index in EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Multi Asset Dynamic, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Dynamic is to achieve the highest possible capital appreciation.

The sub-fund invests variably worldwide in fixed and floating rate securities issued by governments or companies and in equities. Moreover, the net assets can be invested in share certificates, convertible debentures and warrant-linked bonds or in participation and dividend-right certificates.

The sub-fund's investments in asset-backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavour-

able market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest more than 10% of its assets in units or shares of other UCITS or other UCIs in order to be eligible for investment by UCITS governed by the UCITS Directive.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the

company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Multi Asset Dynamic

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund invests variably worldwide in fixed and floating rate securities issued by governments or companies and in equities. Moreover, the net assets can be invested in share certificates, convertible debentures and warrant-linked bonds or in participation and dividend-right certificates. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• DWS Use of Proceeds Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (**#1 Aligned with E/S characteristics**). Within this category, at least 20% of the sub-fund's assets qualify as sustainable investments (**#1A Sustainable**). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2%.

Up to 49% of the investments are not aligned with these characteristics (**#2 Other**). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Multi Asset Income

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI AC World Index (55%), Barclays U.S. High Yield 2% Issuer Cap Index hedged in EUR (35%), JP Morgan GBI EM Global Composite (10%)
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LD, ND, LC, NC, FC, PFD, TFD, LDH (P)	EUR

Launch date	LD, ND LC, NC, FC PFD TFD LDH (P)	June 4, 2014 March 16, 2015 January 19, 2016 December 5, 2017 March 15, 2018

Overview of the share classes (continued)

Dilution adjustment (payable by the shareholder)**

PFD:
A dilution adjustment of up to 3% based on the gross redemption amount may be charged.
Please see the general section for further explanation.

Placement fee (payable from the sub-fund's assets)

PFD:
Up to 3% for the benefit of the distributor. Please see the general section for further explanation.

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Multi Asset Income, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Income is to achieve a positive mid- to long-term investment performance taking in account the opportunities and risks of the international capital markets. The sub-fund generally has an investment focus on income-oriented assets such as interest-bearing securities and equities

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund may invest in interest-bearing securities, in equities, in certificates on, for example, equities, bonds, indices, commodities and precious metals, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in equity warrants, in participation and dividend-right certificates, in investment funds, such as equity, bond and money market funds, in investment funds that reflect the performance of an index, in derivatives as well as in money market instruments, deposits and cash.

Up to 75% of the sub-fund's assets will be invested in interest-bearing securities, convertible bonds, bond funds, certificates on bonds or bond indices and warrant-linked bonds.

Up to 65% of the sub-fund's assets will be invested in equities, equity funds, certificates on equities or equity indices and equity warrants.

The sub-fund's investments in asset-backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

Up to 10% of the sub-fund's assets may be invested in investment funds.

Up to 10% of the sub-fund's assets may be invested in certificates on commodities, commodities indices, precious metals and precious metals indices, as well as in funds. According to article 2 A. (j), investment in the certificates listed here is only permitted if they are 1:1 certificates qualifying as transferable securities. When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008. The sub-fund does not invest into futures on soft commodities, e.g. cotton, sugar, rice and wheat as well as all manner of livestock.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social

characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental

changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers’ rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business

activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment..

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental,

social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The described investment policy may also be implemented by using Synthetic Dynamic Underlyings (SDU).

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (mixed fund) at least 25% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into

account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional amounts of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 30%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 60%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Multi Asset Income

Legal entity identifier: 549300O5WKUNONTPTH35

ISIN: LU1054320970

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Emissions to water (no. 8);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund invests up to 75% of the sub-fund's assets in interest-bearing securities, convertible bonds, bond funds, certificates on bonds or bond indices and warrant-linked bonds. Up to 65% of the sub-fund's assets will be invested in equities, equity funds, certificates on equities or equity indices and equity warrants. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• DWS Use of Proceeds Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/balanced-funds/LU1054320970/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG NextGen Consumer

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI All Countries World TR net Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, TFC, TFD, XC, XD	EUR
Front-end load (payable by the investor)	FC, FD, TFC, TFD, XC, XD LC, LD	0% up to 5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD, TFC, TFD LC, LD XC, XD	up to 0.75% up to 1.5% up to 0.35%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, LC, LD, TFC, TFD, XC, XD	0%

Launch date	FC, FD, LC, LD, TFC, TFD, XC, XD	November 30, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG NextGen Consumer, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The main investment objective of the sub-fund DWS Invest ESG NextGen Consumer is to achieve a long-term sustained capital appreciation in Euros.

The sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

At least 70% of the sub-fund's total assets are invested in equities of companies, which benefit from a shift in consumption patterns driven by millennials and subsequent (next) generations. Generation shifts are occurring at a fast pace and the world will soon experience the rise of Generation Z (born between 1995 and 2009), which represents the largest consumer base through to 2030. Generation Z will shape the ways businesses create and market their products tomorrow. Brands that can accomplish Gen Z's expectations for authenticity, technology and social equality will capitalize on this growingly influential consumer segment. The sub-fund focuses on affected sectors like food, luxury, consumer goods, financials & financial services, IT, Communication services, mobility, energy, healthcare, education.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008 and article 41 (1) of the Law of 2010. In case that a derivative is embedded into the depository receipt, such derivative complies with the provisions as set out in article 41 (1) of the Law of 2010 and articles 2 and 10 of the Grand-Ducal Regulation of February 8, 2008.

A total of up to 30% of the sub-fund's assets (after deduction of liquid assets) may be invested in

- a) equities and/or securities similar to equities issued by companies worldwide that do not meet the requirements as mentioned above.
- b) interest-bearing securities, as well as convertible bonds and warrant-linked bonds issued by companies in the global infrastructure sector or by issuers in accordance with (a) above and which are denominated in any freely convertible currency.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund will not invest in ABS or MBS securities.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations

Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via,

e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

In compliance with article 2 of the general section of the Sales Prospectus, the investment policy can also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forward contracts, futures contracts on financial instruments and options on such contracts, as well as privately negotiated swap contracts on any type of financial instrument.

In particular, derivatives based on equities, bonds, currencies or recognized financial indices may also be acquired.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or

(b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG NextGen Consumer

Legal entity identifier: 254900W6KZ5CEGOVP716

ISIN: LU2400048364

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's total assets are invested in equities of companies, which benefit from a shift in consumption patterns driven by millennials and subsequent (next) generations. The sub-fund focuses on affected sectors like food, luxury, consumer goods, financials & financial services, IT, communication services, mobility, energy, healthcare, education.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as

well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2400048364/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Next Generation Infrastructure

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager RREEF America LLC, 222 S. Riverside Plaza, Floor 24, Chicago, IL 60606, United States of America
Performance benchmark	–
Reference portfolio (risk benchmark)	70% MSCI World Infrastructure Index; 30% FTSE EPRA/NAREIT Developed Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, TFC, TFD, XC, XD, NC, PFC USD XC, USD XD	EUR USD
Front-end load (payable by the investor)	FC, FD, TFC, TFD, USD XC, USD XD, XC, XD, PFC LC, LD NC	0% up to 5% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD, TFC, TFD LC, LD USD XC, USD XD, XC, XD NC PFC	up to 0.75% up to 1.5% up to 0.375% up to 2% up to 1.6%

Launch date	FC, FD, LC, LD, TFC, TFD, USD XC, USD XD, XC, XD NC, PFC	May 15, 2020 January 29, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Next Generation Infrastructure, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The main investment objective of the sub-fund DWS Invest ESG Next Generation Infrastructure is to achieve a long-term sustained capital appreciation in Euros.

The sub-fund invests in those segments of infrastructure that have undergone meaningful changes, forming a new generation of tangible assets. These next generation assets are closely tied to structural growth trends, such as digitalisation and decarbonisation, and will significantly impact and determine our everyday lives in the near future. The sub-fund is centered around changes in consumption patterns and the demand for "intelligent" and likewise sustainable solutions based on technological progress, e.g. needed for smart cities, smart homes, and smart buildings. The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund invests primarily in the equities of listed companies that own, develop or manage infrastructure and real estate, provided that the latter equities are considered to be transferable securities as defined by article 41 (1) of the Law of 2010, as well as in equities. The sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

At least 70% of the sub-fund's total assets are invested in:

- a) equities, other equity securities and uncertificated equity instruments of issuers of selected infrastructure segments,
- b) equities of real estate companies, real estate investment companies including closed ended real estate investment trusts (REITs) of any legal form from selected real estate segments,
- c) securities similar to equities, such as participation and dividend-right certificates of companies according to b) above,

- d) derivative financial instruments whose underlying instruments directly or indirectly (i.e., via equity indices) constitute investments according to a) and b).

Selected infrastructure segments include

- Data management (mobile towers, fibre assets, data center)
- Smart Mobility (toll roads)
- Smart Grid (power and water infrastructure)
- Renewables (offshore wind parks, renewables natural gas)

Selected real estate segments include

- E-Commerce Real Estate (logistics facilities, warehouses)
- Social Infrastructure (medical research and development facilities)

Where liquid assets cover obligations arising from derivative financial instruments according to (d) above, such liquid assets are attributed to the relevant 70%. Investments according to (b) and (c) herein must not include open-ended real estate investment funds deemed to be collective investment undertakings under Luxembourg law.

Infrastructure companies according to (a) provide an essential product or service to a segment of the population at a given time and cost, and often retain these characteristics for an extended period of time. The strategic competitive advantage of infrastructure assets is often protected by high barriers to entry of alternative suppliers. These high barriers to entry can take various forms, including:

- requirements imposed by legislation and/or regulation;
- natural barriers like planning or environmental restrictions, or availability of land;
- high costs of new development, such as the cost to build roads;
- long-term exclusive concessions and customer contracts;
- efficiencies provided by economies of scale such as reductions in marketing or other services.

These high barriers to entry have the effect of protecting the cash flows generated by these infrastructure assets, because services provided such as parking, roads, and communications towers can generally only be delivered by relatively large and costly physical assets in close proximity to customers. This is a critical distinction between infrastructure and other industries.

A total of up to 30% of the sub-fund's assets (after deduction of liquid assets) may be invested in

- a) equities and/or securities similar to equities issued by companies worldwide that do not meet the requirements of a), b) and c) above;
- b) interest-bearing securities, as well as convertible bonds and warrant-linked bonds issued by companies in the global infrastructure

sector or by issuers in accordance with b) above and which are denominated in any freely convertible currency.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund will not invest in ABS or MBS securities.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "E") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "F") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed

by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 30% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion

strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

In compliance with article 2 of the general section of the Sales Prospectus, the investment policy can also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forward contracts, futures contracts on financial instruments and options on such contracts, as well as privately negotiated swap contracts on any type of financial instrument.

In particular, derivatives based on equities, bonds, currencies or recognized financial indices may also be acquired.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Specific risks

The sub-fund's performance will largely be determined by the following factors, which give rise to both upside and downside potential:

- the performance of international equity markets;
- company and sector specific developments;
- exchange-rate movements of non-euro currencies against the euro.

The sub-fund may focus its investments on different sub-sectors, countries and market segments for a certain time period on a variable basis. In addition, the sub-fund could use derivatives. These investments could also lead to further performance and risks.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Next Generation Infrastructure

Legal entity identifier: 254900DJJZ72SAHA1E19

ISIN: LU2162004548

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund primarily in the equities of listed companies that own, develop or manage real estate, provided that these equities are considered to be transferable securities as defined by Article 41 (1) of the Law of 2010, as well as in equities and other instruments of issuers of the "Global Infrastructure" sector. The sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. At least 70% of the sub-fund's total assets are invested in: equities of real estate companies, real estate investment companies including closed ended real estate investment trusts (REITs) of any legal form, securities similar to equities, such as participation and dividend-right certificates, derivative financial instruments like equity indices, and other equity securities and uncertificated equity instruments of issuers of the "Global Infrastructure" sector.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible

according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment. For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment. Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons. Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG

assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 30% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

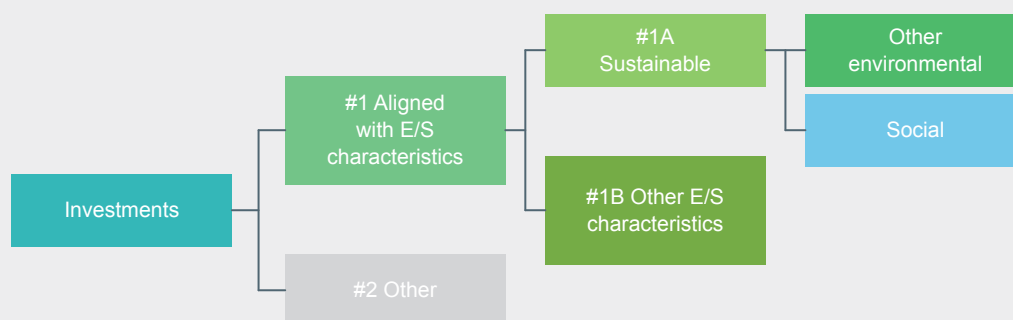

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2162004548/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Qi LowVol World

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS International GmbH, Mainzer Landstr. 11-17, 60329 Frankfurt/Main, Germany
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI World TR Net (MSDEWIN Index)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg, Frankfurt/Main and Cologne
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Qi LowVol World, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Qi LowVol World is to achieve a sustainable capital appreciation.

The sub-fund is actively managed and is not managed in reference to a benchmark.

"Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Investment decisions are the result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

At least 60% of the sub-fund's assets are invested globally in equities. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market.

Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities in this respect.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 40% of the sub-fund's net assets.

In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 40% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and

principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by

means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly

specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market. "Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. At least 60% of the sub-fund's assets are invested globally in equities. Up to 40% of the assets of the sub-fund may be invested in money market instruments, term deposits and cash respectively.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1230072479/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Qi US Equity

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS International GmbH, Mainzer Landstr. 11–17, 60329 Frankfurt/Main, Germany
Performance benchmark	MSCI USA TR net, administered by MSCI Limited.
Reference portfolio (risk benchmark)	MSCI USA TR net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg, Frankfurt/Main and Cologne that is also an exchange trading day on New York Stock Exchange
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	USD IC, USD RC	USD
Front-end load (payable by the investor)	USD IC, USD RC	0%
Management Company Fee p.a. (payable by the sub-fund)*	USD IC USD RC	up to 0.2% up to 0.5%
Service Fee p.a. (payable by the sub-fund)*	USD IC, USD RC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	USD IC, USD RC	0.01% 0.05%
Launch date	USD IC, USD RC	April 30, 2019

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Qi US Equity, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures

in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Qi US Equity is to achieve a long-term capital appreciation in excess of its benchmark.

The sub-fund acquires and sells the assets in accordance with its assessment of economic and capital-market conditions and of future prospects on the exchanges.

At least 75% of the sub-fund's assets are invested in U.S. equities.

Individual stocks are picked primarily according to the criteria of fundamental analysis; their

weightings take into account a balance between opportunity and risk. The sub-fund will acquire only such assets that in combination can be expected to generate income and/or growth or are expected to improve the risk profile of the overall portfolio. In these investments, the sub-fund manager takes care to ensure a flexible weighting of the investment focuses.

The stock selection is based on a proprietary quantitative investment approach managed by our Quantitative investments (Qi) group. Investment decisions are the result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

Taking into account the investment limits set out in article 2 B. (n), the investment policy can also be implemented through the use of derivatives, including, but not limited to, forwards, futures, single-stock futures, options or equity swaps.

Positions may also be established which anticipate declines in equities or indices.

In accordance with article 2 F. of the general section of the Sales Prospectus, no short sales of securities will be undertaken. Short positions are achieved by using securitized and non-securitized derivative instruments.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social

characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined,

the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German

Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are expected to be components of the benchmark and the portfolio is expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate to a limited extent (e.g., by a positioning outside of the benchmark as well as underweighting or overweighting) and the actual degree of freedom is typically relatively low. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus, the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Qi US Equity

Legal entity identifier: 549300FYU2V74OOKSB71

ISIN: LU1978535810

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund will acquire only such assets that in combination can be expected to generate income and/or growth or are expected to improve the risk profile of the overall portfolio. "Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. At least 75% of the sub-fund's assets are invested in U.S. equities. Up to 25% of the assets of the sub-fund may be invested in money market instruments, term deposits and cash respectively.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• DWS Use of Proceeds Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

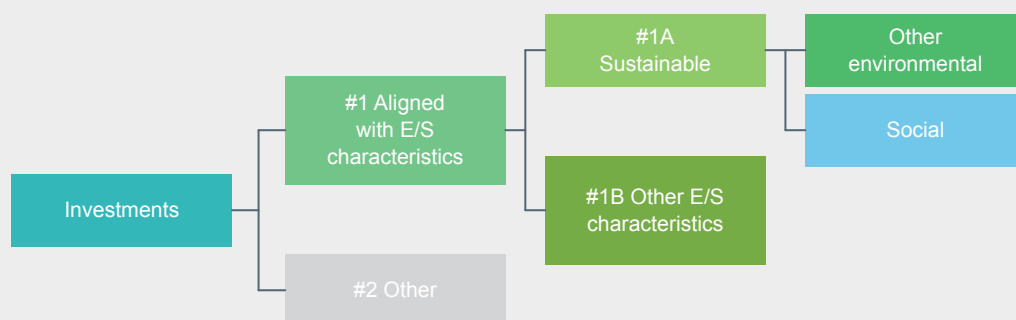

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1978535810/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Real Assets

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager RREEF America LLC, 222 S. Riverside Plaza, Floor 34, Chicago, IL 60606, United States of America
Performance benchmark	–
Reference portfolio (risk benchmark)	27.5% DJ Brookfield, 27.5% FTSE EPRA NAREIT, 25% BBG Global Inflation Linked, 20% S&P Global Natural Ressources
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Real Assets, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Real Assets is to achieve positive long-term capital appreciation through investing globally in publicly traded real assets.

The sub-fund is actively managed and is not managed in reference to a benchmark.

Real assets are a collective term for listed real estate, listed infrastructure companies, global natural resource equities as well as certificates on commodities and commodities indices. Global natural resources refers to companies whose revenues or earnings, as reported in the most recent annual report, must be generated primarily from activities in the commodities sector. This includes the global exploration, development, refinement, production and marketing of commodities and their by-products.

The sub-fund may not directly invest in commodities or real estate.

The sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates, government issued fixed income securities, exchange traded funds and units of other investment undertakings. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices.

At least 70% of the sub-fund's assets are invested in publicly traded real assets. In detail:

- a) issuers that own, develop or manage real estate, provided that these securities are considered to be transferable securities as defined by article 41 (1) of the Law of 2010;
- b) issuers of the infrastructure sector including transportation, communication, utilities, industrials and energy;
- c) precious metals commodity-related financial derivative instruments and in equities of companies active in the commodities sector including agriculture, energy, industrial metals, livestock and materials;
- d) Treasury Inflation-Protected Securities (TIPS) and other fixed income securities.

Up to 30% of the sub-fund's assets may be invested in equities, interest-bearing securities, convertible bonds, warrant-linked bonds and equity warrants that do not satisfy the requirements of a), b), c) and d).

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may be implemented partially through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, futures, options, forwards, and privately negotiated swap contracts on any type of financial instrument whose underlyings consist of securities covered by article 41(1) of the Law of 2010, financial indices, interest rates, foreign exchange rates or currencies. The sub-fund's assets may also be invested in certificates on commodities and commodities indices. According to article 2 A. (j), investment in the certificates listed here is only permitted if they are 1:1 certificates qualifying as transferable securities.

When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's

future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse

score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country’s governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will

invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Dele-

gated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund will not engage in short selling of any transferrable securities.

The sub-fund may not enter into any obligations regarding the transfer of physical commodities.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus at least 25% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in such equity capital investments as defined in article 2 (8) of the German Investment Tax Act that may be acquired for the sub-fund in accordance with the Articles of Incorporation and this Sales Prospectus (mixed fund).

Equity capital investments in this respect are

- equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:
 - i) units of investment funds;
 - ii) units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
 - iii) units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
 - iv) units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
 - v) units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

- units of investment funds, which in accordance with their terms and conditions of investment invest more than 50% of their value or more than 50% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 51% of their value; if the terms and conditions of an equity fund make provisions for a percentage higher than 51% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds, which in accordance with their terms and conditions of investment invest at least 25% of their value or at least 25% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 25% of their value; if the terms and conditions of a balanced fund make provisions for a percentage higher than 25% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds that carry out a valuation at least once per week in the amount of the percentage of their assets published on each valuation date that they actually invest themselves, or as a fund of fund, in units of corporations.

Units of corporations as defined in indents 2 through 4 are

- units of corporations admitted to official trading on a stock exchange or admitted to, or included in, another organized market;
- units of corporations that are not real estate companies and that are domiciled in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area and are subject there to corporate income tax and are not exempt from it;
- units of corporations that are not real estate companies and that are domiciled in a third country and are subject there to corporate income tax of at least 15% and are not exempt from it; and
- units of other investment funds, which in turn meet the requirements of indents 2 through 4 and of this sentence, in the respective amount specified there.

However, units of corporations are not those that correspond to the categories as defined in indent 1 (i) to (v) above or are held indirectly via partnerships.

Equity capital investments indirectly held by the sub-fund via partnerships are not equity capital investments.

Individual investment fund units may only be taken into consideration once for the purposes of determining the daily equity capital investment rate.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives („risk benchmark“).

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Real Assets

Legal entity identifier: 254900ZJ69459KC0QB26

ISIN: LU2548824452

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates, government issued fixed income securities, exchange traded funds and units of other investment undertakings. At least 70% of the sub-fund's assets are invested in publicly traded real assets. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as

well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/balanced-funds/LU2548824452/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Real Assets Balanced

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	60% MSCI World TRN Index + 30% BBG Global Aggregate Bond Index + 10% Gold Bullion Spot Price
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Real Assets Balanced, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Real Assets Balanced is to achieve sustainable capital growth through investing globally in publicly traded real assets.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The portfolio manager uses a balanced concept for the asset allocation containing equity, fixed income and commodity instruments. Depending on the evaluation of the market situation, the portfolio manager will weight such asset classes in the portfolio of the sub-fund.

Real assets are a collective term and include among others listed real estate, investment trusts, listed infrastructure companies, materials companies, convertibles as well as certificates on commodities and commodities indices.

Listed Real Estate does not only refer to REITS but also all equities that are classified as real estate as per Global Industry Classification Standard (GICS) or Bloomberg Industry Classification System (BICS).

An investment trust is a type of fund typically set up as a closed-ended listed company (Investment Trust). As such its shares can't be redeemed and will be traded on a stock exchange. Investment trusts include but are not limited to equities of real asset companies, real asset investment

companies including closed real estate investment trusts (REITs) of any legal form.

The Global Industry Classification Standard (GICS) is a hierarchical industry classification system developed by MSCI and Standard & Poor's. GICS consists of 11 sectors, 24 industry groups, 69 industries and 158 sub-industries. Each company is assigned a single GICS classification at the sub-industry level according to its principal business activity.

The Bloomberg Industry Classification Systems (BICS), an industry classification system developed and maintained by Bloomberg independent of the index business that classifies securities based on business, economic function, and other characteristics. The sub-fund may not directly invest in commodities or real estate.

The sub-fund may acquire equities, interest-bearing securities, convertibles, derivatives, investment trusts, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates, fixed

income securities, exchange traded funds and units of other investment undertakings and certificates on commodity indices. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices.

At least 70% of the sub-fund's assets are invested in publicly traded real assets. In detail:

- a) Companies which belong to the Real Estate Sector or Asset Management Industry according to a recognized classification system like GICS and BICS
- b) Infrastructure companies, which include the utilities, industrials, energy (including renewables) and communications sector according to a recognized classification system like GICS and BICS
- c) Companies which belong to the material sector including, metals & mining, agricultural and paper & forest companies or Packaged Foods & Meats Industry according to a recognized classification system like GICS and BICS
- d) Investment Trusts
- e) Exchange traded funds and units of other investment undertakings with a focus on: real assets and the topics described in a) to d),
- f) Certificates on commodity indices
- g) Treasury Inflation-Protected Securities (TIPS), Floating Rate Notes, convertibles and fixed income securities including issuers named in a) to c)

Up to 30% of the sub-fund's assets may be invested among others in equities, interest-bearing securities, warrant-linked bonds, equity warrants, exchange traded funds and units of other investment undertakings and cash that do not satisfy the requirements of a) to g)

Furthermore, the sub-fund also intends from time to time to establish an exposure of up to 25% of the sub-fund's assets to the international precious metals and commodity (ex agriculture) markets. However, this limit can be utilized by establishing an exposure to one single precious metal or commodity. For this purpose and within this 25% limit, the sub-fund may acquire derivative financial instruments whose underlying instruments are precious metals or commodities indices and sub-indices in accordance with the 2008 Regulation, as well as ETFs and 1:1 certificates (including Exchange Traded Commodities (ETCs)) the underlying of which are single precious metals or commodities and that meet the requirements of transferable securities as determined in article 2 A. (j) of the general section of the Sales Prospectus.

The sub-fund does not invest into futures on soft commodities, e.g. cotton, sugar, rice and wheat as well as all manner of livestock.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may be implemented partially through the use of suitable derivative financial instruments. These derivative

financial instruments may be acquired for hedging and investment purposes and may include, among others, futures, options, forwards, and privately negotiated swap contracts on any type of financial instrument whose underlyings consist of securities covered by article 41(1) of the Law of 2010, financial indices, interest rates, foreign exchange rates or currencies. The sub-fund's assets may also be invested in certificates on commodities and commodities indices. According to article 2 A. (j), investment in the certificates listed here is only permitted if they are 1:1 certificates qualifying as transferable securities.

When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further

detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance

from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);

- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund will not engage in short selling of any transferrable securities.

The sub-fund may not enter into any obligations regarding the transfer of physical commodities.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (mixed fund) at least 25% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock

exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives („risk benchmark“).

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Real Assets Balanced

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may acquire equities, interest-bearing securities, convertibles, derivatives, investment trusts, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates, fixed income securities, exchange traded funds and units of other investment undertakings and certificates on commodity indices. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. At least 70% of the sub-fund's assets are invested in publicly traded real assets. Up to 25% of the sub-fund's assets are invested in the international precious metals and commodity (ex agriculture) markets.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element

is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Smart Industrial Technologies

Investor profile	Risk-tolerant
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	MSCI World Industrial Net TR Index, administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI World Industrial Net TR Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, LC, LD, NC, TFC, PFC USD TFCH	EUR USD
Front-end load (payable by the investor)	FC, TFC, USD TFCH, PFC LC, LD NC	0% up to 5% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FC, TFC, USD TFCH LC, LD NC PFC	up to 0.75% up to 1.5% up to 2% up to 1.6%
Service Fee p.a. (payable by the sub-fund)*	FC, LC, LD, NC, TFC, USD TFCH, PFC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, LC, LD, NC, TFC, USD TFCH, PFC	0.05%
Launch date	FC, LC, LD NC TFC USD TFCH PFC	November 2, 2018 December 14, 2018 May 15, 2019 September 16, 2019 April 28, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest ESG Smart Industrial Technologies the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Smart Industrial Technologies is to achieve the highest possible return, in combination with a reasonable annual distribution of income.

The sub-fund invests into future technologies of various sectors in a smart fashion, as it focuses on companies that are able to extend technological and thought leadership in industrial production. Core areas as "automation & robotics", "digitalisation" or "infrastructure" offer smart business solutions while in parallel offering different growth drivers and diversification benefits.

As part of its discretionary management policy for the sub-fund, the Investment Company engages in active selection of the assets permitted under the UCITS law and the permissible assets specified in article 2 of the general part of the Sales Prospectus. Decisions on asset selection are based on well-founded evaluations by the globally networked investment specialists of the fund management.

At least two-thirds of the sub-fund's assets must be invested in equities of German and foreign issuers. In doing so, investments must be made in equities that are active in the areas of provision of forward-looking infrastructure and the production of future-oriented industrial goods and that derive at least 20% of their revenues in these areas.

Up to one third of the sub-fund's assets may be invested in money market instruments and deposits with credit institutions, respectively. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this one third limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The Company may invest up to 10% of the sub-fund's assets in units of other funds (investment fund units). The proportion of such investment fund units in excess of 5% of the sub-fund's assets may consist only of money market fund units.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations

Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 7% of the sub-fund's net assets in environmentally sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 1: Zero hunger
- Goal 2: Clean water and Sanitation
- Goal 3: Affordable and clean energy
- Goal 4: Sustainable cities and communities
- Goal 5: Responsible consumption & production
- Goal 6: Climate action
- Goal 7: Life below water
- Goal 8: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as environmentally sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is environmentally sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered environmentally sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting

from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least two thirds of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Smart Industrial Technologies
Legal entity identifier: 5493004OG6D9KT3Z2K15
ISIN: LU1891278043

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 7% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of environmentally sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 2: Zero hunger
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as environmentally sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is environmentally sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered environmentally sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least two-thirds of the sub-fund's assets must be invested in equities of German and foreign issuers. In doing so, investments must be made in equities that are active in the areas of provision of forward-looking infrastructure and the production of future-oriented industrial goods and that derive at least 20% of their revenues in these areas. Up to one third of the sub-fund's assets may be invested in money market instruments and bank balances, respectively.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• DWS Use of Proceeds Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (**#1 Aligned with E/S characteristics**). Within this category, at least 7% of the sub-fund's assets qualify as sustainable investments (**#1A Sustainable**). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU Taxonomy is 7%.

Up to 49% of the investments are not aligned with these characteristics (**#2 Other**). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 7%.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1891278043/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG Top Euroland

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Euro Stoxx 50, administered by STOXX Ltd.
Reference portfolio (risk benchmark)	Euro Stoxx 50
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes (continued)

Dilution adjustment (payable by the shareholder)**

PFC:
A dilution adjustment of up to 3% based on the gross redemption amount may be charged.
Please see the general section for further explanation.

Placement fee (payable from the sub-fund's assets)

PFC:
Up to 3% for the benefit of the distributor. Please see the general section for further explanation.

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Top Euroland, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Top Euroland is to achieve an above average return. At least 75% of the sub-fund's assets are invested in equities of issuers having their headquarters in a member state of the European Economic and Monetary Union (EMU).

The sub-fund focuses on companies with a higher market capitalization. Additionally, the fund-manager aims to run a concentrated portfolio, e.g. 40–60 different stocks. Depending on the market situation it is possible to deviate from the mentioned diversification target.

A maximum of 25% of the sub-fund's assets may be invested in equities of issuers that do not meet the above-mentioned criteria.

Up to 25% of the sub-fund's assets may be invested in short-term deposits, money market instruments and deposits with credit institutions and up to 10% in money market funds. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives,

the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an

issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined,

the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

PEA-compatibility

The sub-fund is eligible to the PEA (Plan d'Épargne en Actions), a fiscal advantage for French subscribers.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed

expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Top Euroland

Legal entity identifier: 549300IHXXEJW2LCJN56

ISIN: LU0145644893

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 75% of the sub-fund's assets are invested in equities of issuers having their headquarters in a member state of the European Economic and Monetary Union (EMU). The sub-fund focuses on companies with a higher market capitalization. Additionally, the fund-manager aims to run a concentrated portfolio, e.g. 40–60 different stocks. Depending on the market situation it is possible to deviate from the mentioned diversification target. Up to 25% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of “F”) are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the

selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

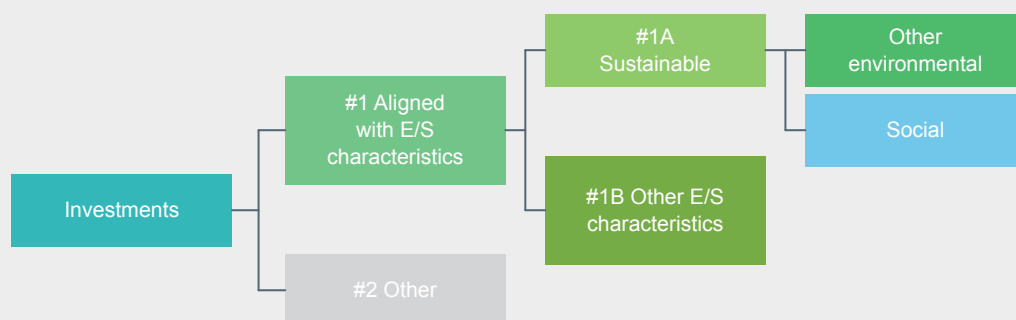

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0145644893/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest ESG USD Short Duration

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investment Management Americas Inc., 345 Park Avenue, New York, NY 10154, United States of America
Performance benchmark	Bloomberg Barclays US Government/Credit 1-3 years Index, administered by Barclays Bank Plc.
Reference portfolio (risk benchmark)	– (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG USD Short Duration, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG USD Short Duration is to generate an above-average return for the sub-fund.

At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities classified as short-term. "Short term" relates to a term to maturity or fixed-rate term of investments ranging between zero and three years. Furthermore, the sub-fund may invest into money market instruments, deposits with credit institutions and up to 10% in money market funds.

At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months.

This sub-fund does not comply with the provisions of the EU Regulation 2017/1131 on money market funds and hence will not qualify as a money market fund.

A maximum of 30% of the sub-fund's total assets may be invested in debt instruments or other securities that do not meet the above criteria.

The sub-fund's assets shall be invested in USD denominated bonds, in credit bonds (maximum 80%) and in US Treasuries (maximum 80%). Credit bonds refer to government related bonds (Agency, Local Authority, Supranationals and Sovereign) and corporate bonds (Industrial, Utility, Financial Institutions).

The sub-fund's assets may be invested in interest-bearing debt securities that do not meet the above-mentioned criteria, including but not limited to a max of 40% securitized bonds of sub-fund's assets. Securitised bonds include ABS, MBS, CLOs, and Covered Bonds. Investments in ABS / MBS / CLOs / Covered bonds need to have an investment-grade rating. The sub-fund's

investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

A maximum of 20% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. In case of split rating between three agencies, the higher rating of the two best ratings should be applicable. In case of split rating between two agencies, the higher rating should be applicable. In the case of no rating, an internal rating may be applied. When a holding asset is downgraded to lower than B3/B-, such asset will be sold within 6 months.

The sub-fund must invest more than 80% of the net assets in USD denominated assets. Other net assets must be hedged to the US dollar.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribu-

tion of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14); and
- Investee countries subject to social violations (no 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal

adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund’s assets may be invested in all other permissible assets.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section “Integration of sustainability risks in the investment process”.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund’s securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the

benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG USD Short Duration

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10);
- Exposure to controversial weapons (no. 14); and
- Investee countries subject to social violations (no. 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets shall be invested in USD denominated bonds, in credit bonds (maximum 80%) and in US Treasuries (maximum 80%). At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities ranging between zero and three years. At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months. A maximum of 20% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. The investment into securitized bonds is limited to a maximum of 40% of sub-fund's assets. The sub-fund's investments in contingent convertibles shall be limited to 10% and the investments in asset backed securities and mortgage backed securities shall be limited to 20% of the subfund's net asset value. The sub-fund must invest more than 80% of the net assets in USD denominated assets. Other net assets must be hedged to the US dollar.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the

highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

- **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest ESG Women for Women

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI AC World Index (Total return net)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, TFC, TFD, XC, XD	EUR

Launch date	FC, FD, LC, LD, TFC, TFD, XC, XD	January 17, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest ESG Women for Women, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While

the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest ESG Women for Women is to achieve an above average appreciation of capital in Euros.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund may acquire equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants.

The sub-fund has as its objective to create a positive social impact by investing in companies with a strong focus on diversity and equality combined with sustainable business practices, while at the same time aiming to provide long term capital growth. The sub-fund is managed by female portfolio managers who will analyse the

market from their female perspective. Gender is a substantial part of the diversity evaluation as women account for the half of the world population, but e.g. women are still under-represented in executive roles and in boards of the most listed companies.

The sub-fund does not only cover (gender) diversity topics but is building a scoring model that also covers general social topics. The sub-fund is investing into companies with a strong momentum and improvement in driving the general diversity within the company (Rate of Change) and companies which are already diversity leaders within their industries (Best in Class). The companies should furthermore provide a sustainable business model, strong fundamentals and long-term structural growth.

Diversity leaders (Best In Class and Rate of Change) are companies that consciously recognize and promote diversity across all employee levels by providing equal opportunities for all employees regardless their age, culture, ethical background, religion, sex/gender and color.

The sub-fund integrates ESG (i.e. Environmental, Social and corporate Governance) characteristics in the investment process strategy. The sub-fund will take exposure of at least two-thirds of its total assets to equities of companies all over the world, which includes companies incorporated or having the major part of their business activities in mature economies (developed markets) as well as in developing economies (emerging markets) and exhibiting a high degree of diversity and equality based on Best in Class or Rate of Change.

At least 75% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies.

Up to 25% of the sub-fund's assets may be invested in short-term deposits, money market instruments and deposits with credit institutions and up to 10% in money market funds.

In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008, and article 41 (1) of the Law of 2010. In case that a derivative is embedded into the depository

receipt, such derivative complies with the provisions as set out in article 41 (1) of the Law of 2010 and articles 2 and 10 of the Grand-Ducal Regulation of February 8, 2008.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclu-

sion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Social Commitment Assessment

In addition, the sub-fund management seeks to attain the promoted social characteristics in relation to diversity and equality by focusing on the DWS Social Commitment Assessment of a company. The DWS Social Commitment Assessment considers the percentage of women in executive roles, flexible workplace environment, dependent care, the existence of a non-discrimination policy and compliance with UN SDG 5. UN SDG 5 aims to achieve gender equality and empower all women and girls. Metrics incorporated into the factor along others are programs

for workforce diversity, percentage of women on board of directors, controversies in labour or customer relation towards gender discrimination or harassment, child or forced labour or labour discrimination including supply chain, customer discrimination on the basis of disabilities.

Issuers with a low social commitment (i.e. a letter score of “E” or “F”) are excluded as an investment. Further, issuers with a letter score of “D” in the DWS Social Commitment Assessment are limited to 15% of the sub-fund’s net assets.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund’s net assets in socially sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Reduced inequality
- Goal 9: Sustainable cities and communities

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as socially sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is socially sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered socially sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU

Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10);
- Board gender diversity (no. 13) and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Women for Women

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

Moreover, this sub-fund promotes social characteristics related to diversity and equality by investing in companies with a strong momentum and improvement in driving the general diversity (including gender) within the company and companies which are already diversity leaders within their industries.

This sub-fund further promotes a minimum proportion of socially sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer groups
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **DWS Social Commitment Assessment** is used as indicator to measure the issuer's commitment to diversity and equality
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as socially sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is socially sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered socially sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Emissions to water (no. 8);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10);
 - Board gender diversity (no. 13); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund invests in companies with a strong focus on diversity and equality combined with sustainable business practices. At least 75% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. Up to 25% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores.

The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F")

are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Social Commitment Assessment**

In addition, the sub-fund management seeks to attain the promoted social characteristics in relation to diversity and equality by focusing on the Social Commitment Assessment of a company. The DWS Social Commitment Assessment considers the percentage of women in executive roles, flexible workplace environment, dependent care, the existence of a non-discrimination policy and compliance with UN SDG 5. UN SDG 5 aims to achieve gender equality and empower all women and girls. Metrics incorporated into the factor along others are programs for workforce diversity, percentage of women on board of directors, controversies in labour or customer relation towards gender discrimination or harassment, child or forced labour or labour discrimination including supply chain, customer discrimination on the basis of disabilities.

Issuers with a low social commitment (i.e. a letter score of "E" or "F") are excluded as an investment. Further, issuers with a letter score of "D" in the DWS Social Commitment Assessment are limited to 15% of the sub-fund's net assets.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or

several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of socially sustainable investments is 15%.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective that are not aligned with the EU Taxonomy is 15%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2420982006/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Euro Corporate Bonds

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	iBoxx EUR Corporates, administered by IHS Markit Benchmark Administration Limited
Reference portfolio (risk benchmark)	iBoxx EUR Corporates
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Dilution adjustment (payable by the shareholder)**	PFC and PFDQ: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC and PFDQ: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Euro Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Euro Corporate Bonds is to generate an above-average return for the sub-fund.

The majority of the sub-fund's securities or their issuers are expected to be components of the benchmark. The sub-fund management will use its discretion to invest in e.g. securities, sectors, ratings that are not included in the benchmark in order to take advantage of specific investment opportunities. The strategy offers investors access to the EUR Corporate Bond market. In regard to the benchmark the sub-fund positioning can deviate substantially (e.g. by off-benchmark positioning or significant under- and overweights). Due to the before mentioned characteristic of the sub-fund strategy the deviation of the portfolio from the benchmark is typically relatively high. Despite the fact that the sub-fund aims to outperform the benchmark, the potential outperformance

might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

The sub-fund may acquire euro-denominated fixed and/or variable interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities and equity warrants. At least 70% of the sub-fund's assets are invested in corporate bonds denominated in Euros that offer returns higher than those of comparable government bonds; investments are deliberately focused almost exclusively on issuers whose credit standing is considered by the market to be relatively good but not first-rate (investment-grade bonds). The Investment Company will only purchase those securities for the sub-fund for which, after appropriate analysis, it can assume that the interest and repayment obligations will be fulfilled. Nevertheless, the risk of a total loss of the value of individual securities purchased for the sub-fund cannot be ruled out completely. In order to take account of the remaining risks, care shall be taken to spread investments among issuers.

A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition.

The sub-fund may also conclude credit default swaps. Their use need not be limited to hedging the fund's assets; they may also be part of the investment strategy.

No more than 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend-right certificates, equities and equity warrants.

The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may use, particularly in accordance with the investment limits stated in article 2 B. of the Sales Prospectus – general section, derivatives to optimize the investment objective.

The derivatives may only be used in compliance with the investment policy and the investment objective of DWS Invest Euro Corporate Bonds. The performance of the sub-fund is therefore besides other factors depending on the respec-

tive proportion of derivatives, e.g. swaps in the sub-fund's total assets.

To implement the investment policy and achieve the investment objective it is anticipated that the derivatives, such as swaps, will be entered with at least BBB3 (Moody's) /BBB- (S&P, Fitch) rated financial institutions specializing in such transactions. Such OTC-agreements are standardized agreements.

In conjunction with the OTC transactions, it is important to note the associated counterparty risk. The sub-fund's counterparty risk resulting from the use of portfolio total return swaps will be fully collateralized. The use of swaps may furthermore entail specific risks that are explained in the general risk warnings.

The sub-fund can be invested in total or in parts in one or several OTC-transactions negotiated with a counterparty under customary market conditions. Therefore, the sub-fund can be invested in total or in parts in one or several transactions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on

ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental,

social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund’s investments in contingent convertibles shall be limited to 10% of the sub-fund’s net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

Furthermore, the sub-fund may invest in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus, including the assets mentioned in article 2 A. (j).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section “Integration of sustainability risks in the investment process”.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund’s securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of

specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Specific risks

The sub-fund deliberately purchases the securities of issuers whose credit standing is considered by the market to be relatively good but not first rate (investment grade bonds). The opportunities resulting from the higher rates of interest in comparison to government bonds are thus countered by corresponding risks. Despite careful examination of the economic conditions and the financial condition and earnings capacity of issuers, the risk of a total loss of the value of individual securities purchased for the sub-fund cannot be ruled out completely.

The opportunities afforded by an investment of this type are therefore countered by significant risks.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Euro Corporate Bonds

Legal entity identifier: 5493006LOVYM1DRSZI25

ISIN: LU0300357554

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund may acquire euro-denominated fixed and/or variable interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities and equity warrants. At least 70% of the sub-fund's assets are invested in corporate bonds denominated in Euros that offer returns higher than those of comparable government bonds; investments are deliberately focused almost exclusively on issuers whose credit standing is considered by the market to be relatively good but not first-rate (investment-grade bonds). Up to 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend-right certificates, equities and equity warrants. The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value. The sub-fund may also conclude credit default swaps.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0300357554/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Euro High Yield Corporates

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Bank of America Merrill Lynch Euro BB-B Non-Financial Fixed & FRN HY Constrained, administered by Merrill Lynch International.
Reference portfolio (risk benchmark)	Bank of America Merrill Lynch Euro BB-B Non-Financial Fixed & FRN HY Constrained
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Euro High Yield Corporates, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Euro High Yield Corporates is to generate an above-average return for the sub-fund.

At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Non-investment grade encompasses BB+ and below rated bonds, including bonds with D rating and non-rated bonds. In case of a split rating

involving three rating agencies, the second best will prevail. If a security is rated by only two agencies, the lower of the two ratings will be used for the rating classification. If a security only has one rating, the single rating will be used. If there is no official rating, an internal rating will be applied in accordance with DWS internal guidelines.

Up to 30% of the sub-fund's assets may be invested in corporate bonds that do not meet the above-mentioned criteria.

The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund manager may also participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

In compliance with the investment limits specified in article 2 B. of the general section of

the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavour-

able market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations

Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU

Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

In extreme market situations, the Portfolio Manager may diverge from the above investment strategy to avoid a liquidity squeeze. Up to 100% of the sub-fund's assets may temporarily be invested in interest-bearing debt securities and money market instruments permissible under Directive 2009/65/EC of the European Parliament and of the Council of July 13, 2009, on the coordination of laws, regulations and administrative provisions relating to undertakings for collective investment in transferable securities (UCITS).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Euro High Yield Corporates

Legal entity identifier: 549300DAGSZP56TFTT76

ISIN: LU0616839501

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Non-investment grade encompasses BB+ and below rated bonds, including bonds with D rating and non-rated bonds. Currency risks versus the Euro in the portfolio shall be hedged. Up to 10% of the sub-fund's assets may be invested into listed or non-listed equities in the due course of a re-structuring of fixed income instruments. A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of

“E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0616839501/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Euro-Gov Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	iBoxx Sovereign Eurozone Overall, administered by IHS Markit Benchmark Administration Limited
Reference portfolio (risk benchmark)	iboxx Sovereign Eurozone
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, LD, NC, FC, IC, TFC, TFD, IC100, ID100, FC100	EUR
Front-end load (payable by the investor)	LC, LD NC FC, IC, TFC, TFD, IC100, ID100, FC100	up to 3% up to 1.5% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LC, LD NC FC, TFC, TFD IC IC100, ID100, FC100	up to 0.6% up to 1.1% up to 0.35% up to 0.3% up to 0.15%
Service Fee p.a. (payable by the sub-fund)*	LC, LD, FC, IC, TFC, TFD, IC100, ID100, FC100 NC	0% 0.1%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, LD, NC, FC, TFC, TFD, FC100 IC, IC100, ID100	0.05% 0.01%
Launch date	LC, LD, NC, FC IC TFC, TFD IC100 ID100 FC100	June 3, 2002 March 15, 2016 December 5, 2017 May 30, 2018 January 31, 2020 February 15, 2022

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest Euro-Gov Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR").

The objective of the investment policy of DWS Invest Euro-Gov Bonds is to generate an above-average return in Euros.

At least 70% of the sub-fund's assets (after deduction of liquid assets) are invested in euro-denominated interest-bearing debt securities issued by states of the European Economic Area or the United Kingdom, government institutions within these states and supra-national public international bodies of which one or more of the states of the European Economic Area or the United Kingdom are members.

A maximum of 30% of the sub-fund's total assets (after deduction of liquid assets) may be invested in other interest-bearing debt securities issued by other states, government institutions and supra-national public international bodies that do not meet the above criteria.

The sub-fund may use, particularly in accordance with the investment limits stated in article 2 B. of the Sales Prospectus – general section, derivatives to optimize the investment objective.

The derivatives may only be used in compliance with the investment policy and the investment objective of DWS Invest Euro-Gov Bonds. The performance of the sub-fund is therefore besides other factors depending on the respective proportion of derivatives, e.g. swaps in the sub-fund's total assets.

To implement the investment policy and achieve the investment objective it is anticipated that the derivatives, such as swaps will be entered with at least BBB3 (Moody's) /BBB- (S&P, Fitch) rated financial institutions specializing in such transactions. Such OTC-agreements are standardized agreements.

In conjunction with the OTC transactions, it is important to note the associated counterparty risk. The sub-fund's counterparty risk resulting from the use of portfolio total return swaps will be fully collateralized. The use of swaps may furthermore entail specific risks that are explained in the general risk warnings.

The sub-fund can be invested in total or in parts in one or several OTC-transactions negotiated with a counterparty under customary market conditions. Therefore, the sub-fund can be invested in total or in parts in one or several transactions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental

changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted

by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14). and
- Investee countries subject to social violations (no 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via,

e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets, specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Euro-Gov Bonds

Legal entity identifier: 549300GWZOI706VXHT51

ISIN: LU0145652052

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10);
- Exposure to controversial weapons (no. 14); and
- Investee countries subject to social violations (no 16).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets (after deduction of liquid assets) are invested in euro-denominated interest-bearing debt securities issued by states of the European Economic Area or the United Kingdom, government institutions within these states and supra-national public international bodies of which one or more of the states of the European Economic Area or the United Kingdom are members.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation. Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0145652052/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest European Equity High Conviction

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	MSCI EUROPE in EUR, administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI EUROPE in EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, LD, FC, NC, TFC, TFD USD LC	EUR USD
Front-end load (payable by the investor)	LC, LD, USD LC FC, TFC, TFD NC	up to 5% 0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	LC, LD, USD LC FC, TFC, TFD NC	up to 1.5% up to 0.75% up to 2%
Service Fee p.a. (payable by the sub-fund)*	LC, LD, FC, USD LC, TFC, TFD NC	0% 0.2%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, LD, FC, NC, USD LC, TFC, TFD	0.05%
Launch date	LC, LD, FC, NC USD LC TFC, TFD	June 3, 2002 November 20, 2006 December 5, 2017

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest European Equity High Conviction, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest European Equity High Conviction is to achieve an appreciation as high as possible of capital invested in Euros. The sub-fund may acquire equities, interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equity warrants and index certificates. At least 75% of the sub-fund's assets are invested in equities of issuers having their headquarters in a member state of the EU, the United Kingdom, in Norway and/or in Iceland.

The term „High Conviction“ refers to the sub-fund concept. High Conviction implies that – based on the investment decision of the portfolio management – single stocks are implemented with greater weightings and less diversification than a benchmark-oriented product. „Conviction“ means that single equity positions might have significant weightings, exceeding 5%. The conviction should be expressed by clearly deviating from the benchmark with single stock weightings, if a stock is regarded as attractive. As a consequence, the portfolio will have less positions and diversification. Although there are no limitations regarding country or sector weightings, it can be expected that due to the conviction approach certain sectors or regions might have no or low weightings, if more attractive stocks from other sectors/regions have been identified.

Company-specific characteristics are emphasized in the selection of stocks (bottom-up approach). The focus is on companies that have a good market position, future-oriented products and competent management. Furthermore, the companies should concentrate on their strengths, aim for a yield-oriented use of resources and sustainable, above-average profit growth. In addition to these criteria, the companies should have shareholder-centered information policies, including detailed accounting and regular communication with investors. Accordingly, equities of companies shall be acquired that are expected to achieve results and/or share prices that are above average compared to the broad market.

Up to 25% of the sub fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities for the purposes of this sub-fund's investment policy.

Up to 25% of the sub fund's assets may be invested in money market instruments and deposits with credit institutions and up to 10% in money market funds.

In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Up to 10% of the sub fund's assets may be invested in units of other funds (investment fund units). The proportion of fund units exceeding 5% of the sub fund's assets may consist only of money market fund units.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics

as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined

assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting

from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not

subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference

portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest European Equity High Conviction

Legal entity identifier: 5493001DUQWUIOZABI65

ISIN: LU0145634076

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer's extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 75% of the sub-fund's assets are invested in equities of issuers having their headquarters in a member state of the EU, the United Kingdom, in Norway and/or in Iceland. High Conviction implies that – based on the investment decision of the portfolio management – single stocks are implemented with greater weightings and less diversification than a benchmark- oriented product. Single equity positions might have significant weightings, exceeding 5%, if a stock is regarded as attractive. Up to 25% of the sub fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities for the purposes of this sub-fund's investment policy. Up to 25% of the sub fund's assets may be invested in money market instruments and bank balances. A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0145634076/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Financial Hybrid Bonds

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	– (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD	EUR
Front-end load (payable by the investor)	FC, FD	0%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD	up to 0.6%
Service Fee p.a. (payable by the sub-fund)*	FC, FD	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, FD	0.05%
Launch date	FC, FD	November 30, 2015

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

This sub-fund is aimed at semi-institutional and institutional clients only.

For the sub-fund with the name DWS Invest Financial Hybrid Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Financial Hybrid Bonds is to generate an above average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund may invest globally in interest-bearing securities, in convertible bonds, in contingent convertibles, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend-right certificates, in derivatives as well as in money market instruments and liquid assets.

At least 50% of the sub-fund's assets shall be invested globally in hybrid bonds issued by financial issuers.

Hybrid bonds are bonds, which due to their structure have both debt and equity capital characteristics. Equity-like features can include loss participations and profit-linked interest payments.

Debt-like features can include a fixed maturity date or call dates fixed on issue, which are frequently associated with hybrid bonds.

Hybrid bonds also encompass subordinated bonds (Tier 1 and Tier 2 bonds), dividend-right certificates, convertible and warrant-linked bonds as well as insurance company subordinated bonds and contingent convertibles.

Up to 49% of the sub-fund's assets may be invested in interest-bearing debt securities that do not meet the above-mentioned criteria.

Up to 100% of the sub-fund's assets may be invested in subordinated bonds.

Up to 10% of the sub-fund's assets may be invested in equities (via exercising conversion rights), including convertible preference shares.

The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental

changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined,

the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund will not invest in ABS or MBS securities.

Derivatives may be used for hedging and investment purposes.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In addition, the sub-fund may invest in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus, including the assets mentioned in article 2 A. (j).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Specific risk warnings

Pursuant to the new banking regulations (Basel III, implemented in the EU by Directive 2013/36/EU (hereinafter "CRD IV"), of the European Parliament and of the Council of June 26, 2013, on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, amending Directive 2002/87/EC and repealing Directives 2006/48/EC and 2006/49/EC and Regulation (EU) No. 575/2013 (hereinafter "CRR") of the European Parliament and of the Council of June 26, 2013, on prudential requirements for credit institutions and investment firms and amending Regulation (EU) No. 648/2012 banks must have higher capital buffers and also meet higher regulatory requirements regarding capital adequacy. This is the reason why credit institutions in particular issue mandatory convertible bonds called "contingent convertibles" ("CoCos").

CoCos are perpetual subordinated bonds that reward the investors risks with a high fixed interest rate ("coupon") and can be called by the issuer at the dates specified in the issue documents ("issue prospectus(es)"). In the event that the CoCo is called by the issuer, the CoCo investor (in this case the sub-fund), receives the nomi-

nal value ("nominal value") of the CoCo position held. This, however, does not apply if a criterion that initiates a conversion ("conversion trigger") occurs beforehand – with the possible consequence of a total loss or a reduction of the nominal value (point 2).

These types of conversions (point 2) – which are disadvantageous for CoCo investors – and which are initiated by trigger events (point 1) are described in more detail below. From the perspective of the issuer, CoCos have loss-balancing properties, as the issuer's risk is transferred to the CoCo investor. Compared to other bonds and debt securities, CoCos are therefore associated with an increased risk of loss for the CoCo investor, and therefore for the investor in the sub-fund.

1. Criteria that initiate a conversion ("trigger events")

From the perspective of the issuer, the loss-balancing characteristic of a CoCo bond lies in the fact that the nominal value of the CoCo is fully or partially converted to equity capital (shares) of the issuer or fully or partially written down (see point 2) if certain trigger events that are defined precisely in the issue prospectus for the CoCo bond occur.

The exact configuration of the trigger events in the issue prospectus can be quite different, depending on the CoCo bond. Therefore from the perspective of the CoCo investor, it is difficult to conduct a standardized, transparent risk assessment of CoCos. There are different types of trigger events, which can also be combined with other triggers specified in the issue prospectus. The following trigger events, among others, may be defined in the issue prospectus for a CoCo bond:

Technical trigger: A trigger event is a technical trigger if it is linked to a specific accounting-related key figure such as the equity ratio of the issuer.

Discretionary trigger: A trigger event is a discretionary trigger if it is specified in the issue prospectus that the issuer's competent supervisory authority can initiate a conversion of the nominal value of the CoCo bond into share capital. That is the case when the issuer's competent supervisory authority has, at its sole discretion, determined that the issuer has reached the point at which it can no longer survive without additional equity capital.

Combined triggers: In addition to a trigger at the level of the credit institution, a trigger at the level of the associated corporate group of the issuer can also be specified in the issue prospectus.

2. Types of conversion following the occurrence of a trigger event

There are three different types of conversion, depending on the configuration of the CoCo bond specified in the issue prospectus.

- a) Conversion into shares: If the issuer falls below the specified trigger level, the nominal value of the CoCo bond is converted into shares at a conversion ratio already specified

in the issue prospectus. After conversion, the CoCo investor holds shares of the issuer of the CoCo bond. This shareholding may lead to a total loss of capital invested.

- b) Permanent full or partial write-down of the nominal value: With this variant, the nominal value of the CoCo bond is fully or partially reduced (i.e. written down) without the CoCo investor receiving compensation for this. This is initially synonymous with a corresponding loss of capital for the CoCo investor. In the case of a full write-down, the CoCo investor suffers a loss of the nominal value, and therefore the entire capital invested (total loss). In the event of a partial write-down, the nominal value of the CoCo bond is reduced by the corresponding amount (loss or proportional loss applicable to it).

- c) Temporary full or partial write-down of the nominal value: Unlike the second type of conversion, the full or partial reduction of the nominal value initially only takes place temporarily. The duration of the reduction is, however, not foreseeable and is at the sole discretion of the issuer, taking into account the applicable regulatory requirements. "Temporary" also means that the issuer, at its sole discretion and in accordance with the prudential regulations, has the option of increasing the nominal value again.

In the event of a partial write-down of the nominal value pursuant to point 2 (b) and (c), the subsequent coupon payments are based on the reduced nominal value (for the duration of the write-down).

In summary, it can be said that every conversion is associated with a loss of capital from the perspective of the CoCo investor, with the amount of the capital loss depending primarily on the terms and conditions set out in the issue prospectus.

3. Selected risks

CoCos are associated in particular with the risks listed below, which must be taken into consideration for an investment in CoCos.

- a) Risk of falling below the specified trigger level (trigger level risk)

The probability and the risk of a conversion or write-down are determined by the difference between the trigger level and the applicable regulatory equity ratio of the CoCo issuer.

The technical trigger is at least 5.125% of the regulatory equity ratio specified in the issue prospectus of the respective CoCo bond. Especially in the case of a high trigger, CoCo investors may lose the capital invested, for example in the case of a write-down of the nominal value or conversion into equity capital (shares).

At the level of the sub-fund, this means that the actual risk of falling below the trigger level is difficult to assess in advance, as, for example, the equity ratio of the issuer is only published quarterly and the actual gap between the trigger level and the equity ratio only becomes known at the time of publication.

- b) Risk of suspension of the coupon payment (coupon cancellation risk)

The issuer or the supervisory authority can suspend the coupon payments at any time. Coupon payments that are canceled are not made up for when coupon payments are resumed. For the CoCo investor, there is a risk that not all of the coupon payments expected at the time of acquisition will be received.

- c) Risk of a change to the coupon (coupon resetting risk)

If the CoCo bond is not called by the CoCo issuer on the specified call date, the issuer can redefine the terms and conditions of issue. If the CoCo bond is not called by the issuer, the amount of the coupon can be changed on the call date.

- d) Risk due to prudential requirements (risk of a reversal of the capital structure)

A number of minimum requirements in relation to the equity capital of banks were defined in CRD IV. The amount of the required capital buffer differs from country to country (depending on the prudential regulations applicable to the issuer).

At sub-fund level, the different national requirements have the consequence that the conversion based on a discretionary trigger or suspension of the coupon payments can take place depending on the legal regulations applicable to the issuer and that an additional uncertainty factor exists for the CoCo investor or the investor arising from the national terms and conditions and the discretionary decisions of the respective competent supervisory authority.

Moreover, the opinion of the competent supervisory authority, as well as the relevance criteria for the opinion cannot be conclusively assessed in advance.

- e) Call risk and risk of the competent supervisory authority preventing a call (prolongation risk)

CoCos are perpetual long-term debt securities that are callable by the issuer at call dates specified in the issue prospectus. The decision to call the bond is made at the sole discretion of the issuer but it does require the approval of the issuer's competent supervisory authority. The supervisory authority makes its decision in accordance with applicable prudential provisions.

The CoCo investor can only resell the CoCo bond on a secondary market, which in turn is associated with corresponding market and liquidity risks.

- f) Equity capital and subordination risk (risk of a reversal of the capital structure)

In the case of conversion to shares, CoCo investors become shareholders when the trigger occurs. In the event of insolvency, claims of shareholders may have subordinate priority and their settlement is dependent on the remaining funds available. The conversion of CoCos can therefore lead to a total loss of capital.

- g) Risk of concentration on a sector

Due to the special structure of CoCos, the risk of concentration on one sector may arise due to the uneven distribution of risks with regard to financial securities. Due to legal regulations, CoCos are part of the capital structure of financial institutions.

- h) Liquidity risk

CoCos entail a liquidity risk in a tense market situation. This is due to the special investor base and the lower total volume on the market compared to normal bonds.

- i) Income valuation risk

Due to the fact that CoCos can be called on a flexible basis, it is not clear which date should be used for calculating the income. There is a risk on each call date that the maturity of the bond will be postponed and the income calculation must then be adjusted to the new date, which can lead to a different yield.

- j) Unknown risk

Due to the innovative nature of the CoCos and the highly changeable regulatory environment for financial institutions, risks may arise that cannot be foreseen at the present time.

Please also refer to the "Risks of investments in contingent convertibles" section in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section

"Efficient portfolio management techniques".

The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund's assets. The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Financial Hybrid Bonds
Legal entity identifier: 222100MAD31NBQ543C02
ISIN: LU1318737514

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 50% of the sub-fund's assets are invested globally in hybrid bonds issued by financial issuers. Up to 100% of the sub-fund's assets may be invested in subordinated bonds. Up to 10% of the sub-fund's assets may be invested in equities (via exercising conversion rights), including convertible preference shares. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and

environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or

- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU1318737514/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest German Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	CDAX (RI), administered by STOXX Ltd.
Reference portfolio (risk benchmark)	CDAX (RI)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, LD, NC, FC, PFC, TFC, TFD USD LC, USD LCH, USD FCH GBP CH RD	EUR USD GBP
Front-end load (payable by the investor)	LC, LD, USD LC, USD LCH NC FC, PFC, USD FCH, GBP CH RD, TFC, TFD	up to 5% up to 3% 0%

Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest German Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest German Equities is to achieve an above average return.

At least 75% of the sub-fund's assets are invested in equities, investment certificates, equity warrants, equity-linked warrants and subscription rights of German issuers. German issuers are defined as companies headquartered in Germany.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use suitable derivative financial instruments and techniques for hedging purposes and in order to achieve the investment objective, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps.

A maximum of 25% of the sub-fund's assets may be invested in instruments that do not fulfil the requirements of the preceding paragraph and in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and

principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

There can be no assurance that the sub-fund will achieve its investment objective.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.
- For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions

correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

PEA-compatibility

The sub-fund is eligible to the PEA (Plan d'Épargne en Actions), a fiscal advantage for French subscribers.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional

approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest German Equities
Legal entity identifier: 5493007TJOUS8TQOIU47
ISIN: LU0740822621

Environmental and/or social characteristics

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 75% of the sub-fund's assets are invested in equities, investment certificates, equity warrants, equity-linked warrants and subscription rights of German issuers. German issuers are defined as companies headquartered in Germany.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers

that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0740822621/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global Agribusiness

Investor profile	Risk-tolerant
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	S&P Global Agribusiness Equity Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg that is also an exchange trading day on the New York Stock Exchange (NYSE)
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Dilution adjustment (payable by the shareholder)**

PFC:
A dilution adjustment of up to 3% based on the gross redemption amount may be charged.
Please see the general section for further explanation.

Placement fee (payable from the sub-fund's assets)

PFC:
Up to 3% for the benefit of the distributor. Please see the general section for further explanation.

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Global Agribusiness, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR").

The objective of the investment policy of DWS Invest Global Agribusiness is to achieve an appreciation as high as possible of capital invested.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the agricultural industry. The relevant companies operate within the multi-layered food value chain. This includes companies involved in the cultivation, harvesting, planning, production, processing, service and distribution of agricultural products (forestry and agriculture companies, tool and agricultural machine manufacturers, companies in the food industry such as wine, cattle and meat producers and processors, supermarkets and chemical companies).

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

A maximum of 30% of the sub-fund's total assets may be invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose

underlying warrants are for securities, participation and dividend-right certificates of foreign and domestic issuers that do not satisfy the requirements of the preceding paragraph.

Up to 30% of the sub-fund's assets may be invested in short-term deposits, money market instruments and deposits with credit institutions and up to 5% in money market funds. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries.

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other Undertakings for Collective Investment in Securities and/or other collective investment undertakings as defined in A. (e), an investment limit of 5% shall apply to this sub-fund.

The sub-fund will not invest in contingent convertibles.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by

means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance,

risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Agribusiness

Legal entity identifier: 549300EJ63GGG8PUEG20

ISIN: LU0273158872

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

☐ No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose underlying warrants are for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the agricultural industry. The relevant companies operate within the multi-layered food value chain. Up to 30% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances. A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other

relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0273158872/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	(absolute VaR)
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

For the sub-fund with the name DWS Invest Global Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Global Bonds is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund's assets may be invested globally in the following instruments:

- interest-bearing debt securities issued by sovereign institutions (central banks, government agencies, government authorities and supra-national institutions) from developed countries or Emerging Markets;
- corporate bonds issued by companies from developed countries or Emerging Markets that may or may not offer an investment-grade status at the time of acquisition;
- covered bonds;
- convertible bonds;

- subordinated bonds;
- asset-backed securities.

The sub-fund's investments in the above-mentioned assets may account for up to 100% of the sub-fund's assets each. Furthermore, equity-linked derivatives may be used to achieve the sub-fund's objective. Derivatives may be used for hedging and investment purposes.

At least 95% of the sub-fund's assets will be in EUR or hedged into EUR.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavour-

able market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers

receive one of six possible scores, with “A” being the highest score and “F” being the lowest score. If an issuer’s score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers’ rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities.

The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic

activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee

companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

The term "asset-backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant

decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund, it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Bonds
Legal entity identifier: 549300VEERE9L8MJ5H51
ISIN: LU0616846035

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<div><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __%</div> <div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%</div>	<div><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments</div> <div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input checked="" type="checkbox"/> with a social objective</div> <div><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</div>

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets are globally invested in interest-bearing debt securities issued by sovereign institutions (central banks, government agencies, government authorities and supra-national institutions) from developed countries or Emerging Markets; corporate bonds issued by companies from developed countries or Emerging Markets that may or may not offer an investment-grade status at the time of acquisition; covered bonds; convertible bonds; subordinated bonds or asset-backed securities. Investments in these assets may account for up to 100% of the sub-fund's assets each. At least 95% of the sub-fund's assets will be in EUR or hedged into EUR.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of

“E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0616846035/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global High Yield Corporates

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investment Management Americas Inc., 345 Park Avenue, New York, NY 10154, United States of America
Performance benchmark	ICE BoA ML Global High Yield Developed Markets Non-Fin Constrained hedged to USD administrated by ICE Data Indices, LLC.
Reference portfolio (risk benchmark)	ICE BoA ML Global High Yield Developed Markets Non-Fin Constrained hedged to USD
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Global High Yield Corporates, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Global High Yield Corporates is to generate an above-average return for the sub-fund.

At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition.

Up to 30% of the sub-fund's assets may be invested in corporate bonds that do not meet the above-mentioned criteria.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

Up to 20% of the sub-fund's assets may be invested in equities, equity certificates and dividend-rights.

The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

The sub-fund manager aims to hedge any currency risk versus the dollar in the portfolio.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC con-

tracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for

example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial

weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund’s assets into listed or non-listed equities. Furthermore, the sub-fund manager may also participate in capital increases

or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

In addition, the sub-fund's assets may be invested in all other permissible assets.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net pres-

ent value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global High Yield Corporates

Legal entity identifier: 222100NFGTM5U2CG7U22

ISIN: LU1506496097

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Up to 20% of the sub-fund's assets may be invested in equities, equity certificates and dividend-rights. The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and

environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or

- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU1506496097/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global Infrastructure

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager RREEF America LLC, 222 S. Riverside Plaza, Floor 24, Chicago, IL 60606, United States of America
Performance benchmark	–
Reference portfolio (risk benchmark)	Dow Jones Brookfield Global Infrastructure Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Global Infrastructure, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The main investment objective of the sub-fund DWS Invest Global Infrastructure is to achieve a long-term sustained capital appreciation in Euros through investments in promising companies of the "Global Infrastructure" sector.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets (after deduction of liquid assets) are invested in equities, other equity securities and uncertificated equity instruments of issuers of the "Global Infrastructure" sector.

Infrastructure companies provide an essential product or service to a segment of the population at a given time and cost, and often retain these characteristics for an extended period of time.

The strategic competitive advantage of infrastructure assets is often protected by high barriers to entry of alternative suppliers. These high barriers to entry can take various forms, including:

- requirements imposed by legislation and/or regulation;
- natural barriers like planning or environmental restrictions, or availability of land;
- high costs of new development, such as the cost to build roads;
- long-term exclusive concessions and customer contracts;
- efficiencies provided by economies of scale such as reductions in marketing or other services.

These high barriers to entry have the effect of protecting the cash flows generated by these infrastructure assets, because services provided such as parking, roads, and communications towers can generally only be delivered by relatively large and costly physical assets in close proximity to customers. This is a critical distinction between infrastructure and other industries.

The sub-fund manager distinguishes between social infrastructure and economic infrastructure. The sub-fund will be more focused on the latter one. The sub-fund manager understands under "economic infrastructure" the services for which the user is prepared to pay such as transport,

gas, electricity, water and communications. Due to the large size and cost and often monopoly characteristics of these assets, Infrastructure has historically been financed, built, owned and operated by the state. Infrastructure includes:

- Transport (roads, airports, seaports, rail);
- Energy (gas and electricity transmission, distribution and generation);
- Water (irrigation, potable water, waste treatment);
- Communications (broadcast/mobile towers, satellites, fiber and copper cables).

The potential investment universe comprises more than 400 stocks, broadly representing all the listed infrastructure assets in the world.

The social infrastructure comprises companies for instance in the health sector (hospitals, nursing homes).

A total of up to 30% of the sub-fund's assets (after deduction of liquid assets) may be invested in

- a) equity, other equity securities and uncertificated equity instruments of international issuers that do not operate predominantly in the Global Infrastructure sector;
- b) interest-bearing securities, as well as convertible bonds and warrant-linked bonds issued by companies in the global infrastructure sector or by issuers in accordance with (a) above and which are denominated in any freely convertible currency.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter

score of “E” or “F”) are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty

- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);

- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than

35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly

specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Specific risks

The sub-fund's performance will largely be determined by the following factors, which give rise to both upside and downside potential:

- the performance of international equity markets;
- company and sector specific developments;
- exchange-rate movements of non-euro currencies against the euro.

The sub-fund may focus its investments on different sub-sectors, countries and market segments for a certain time period on a variable basis. In addition, the sub-fund could use derivatives. These investments could also lead to further performance and risks.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Infrastructure

Legal entity identifier: 549300GEJAD75G8V1Z19

ISIN: LU0329760770

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets (after deduction of liquid assets) are invested in equities, other equity securities and uncertificated equity instruments of issuers of the "Global Infrastructure" sector. A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and

environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or

- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**

reflecting the share of revenue from green activities of investee companies

- **capital expenditure**

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure**

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0329760770/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global Real Estate Securities

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	RREEF America LLC, 222 S. Riverside Plaza, Floor 24, Chicago, IL 60606, United States of America. RREEF America LLC has partially delegated its fund management services to the sub-managers DWS Alternatives Global Limited and DWS Investments Australia Limited.
Performance benchmark	–
Reference portfolio (risk benchmark)	FTSE EPRA/NAREIT Developed Index
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Global Real Estate Securities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Global Real Estate Securities is to generate an above average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund invests primarily in the equities of listed companies that own, develop or manage real estate, provided that these equities are considered to be transferable securities as defined by article 41 (1) of the Law of 2010, on Undertakings for Collective Investment.

In particular, the sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices.

At least 70% of the fund's total assets are invested in

- a) equities of real estate companies, real estate investment companies including closed real estate investment trusts (REITs) of any legal form, as well as
- b) securities similar to equities, such as participation and dividend-right certificates of companies according to (a) above, and
- c) derivative financial instruments whose underlying instruments directly or indirectly (i.e., via equity indices) constitute investments according to (a).

Where liquid assets cover obligations arising from derivative financial instruments according to (c) above, such liquid assets are attributed to the relevant 70%. Investments according to (a) and (b) herein must not include open-ended real estate investment funds deemed to be collective investment undertakings under Luxembourg law.

In compliance with article 2 of the general section of the Sales Prospectus, the investment policy can also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forward contracts, futures contracts on financial instruments and options on such contracts, as well as privately negotiated swap contracts on any type of financial instrument.

In particular, derivatives based on equities, bonds, currencies or recognized financial indices may also be acquired.

Up to 30% of the sub-fund's assets may be invested in equities and/or securities similar to equities issued by companies worldwide that do not meet the requirements of (a) and (b) above.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an

issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("contro-

versial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of

proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 25% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via

the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Real Estate Securities

Legal entity identifier: 549300Z73T43NCO9DO30

ISIN: LU0507268943

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund invests primarily in the equities of listed companies that own, develop or manage real estate, provided that these equities are considered to be transferable securities as defined by Article 41 (1) of the Law of 2010, on Undertakings for Collective Investment. In particular, the sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. At least 70% of the fund's total assets are invested in: equities of real estate companies, real estate investment companies including closed ended real estate investment trusts (REITs) of any legal form, securities similar to equities, such as participation and dividend-right certificates, derivative financial instruments like equity indices. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 25% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0507268943/> as well as on your local country website www.dws.com/fundinformation.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Gold and Precious Metals Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy of DWS Invest Gold and Precious Metals Equities is to achieve as high an appreciation as possible of capital invested in U.S. dollars by investing globally in companies in the precious-metals sector deemed to be promising.

The sub-fund is actively managed and is not managed in reference to a benchmark.

In doing so, at least 70% of the sub-fund's assets are invested in equities of foreign and domestic issuers whose revenues or earnings were generated primarily from the exploration for and the extraction and processing of gold, silver, platinum or other precious metals. The targeted companies can be active in exploration, extraction, production, processing and sales.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use suitable derivative financial instruments and techniques in order to implement the investment strategy and to achieve the investment objective, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps. Where liquid assets cover obligations arising from derivative financial instruments, such liquid assets are attributed to the relevant 70%.

Furthermore, the Sub-fund also intends from time to time to establish an exposure of up to 25% of the Sub-fund's assets to the international precious metals markets (including an exposure to gold, silver, palladium and platinum). However this limit can be utilised by establishing an exposure to one single precious metal. For this purpose and within this 25% limit, the Sub-fund may acquire derivative financial instruments whose underlying instruments are precious metals indices and sub-indices in accordance with the 2008 Regulation, as well as ETFs and 1:1 certificates (including Exchange Traded Commodities (ETCs)) the underlying of which are single precious metals and that meet the requirements of transferable securities as determined in article 2 A. (j) of the general section of the Sales Prospectus.

The sub-fund may not enter into any obligations regarding the transfer of physical commodities.

A maximum of 30% of the sub-fund's assets may be invested in instruments that do not satisfy the requirements of the preceding paragraphs as well as in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares,

B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund management considers ESG criteria in its investment decisions ("ESG-Criteria" for the corresponding terms Environmental, Social and Governance). In order to determine whether and to what extent the sub-fund's assets meet the ESG-Criteria, a proprietary ESG database evaluates assets according to ESG-Criteria.

The ESG database processes data from multiple ESG data providers, public sources and considers internal assessments based on a defined assessment and classification methodology. The ESG database is therefore based on the one hand on data and figures and, on the other hand on assessments, that take into account factors beyond the processed data and figures, such as future expected ESG developments, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters and corporate decisions of the issuer. The ESG database uses a variety of assessment categories to assess whether investments meet ESG-Criteria, including amongst others, DWS Norm Assessment, DWS Climate Risk Assessment, DWS ESG Quality Assessment, Exposure in controversial sectors. According to the ESG database analysis, the target investments receive one of six possible scores, with "A" being the highest score and "F" being the lowest score.

The sub-fund management only considers the Climate Risk Assessment, Norm Assessment and involvement in controversial weapons.

DWS Climate Risk Assessment

The DWS Climate Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as investment and are not suitable for the sub-fund.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as investment and are not suitable for the sub-fund.

Involvement in controversial weapons

The ESG database assesses a company's involvement in controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, chemical and biological weapons. Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

The sub-fund does not promote any Environmental or Social characteristics or any combination of these characteristics. The consideration of ESG criteria in investment decisions in the form of exclusions as described above does not pursue an ESG and/or sustainable investment policy.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as it does not pursue an ESG and/or sustainable investment policy as indicated above.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least

51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

DWS Invest Latin American Equities

Investor profile	Risk-tolerant
Currency of sub-fund	EUR

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Latin American Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy for the DWS Invest Latin American Equities is to achieve an above-average return. At least 70% of the sub-fund's assets are invested in equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by companies registered in a Latin-American country (or having their principal business activity in a Latin-American country or which, as holding companies, hold primarily interest in companies registered in a Latin-American country such as e.g. Argentina, Brazil, Chile, Colombia, Mexico, Peru or Venezuela.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008, relating to certain definitions of the Law of 2010 (the 2008 Regulation) and article 41 (1) or (2) of the Law of 2010 through Participatory Notes (P-Notes).

The still-developing exchanges in some of the Latin-American countries present increased opportunities and risks, and are not currently deemed to be regulated markets as defined by article 41 of the Law of 2010; investment in those countries is therefore limited to 10% of the fund's assets and counted towards the investment limit stated in article 2 B. (h) of the general section of the Sales Prospectus.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use suitable derivative financial instruments and techniques in order to implement the investment policy and achieve the investment objective, including in particular – but not limited to – forwards, futures, single-stock-futures, options or equity swaps. Where liquid assets cover obligations arising from derivative financial instruments such liquid assets are attributed to the relevant 70%.

A maximum of 30% of the sub-fund's assets may be invested in equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants of issuers that do not fulfil the requirements of the preceding paragraphs.

Up to 30% of the sub-fund's assets may be invested in short-term deposits, money market instruments and deposits with credit institutions and up to 10% in money market funds. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as the investment strategy does not pursue any environmental or social characteristics.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment:

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j).

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;

- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management makes all management decisions for the sub-fund taking into account the legal and contractual investment restrictions considering the sustainability risks.

The following applies to the consideration of sustainability risks in investment decisions: The sub-fund management also considers sustainability risks in its investment decisions besides the common financial data. This consideration applies to the entire investment process, both for the fundamental analysis of investments and for the investment decisions.

The sub-fund management's responsible investment approach is centred in ESG-integrated fundamental analysis, proxy voting activities and engagement with investee companies. The ESG integration approach is centred in the investment research process, with a focus on fundamental equity research. The sub-fund manager's proprietary method projects ESG issues into the DCF models focusing on the cash flow lines, thus influencing target prices of analysed companies. The objective is to estimate the NPV of material ESG issues to anticipate events that may result in value creation or destruction.

Itaú Asset Management exercises active ownership through voting on investee companies' AGMs and through engagements with investee companies. The objective is to have a positive dialogue with companies regarding the promotion of best ESG practices.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

DWS Invest Low Carbon Corporate Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Solactive ISS Paris Aligned Select Euro Corporate IG Index, administered by Solactive AG
Reference portfolio (risk benchmark)	Solactive ISS Paris Aligned Select Euro Corporate IG Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Launch date	FD, LD, XD FC, TFD, USD LDH, USD XCH	June 1, 2021 September 8, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest Low Carbon Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted. Further, the sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818. However, the sub-fund has designated the Solactive ISS Paris Aligned Select Euro Corporate IG Index as performance benchmark (Index). The Index is a rules-based index, engineered to measure the performance of liquid, euro denominated, investment grade corporate debt. The Index provides exposure to a IG corporate debt portfolio, which bases upon the ISS ESG climate analysis and is aligned with the 1.5°C scenario through 2050 compared to the underlying investible universe (i.e. the Solactive Euro IG Corporate Index).

Detailed information on the index, the underlying calculation methodology as well as further details can be found at <https://www.solactive.com/indices/>.

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change (the 'Paris agreement') is an integral part of the sub-fund's concept.

The objective of the investment policy of DWS Invest Low Carbon Corporate Bonds is to generate an above-average return for the sub-fund.

The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporates worldwide that are very low CO2 emitters, as well as issuers that are in the process of transition to low emissions.

At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. In case of split rating between three agencies, the lower rating of the two best ratings should be applicable. In case of split rating between two agencies, the lower rating should be applicable. In the case of no rating, an internal rating may be applied. When a holding asset is downgraded to lower than B3/B-, such asset will be sold within 6 months.

At least 70% of the sub-fund's assets will be in EUR or hedged into EUR.

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy. The sub-fund management seeks to attain this by a two-step approach.

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives A to F letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate Risk and Transition Assessment

The DWS Climate Risk and Transition Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, i.e., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, i.e., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("contro-

versial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment. Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain its sustainable objective by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the sustainable objective of the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

Exclusions

The sub-fund management excludes all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
- (e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
- (f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
- (g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, esti-

mated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

Reduction of the greenhouse gas (GHG) intensity of the portfolio

The sub-fund management defines a corporate debt portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the iBoxx Euro Corporate Index and is at no time allowed to fall short beyond this limit and stay below 300 tons of GHG emissions per million enterprise value including cash (300t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

Decarbonisation trajectory

The portfolio manager reduces the upper limit for the overall portfolio carbon intensity on average year over year by 7%. The reduction starts at the launch date of the first share class of the sub-fund. Starting point is the fixed reference value of 300t CO₂ /EVIC and will end with a value of zero for the carbon intensity. The target reduction of 7% year over year shall be calculated geometrically. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund's assets in sustainable investments in accordance with article 2 (17) SFDR.

Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation

- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);

- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be

justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund's investments in asset-backed securities shall be limited to 20% of the sub-fund's net asset value. The term "asset backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales

Prospectus, amongst others, in the section “Efficient portfolio management techniques”. The selection of counterparties to any total return swap is subject to the principles as described in the section “Choice of counterparty” of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section “General Risk Warnings”, and in particular the section “Risks connected to derivative transactions” of the Sales Prospectus.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund’s securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting as the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager’s evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk Disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund. In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives (“risk benchmark”).

Leverage is not expected to exceed twice the value of the investment sub-fund’s assets. However, the expected leverage should not be viewed as an additional risk limit for the fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Low Carbon Corporate Bonds
Legal entity identifier: 254900P7KL1F8KBDUO70
ISIN: LU2331315981

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement.

Further, this sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 and further described in "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".

However, the sub-fund has designated the Solactive ISS Paris Aligned Select Euro Corporate IG Index as performance benchmark (Index). The Index is a rules-based index, engineered to measure the performance of liquid, euro denominated, investment grade corporate debt. The Index provides exposure to a IG corporate debt portfolio, which bases upon the ISS ESG climate analysis and is aligned with the 1.5°C scenario through 2050 compared to the underlying investible universe (i.e. the Solactive Euro IG Corporate Index).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics as well as the sustainable investment is assessed in two steps via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

The ESG assessment methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

In a second step the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 are applied to attain the promoted reduction of carbon emissions as further described in “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. For that purpose, the sub-fund management will use in particular the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) of Commission Delegated Regulations (EU) 2020/1818 for Paris-aligned Benchmarks
- 50% reduction of greenhouse gas (GHG) intensity of the portfolio compared to the investable universe
- Setting of a decarbonisation trajectory – with at least 7% reduction of GHG intensity on average per annum

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- GHG emissions (no. 1);
 - Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Share of non-renewable energy consumption and production (no. 5);
 - Emissions to water (no. 8);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporates worldwide that are very low CO2 emitters, as well as issuers that are in the process of transition to low emissions. At least 75 % of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. At least 70% of the sub-fund's assets will be in EUR or hedged into EUR.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics and the methodological requirement of Commission Delegated Regulation (EU) 2020/1818 as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology and the carbon emission reduction strategy, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region.

Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

• **Exclusions**

The sub-fund management excludes all of the following as an investment:

(a) Companies involved in any activities related to controversial weapons;

(b) Companies involved in the cultivation and production of tobacco;

(c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;

(d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;

(e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

(f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

(g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

• **Reduction of the GHG intensity of the portfolio**

The sub-fund management defines a corporate debt portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the iBoxx Euro Corporate Index and is at no time allowed to fall short beyond this limit and stay below 300 tons of GHG emissions per million enterprise value including cash (300t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

• **Decarbonisation trajectory**

The portfolio manager reduces the upper limit for the overall portfolio carbon intensity on average year over year by 7%. The reduction starts at the launch date of the first share class of the sub-fund. Starting point is the fixed reference value of 300t CO₂ /EVIC and will end with a value of zero for the carbon intensity. The target reduction of 7% year over year shall be calculated geometrically. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practises of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g. issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

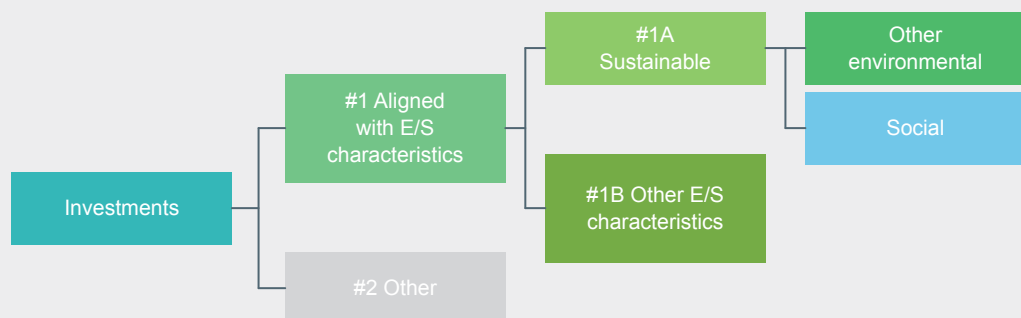

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 20% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 20% of the net assets of the sub-fund are invested in investments that are not aligned with the objective of reducing carbon emissions (#2 Not sustainable). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned:	
Fossil gas	0.00%
■ Taxonomy-aligned:	
Nuclear	0.00%
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned:	
Fossil gas	0.00%
■ Taxonomy-aligned:	
Nuclear	0.00%
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund will invest the remaining proportion of the net assets in investments that are not aligned with the promoted environmental and social characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

Remaining investments can be used by the portfolio management in particular for liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2331315981/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Metaverse

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI World Communication Services Index Net Return in EUR, 15% MSCI All Country World Index in EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, LC, LD, TFC, XC	EUR
Front-end load (payable by the investor)	FC, TFC, XC LC, LD	0% up to 5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, TFC LC, LD XC	up to 0.75% up to 1.5% up to 0,35%
Service Fee p.a. (payable by the sub-fund)*	FC, LC, LD, TFC, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, LC, LD, TFC, XC	0.05%
Launch date	FC, LC, LD, TFC, XC	Februar 15, 2023

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Metaverse, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Metaverse is to achieve long term capital appreciation. The sub-fund's assets will primarily be invested in equities of companies whose business will benefit from/or is currently related to the evolution of the digital world and here especially to the metaverse.

Such companies are providing computing power, virtual content for the metaverse (digital, virtual world) and those companies providing devices like hardware and wearables used in the virtual world and new digital payment methods, which enables users to acquire digital assets in the metaverse such as digital real estate and NFTs (non fungible tokens). This can also include disruptive financial intermediaries such as crypto currency exchange trading platforms or digital asset managers and/or custodians, which provide the infrastructure for settlement and payments. No direct investments in crypto currencies will be done.

The Metaverse is a collective virtual open space, created by the convergence of virtually enhanced physical and digital reality, commonly referred to as virtual reality. It is physically persistent and provides enhanced immersive experiences. Activities that take place in isolated environments (buying digital land and constructing virtual homes, digital twins in e.g., industrial environments, participating in a virtual social experience e.g. online gaming, etc.) will eventually take place in the Metaverse.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

At least 60% of the sub-fund's assets are invested in equities.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by

means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;

- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk Management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Metaverse

Legal entity identifier: 2549006ZY0U9C8B81K91

ISIN: LU2576371582

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund's assets will primarily be invested in equities of companies whose business will benefit from/or is currently related to the evolution of the digital world and here especially to the metaverse. At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public. At least 60% of the sub-fund's assets are invested in equities. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest Multi Opportunities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	60% MSCI All Country World Index, in EUR and 40% iBoxx Euro Overall Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Multi Opportunities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest Multi Opportunities is to achieve an above-average return.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund may invest in equities, in interest-bearing securities, in certificates on, for example, equities, bonds and indices, in investment funds, in derivatives, in convertible and warrant-linked bonds whose warrants relate to securities, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash. Depending on the evaluation of the market situation, the portfolio manager will

weight such asset classes in the portfolio of the sub-fund and, if necessary, may fully invest the sub-fund's assets in one of these categories.

Notwithstanding article 2 B. (i), the following applies:

The sub-fund's assets may be used to acquire shares of other Undertakings for Collective Investment in Transferable Securities and/or collective investment undertakings as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties.

Investments in shares of other collective investment undertakings other than Undertakings for Collective Investment in Transferable Securities must not exceed 30% of the sub-fund's net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in asset-backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable

derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The described investment policy may also be implemented by using Synthetic Dynamic Underlyings (SDU).

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

The sub-fund also intends from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets. For this purpose and within this 10% limit, the sub-fund may acquire derivative financial instruments whose underlying instruments are commodity indices and sub-indices in accordance with the 2008 Regulation, equities, interest-bearing securities, convertible bonds, convertible debentures and warrant-linked bonds, index certificates, participation and dividend-right certificates and equity warrants, as well as 1:1 certificates (including Exchange Traded Commodities (ETCs)) the underlying of which are single commodities/precious metals and that meet the requirements of transferable securities as determined in 2 A. a. of the general section of the Sales Prospectus. The sub-fund does not invest into futures on soft commodities, e.g. cotton, sugar, rice and wheat as well as all manner of livestock.

In addition the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus at least 25% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in such equity capital investments as defined in article 2 (8) of the German Investment Tax Act that may be acquired for the sub-fund in accordance with the Articles of Incorporation and this Sales Prospectus (mixed fund).

Equity capital investments in this respect are

- equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:
 - (i) units of investment funds;
 - (ii) units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
 - (iii) units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;

- (iv) units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- (v) units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.
- units of investment funds, which in accordance with their terms and conditions of investment invest more than 50% of their value or more than 50% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 51% of their value; if the terms and conditions of an equity fund make provisions for a percentage higher than 51% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds, which in accordance with their terms and conditions of investment invest at least 25% of their value or at least 25% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 25% of their value; if the terms and conditions of a balanced fund make provisions for a percentage higher than 25% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds that carry out a valuation at least once per week in the amount of the percentage of their assets published on each valuation date that they actually invest themselves, or as a fund of fund, in units of corporations.
- units of corporations admitted to official trading on a stock exchange or admitted to, or included in, another organized market;
- units of corporations that are not real estate companies and that are domiciled in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area and are subject there to corporate income tax and are not exempt from it;
- units of corporations that are not real estate companies and that are domiciled in a third country and are subject there to corporate income tax of at least 15% and are not exempt from it; and
- units of other investment funds, which in turn meet the requirements of indents 2 through 4 and of this sentence, in the respective amount specified there.

However, units of corporations are not those that correspond to the categories as defined in indent 1 (i) to (v) above or are held indirectly via partnerships.

Equity capital investments indirectly held by the sub-fund via partnerships are not equity capital investments.

Individual investment fund units may only be taken into consideration once for the purposes of determining the daily equity capital investment rate.

For the purposes of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. This organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 30%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 60%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section

"Efficient portfolio management techniques".

The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Units of corporations as defined in indents 2 through 4 are

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Multi Opportunities

Legal entity identifier: 549300YIMZGS19QNMI16

ISIN: LU1054321358

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may invest in equities, in interest-bearing securities, in certificates on equities, bonds and indices, in investment funds, in derivatives, in convertible and warrant-linked bonds whose warrants relate to securities, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash. Depending on the evaluation of the market situation, the portfolio manager will weight such asset classes in the portfolio of the sub-fund and, if necessary, may fully invest the sub-fund's assets in one of these categories. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value. The sub-fund also intends from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**

reflecting the share of revenue from green activities of investee companies

- **capital expenditure**

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure**

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/fund-of-funds/LU1054321358/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Multi Strategy

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	45% BBG Barc Global Aggregate Corporate EUR Index, 35% MSCI World Net TR Index in EUR, 15% BBG Barc Global High Yield Index, 5% JPM EMBI Global Diversified
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, LC, LD, XC	EUR
Front-end load (payable by the investor)	FC, FD, XC LC, LD	0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD LC, LD XC	up to 0.55% up to 0.95% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, LC, LD, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, FD, LC, LD, XC	0.05%
Launch date	FC FD, LC, LD XC	December 22, 2011 September 14, 2015 May 15, 2018

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest Multi Strategy, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR").

The objective of the investment policy of DWS Invest Multi Strategy is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund's assets may be invested globally in the following instruments:

- interest-bearing debt securities issued by sovereign institutions (central banks, government agencies, government authorities and supra-national institutions) from Developed countries or Emerging Markets;
- corporate bonds issued by companies from Developed Countries or Emerging Markets;
- covered bonds;
- convertible bonds and warrant-linked bonds;
- subordinated bonds;
- asset-backed securities;
- investment funds;
- exchange traded commodities (no embedded derivatives), if they are 1:1 certificates qualifying as transferable securities;
- equities;
- participation and dividend-right certificates;
- money market instruments;
- deposits;
- cash.

The sub-fund's investments in the above-mentioned assets may account for up to 100% of the sub-fund's assets each. Though, the sub-fund's investments in equities, in participation and dividend-right certificates shall be limited to 35% and the sub-fund's investments in investment funds shall be limited to 10%.

Up to 10% of the sub-fund's assets may be invested in investment funds.

Derivatives may be used for hedging and investment purposes.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, for-

ward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The described investment policy may also be implemented by using Synthetic Dynamic Underlyings (SDU).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics

as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as

strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

The term "asset-backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Investments in asset-backed securities may be done in physical asset-backed securities as well as in synthetic asset-backed securities.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section

“Efficient portfolio management techniques”.

The selection of counterparties to any total return swap is subject to the principles as described in the section “Choice of counterparty” of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section “General Risk Warnings”, and in particular the section “Risks connected to derivative transactions” of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section “Integration of sustainability risks in the investment process”.

Risk disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives (“risk benchmark”).

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund, it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund’s assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Multi Strategy

Legal entity identifier: 549300GGGEX2G55MCV04

ISIN: LU0616844766

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ **X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

☐ **No**

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may invest globally in interest-bearing securities, in equities, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend right certificates, in investment funds, in derivatives as well as in money market instruments, deposits and cash. The sub-fund's investments in the above-mentioned assets may account for up to 100% of the sub-fund's assets each. Though, the sub-fund's investments in equities, in participation and dividend-right certificates shall be limited to 35% and the sub-fund's investments in investment funds shall be limited to 10%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0616844766/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Nomura Japan Growth

Investor profile	Risk-tolerant
Currency of sub-fund	JPY
Sub-fund manager	DWS Investment GmbH has sub-delegated the fund management to Nomura Asset Management Europe KVG mbH, Gräfr. 109, 60487 Frankfurt/Main, Germany, which has sub-delegated the fund management to Nomura Asset Management Co Ltd. Tokyo, 2-2-1, Toyosu, Koto-ku, Tokyo 135-0061, Japan
Performance benchmark	–
Reference portfolio (risk benchmark)	TOPIX
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main that is also an exchange trading day on the Tokyo Stock Exchange
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Nomura Japan Growth, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy of DWS Invest Nomura Japan Growth is to achieve the highest possible capital appreciation.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 60% of the sub-fund's assets must be invested in equities of companies having their registered office in Japan.

Up to 20% of the sub-fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities in this respect.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 40% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 40% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as the investment strategy does not pursue any environmental or social characteristics.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment:

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also

meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management makes all management decisions for the sub-fund taking into account the legal and contractual investment restrictions considering the sustainability risks.

The following applies to the consideration of sustainability risks in investment decisions: The sub-fund management also considers sustainability risks in its investment decisions besides the common financial data. This consideration applies to the entire investment process, both for the fundamental analysis of investments and for the investment decisions.

In its portfolio management, the sub-fund manager considers, in addition to financial information, sustainability risks of portfolio companies.

In the fundamental analysis, sustainability risks may affect the corporate value of portfolio companies from the perspective of long-term valuation. Therefore, ESG analysis is integrated into any investment research. This includes the identification of global sustainability trends, financially relevant ESG issues and materiality.

Moreover, sustainability risks that may arise from issues of climate change or the violation of internationally recognized guidelines are subject to further consideration as the ESG aspects. The internationally recognized guidelines include the ten principles of the United Nations Global Compact, ILO core labour standards, UN guiding principles for business and human rights, and the OECD guidelines for multinational companies.

In order to take sustainability risks into account, the sub-fund manager uses non-financial information into which ESG data from its own research activities, as well as other research companies, are incorporated.

Portfolio management is conducted by an ESG-integrated fundamental analysis, and these investments continue to be monitored from a sustainability risk perspective. In addition, a dialogue or engagement is also sought with portfolio companies for aiming better corporate governance and greater management of ESG criteria.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Qi Global Climate Action, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

DWS Invest Qi Global Climate Action will invest in assets that contribute to the objective of reducing carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted. Further, the sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818.

Therefore, the objective of the investment policy of DWS Invest Qi Global Climate Action is to achieve a sustainable capital appreciation.

The sub-fund is actively managed and is not managed in reference to a benchmark.

"Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Investment decisions are the result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

At least 80% of the sub-fund's assets are invested in global equities. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market.

Up to 20% of the sub-fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities in this respect.

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy. The sub-fund management seeks to attain this objective by a two-step approach.

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, i.e., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, i.e., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts,

and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics.

However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology
In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

Exclusions

The sub-fund management excludes all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
- (e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
- (f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
- (g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

Reduction of the greenhouse gas (GHG) intensity of the portfolio

The sub-fund management defines an equity portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the MSCI World and is at no time allowed to fall short beyond this limit and stay below 180 tons of GHG emissions per million enterprise value including cash (180t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

The equity portfolio will have an aggregated exposure to high climate impact sectors which is at least equivalent to the aggregated exposure of the underlying investable universe to those sectors (MSCI World Index).

Decarbonisation trajectory

As an additional action to reduce the climate risk even further, the sub-fund management reduces the upper limit for the overall GHG intensity of the

portfolio year over year on average by 7%. The reduction starts on October 31, 2022. Starting point is the fixed reference value of 180t CO₂ /EVIC and will end with a value of zero for the GHG intensity. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR.

Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment)

and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure,

culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (Equity Fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;

- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of

each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Qi Global Climate Action

Legal entity identifier: 254900DB28E4TYR5ZI32

ISIN: LU2178858259

Environmental and/or social characteristics

What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement.

Further, this sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 and further described in "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics as well as the sustainable investment is assessed in two steps via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

The ESG assessment methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

In a second step the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 are applied to attain the promoted reduction of carbon emissions as further described in “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. For that purpose, the sub-fund management will use in particular the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) of Commission Delegated Regulations (EU) 2020/1818 for Paris-aligned Benchmarks
- 50% reduction of greenhouse gas (GHG) intensity of the portfolio compared to the investable universe
- Setting of a decarbonisation trajectory – with at least 7% reduction of GHG intensity on average per annum

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- GHG emissions (no. 1);
 - Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Share of non-renewable energy consumption and production (no. 5);
 - Emissions to water (no. 8);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund's assets are invested in assets that contribute to the objective of reducing carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change. At least 80% of the sub-fund's assets are invested in global equities. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market. "Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology and the carbon emission reduction strategy, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or

corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

• **Exclusions**

The sub-fund management excludes all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction,

distribution or refining of hard coal and lignite;

(e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

(f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

(g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

• **Reduction of the GHG intensity of the portfolio**

The sub-fund management defines an equity portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the MSCI World and is at no time allowed to fall short beyond this limit and stay below 180 tons of GHG emissions per million enterprise value including cash (180t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

The equity portfolio will have an aggregated exposure to high climate impact sectors which is at least equivalent to the aggregated exposure of the underlying investable universe to those sectors (MSCI World Index).

• **Decarbonisation trajectory**

As an additional action to reduce the climate risk even further, the sub-fund management reduces the upper limit for the overall GHG intensity of the portfolio year over year on average by 7%. The reduction starts on 31.10.2022. Starting point is the fixed reference value of 180t CO₂ /EVIC and will end with a value of zero for the GHG intensity. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practises of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g. issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 20% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 20% of the net assets of the sub-fund are invested in investments that are not aligned with the objective of reducing carbon emissions (#2 Not sustainable). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned:	
Fossil gas	0.00%
■ Taxonomy-aligned:	
Nuclear	0.00%
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned:	
Fossil gas	0.00%
■ Taxonomy-aligned:	
Nuclear	0.00%
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund will invest the remaining proportion of the net assets in investments that are not aligned with the promoted environmental and social characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

Remaining investments can be used by the portfolio management in particular for liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2178858259/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Qi LowVol Emerging Markets

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS International GmbH, Mainzer Landstr. 11–17, 60329 Frankfurt/Main, Germany
Performance benchmark	MSCI Emerging Markets Daily Net, administered by MSCI Limited.
Reference portfolio (risk benchmark)	MSCI Emerging Markets Daily Net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg, Frankfurt/Main and Cologne
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Qi LowVol Emerging Markets, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Qi LowVol Emerging Markets is to achieve a sustainable capital appreciation.

"Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Investment decisions are the

result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

In the portfolio construction the sub-fund management is focusing on equities that are expected to have a lower volatility in comparison to the broad equity market.

At least 60% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

A company is viewed as having its principal business activity in emerging-market countries if a significant part of its earnings or revenues is generated there. Emerging markets are countries listed in the MSCI Emerging Markets Index or listed in the Standard & Poor's Emerging Markets Database (EMDB). Further, countries which are listed as low or middle income (including both lower middle and higher middle income) by the World Bank will be considered as Emerging Markets even if such countries are neither listed in the MSCI Emerging Markets Index nor in the EMDB but must not be included in the MSCI World Index. At present, the emerging countries most significant for the sub-fund are mostly, but not exclusively, located in Asia, Eastern Europe and South America and include, among others, Brazil, China, India, Indonesia, Korea, Malaysia, Mexico, Russia, South Africa, Taiwan, Thailand and Turkey. If investments are effected in countries that do not yet possess a regulated market, these securities shall be considered as unlisted financial instruments.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use derivative techniques to achieve the investment objective and implement the investment strategy, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions. The sub-fund may invest more than 10% of the sub-fund's assets in securities that are traded on the Moscow Exchange (MICEX-RTS).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may be invested in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 40% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 40% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B.o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is

eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to

one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies.

An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund’s assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund’s gross assets (determined as being the value of the sub-fund’s assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic

- Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are expected to be components of the benchmark and the portfolio is expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate to a limited extent (e.g., by a positioning outside of the benchmark as well as underweighting or overweighting) and the actual degree of freedom is typically relatively low. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environ-

ment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Qi LowVol Emerging Markets

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 60% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. "Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest SDG Corporate Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	– (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, LC, TFC, XC	EUR
Front-end load (payable by the investor)	FC, TFC, XC LC	0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FC, TFC LC XC	up to 0.4% up to 0.5% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	FC, LC, TFC, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, LC, TFC, XC	0.05%
Launch date	FC, LC, TFC, XC	March 31, 2022

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest SDG Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund has sustainable investment as its objective and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its

assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG Corporate Bonds is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporate issuers worldwide (private and

semi-private) that (i) have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (SDG) or (ii) that finance special SDG related/themed projects (use of proceeds bonds).

At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by

Moody's) or B- (rated by S&P and Fitch) at time of acquisition. In case of split rating between three agencies, the lower rating of the two best ratings should be applicable. In case of split rating between two agencies, the lower rating should be applicable. In the case of no rating, an internal rating may be applied. When a holding asset is downgraded to lower than B3/B-, such asset will be sold within 6 months.

The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

The sub-fund management invests at least 90% of the sub-fund's assets in issuers that contribute to environmental and/or social objectives and to at least one of the UN Sustainable development goals ('SDG') or in debt instruments where the use of proceeds is limited to projects with environmental, climate benefits and/or other sustainability or ESG themed projects (i.e. Green Bonds, Blue Bonds, Social Bonds, Sustainability Bonds).

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive

better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as rele-

vant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially

based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment.

DWS Use of Proceed Bond Assessment

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

The sub-fund manager considers in its asset allocation the resulting scores from the investment methodology as detailed above. At least 90% of the sub-fund's assets are invested in issuers that are classified in the highest three scores (scores A-C) of the SDG score from the application of the SDG investment methodology or in Use of Proceeds Bonds according to the DWS Use of Proceeds Bond assessment methodology.

As part of the sub-fund's investment in assets that meet the environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education

- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);

- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the

sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund's investments in asset-backed securities shall be limited to 20% of the sub-fund's net asset value. The term "asset backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return

swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. However, the expected leverage should not be viewed as an additional risk limit for the fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG Corporate Bonds
Legal entity identifier: 25490081R81SN3UWSM78
ISIN: LU2442814435

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics as follows.

I.

On the one hand this [sub-]fund promotes environmental and social characteristics that related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

For such assets this [sub-]fund promotes at the same time a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

II.

On the other hand this [sub-]fund promotes environmental and social characteristics by investing in bonds where the use of proceeds is limited to projects with environmental, climate benefits and/or other sustainability or ESG themed projects (Green Bonds, Blue Bonds, Social Bonds, Sustainability Bonds; further "Use of Proceeds Bonds").

Use of proceeds bonds are devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds is that the issuers of use of proceeds bonds invest the issue proceeds in environmentally and/or socially beneficial projects or activities.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **DWS Use of Proceeds Bond Assessment** is used as indicator for qualifying a bond as use-of-proceeds bond that follows recognized industry standards and to check whether the issuer meets defined ESG criteria
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity (or a Use of Proceeds Bond) contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of the issuer significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the issuer as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?"

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Activities negatively affecting biodiversity-sensitive areas (no. 7);
 - Emissions to water (no. 8);
 - Hazardous waste (no. 9);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

☐ No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporate issuers worldwide that have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (SDG) or that finance special SDG related/themed projects. At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The selection of assets that attain the promoted environmental or social characteristics is conducted either via execution of a dedicated ESG and SDG assessment (as detailed under I.) or via the qualification as Use of Proceeds Bond (as detailed under II.).

In a last step it is further assessed whether the economic activities of an issuer or the Use of Proceeds Bond can be considered as sustainable (as detailed under III.).

I. ESG & SDG assessment methodology

1. ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

2. DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment.

II. DWS Use of Proceeds Bond assessment methodology

The financing of use of proceeds bonds will be assessed via a two stage process.

In a first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles or the ICMA Social Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

The sub-fund manager considers in its asset allocation the resulting scores from the investment methodology as detailed above. At least 90% of the sub-fund’s assets are invested in issuers that are classified in the highest three scores (scores A-C) of the SDG score from the application of the SDG investment methodology or in Use of Proceeds Bonds according to the DWS Use of Proceeds Bond assessment methodology.

III. Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 90% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 15% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 10% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:	0.00%
Fossil gas	
Taxonomy-aligned:	0.00%
Nuclear	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 15%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2442814435/> as well as on your local country website www.dws.com/fundinformation.

Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, LC, TFC, XC	EUR
Front-end load (payable by the investor)	FC, TFC, XC LC	0% up to 5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, TFC LC XC	up to 0.75% up to 1.5% up to 0.35%
Service Fee p.a. (payable by the sub-fund)*	FC, LC, TFC, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, LC, TFC, XC	0.05%
Launch date	FC, LC, TFC, XC	March 31, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest SDG European Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG European Equities is to achieve a positive mid- to long-term investment performance by investing in companies that the sub-fund management considers to be in a position to profit from present or future geopolitical, social and economic trends and themes which have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

At least 80% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to the promoted environmental and social characteristics (ESG assessment methodology) as well as with DWS SDG investment assessment methodology detailed below.

ESG assessment methodology

The sub-fund management seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and

principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment. As

regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by

means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund’s net assets are invested in issuers that are classified in the highest three scores (letter scores “A” to “C”) of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of “D” in the DWS SDG investment assessment are limited to 15% of the sub-fund’s net assets.

Sustainability investment assessment methodology

As part of the sub-fund’s investment in assets that meet the DWS SDG investment assessment methodology as well as the ESG assessment methodology in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action

- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion

strategy for the sub-fund's assets that are aligned with the promoted environmental and social characteristics via the proprietary ESG assessment methodology and DWS SDG investment assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment

limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG European Equities
Legal entity identifier: 254900DDS53YGYIDLG57
ISIN: LU2306834925

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Activities negatively affecting biodiversitysensitive areas (no. 7);
 - Emissions to water (no. 8);
 - Hazardous waste and radioactive waste ratio (no. 9);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as well as the DWS SDG investment assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs. Up to 20% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer. The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter

score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

• **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 10% and the minimum share of socially sustainable investments is 10%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 20% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**

reflecting the share of revenue from green activities of investee companies

- **capital expenditure**

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure**

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 10%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2306834925/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest SDG Global Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI World AC Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest SDG Global Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector. ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG Global Equities is to achieve a positive mid- to long-term investment performance by investing in companies that the sub-fund management considers to be in a position to profit from present or future geopolitical, social and economic trends and themes which have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market

instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 80% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to the promoted environmental and social characteristics (ESG assessment methodology) as well as with DWS SDG investment assessment methodology detailed below.

ESG assessment methodology

The sub-fund management seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's

future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced

labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of “E”) are limited to 5% of the sub-fund’s net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries’ governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors. If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund’s net assets are invested in issuers that are classified in the highest three scores (letter scores “A” to “C”) of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of “D” in the DWS SDG investment assessment are limited to 15% of the sub-fund’s net assets.

Sustainability investment assessment methodology

As part of the sub-fund’s investment in assets that meet the DWS SDG investment assessment methodology as well as the ESG assessment methodology in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with the promoted environmental and social

characteristics via the proprietary ESG assessment methodology and DWS SDG investment assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits

described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG Global Equities

Legal entity identifier: 549300PGPY6VQ5ZNEU06

ISIN: LU1891311356

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer's exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer's exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer's environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer's involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer's involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Activities negatively affecting biodiversitysensitive areas (no. 7);
 - Emissions to water (no. 8);
 - Hazardous waste and radioactive waste ratio (no. 9);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs. Up to 20% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer. The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter

score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

• **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 10% and the minimum share of socially sustainable investments is 10%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 20% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 10%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1891311356/> as well as on your local country website www.dws.com/fundinformation.

Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, NC, FC, LD, IC, ID, PFC, IC50, ID50, TFC, TFD	EUR
Front-end load (payable by the investor)	LC, LD NC FC, IC, ID, PFC, IC50, ID50, TFC, TFD	up to 3% up to 1.5% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LC, LD NC TFC, TFD FC, PFC IC, ID IC50, ID50	up to 0.6% up to 1.1% up to 0.45% up to 0.3% up to 0.25% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	LC, FC, LD, IC, ID, PFC, IC50, ID50, TFC, TFD NC	0% 0.1%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, NC, FC, LD, PFC, TFC, TFD IC, ID, IC50, ID50	0.05% 0.01%
Launch date	LC, NC, FC LD IC, ID, PFC IC50, ID50 TFC, TFD	February 27, 2006 January 31, 2014 October 14, 2016 April 28, 2017 December 5, 2017
Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Short Duration Credit, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Short Duration Credit is to achieve an above-average return for the sub-fund.

The sub-fund's assets may be invested globally in the following instruments:

- corporate bonds issued by companies from Developed Countries or Emerging Markets that may or may not offer an investment grade status at the time of acquisition;
- covered bonds;
- convertible bonds;
- subordinated bonds;
- asset-backed securities.

Furthermore, the sub-fund may invest into money market instruments, deposits with credit institutions and up to 10% in money market funds.

The sub-fund's investments in subordinated bonds shall be limited to 30% of the sub-fund's assets value. The sub-fund's investments in asset backed securities shall be limited to 20% of the sub-fund's net asset value.

A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition.

The average duration of the overall portfolio shall not exceed three years. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on

financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may use, particularly in accordance with the investment limits stated in article 2 B. of the Sales Prospectus – general section, derivatives to optimize the investment objective.

The derivatives may only be used in compliance with the investment policy and the investment objective of DWS Invest Short Duration Credit. The performance of the sub-fund is therefore besides other factors depending on the respective proportion of derivatives, e.g. swaps in the sub-fund's total assets.

To implement the investment policy and achieve the investment objective it is anticipated that the derivatives, such as swaps, will be entered with at least BBB3 (Moody's) /BBB- (S&P, Fitch) rated financial institutions specializing in such transactions. Such OTC-agreements are standardized agreements.

In conjunction with the OTC transactions, it is important to note the associated counterparty risk. The sub-fund's counterparty risk resulting from the use of portfolio total return swaps will be fully collateralized. The use of swaps may furthermore entail specific risks that are explained in the general risk warnings.

The sub-fund can be invested in total or in parts in one or several OTC-transactions negotiated with a counterparty under customary market conditions. Therefore, the sub-fund can be invested in total or in parts in one or several transactions.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG

data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter

score of “E” or “F”) are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2 of the general section of the Sales Prospectus, including the assets mentioned in article 2 A. (j).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Specific risks

The use of credit default swaps may entail greater risks than direct investment in debt securities. The market for credit default swaps can at times be less liquid than the markets for debt securities. The use of swaps may entail specific risks that are explained in more detail in the "Notes" section.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar

weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Short Duration Credit

Legal entity identifier: 549300NH5FB800JT2J63

ISIN: LU0236145453

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets may be invested globally in corporate bonds issued by companies from Developed Countries or Emerging Markets that may or may not offer an investment grade status at the time of acquisition, covered bonds, convertible bonds, subordinated bonds and asset-backed securities. The sub-fund's investments in subordinated bonds shall be limited to 30%. The sub-fund's investments in asset backed securities shall be limited to 20%. The average duration of the overall portfolio shall not exceed three years. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of

“E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 2% and the minimum share of socially sustainable investments is 2%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**

reflecting the share of revenue from green activities of investee companies

- **capital expenditure**

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure**

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		0.00%
Fossil gas		
Taxonomy-aligned:		0.00%
Nuclear		
Taxonomy-aligned (no fossil gas and nuclear)		0.00%
Taxonomy-aligned		0.00%
Non Taxonomy-aligned		100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 2%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 2%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0236145453/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Short Duration Income

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Barclays Global Aggregate 1-3y (hedged EUR), administered by Barclays Bank Plc.
Reference portfolio (risk benchmark)	– (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, IC50, ID50, LC, LD, NC, PFC, TFC, TFD USD FCH, USD LCH, USD TFCH CHF ICH25	EUR USD CHF
Front-end load (payable by the investor)	FC, FD, IC50, ID50, PFC, TFC, TFD, USD FCH, USD TFCH, CHF ICH25 LC, LD, USD LCH NC	0% up to 3% up to 1.5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD, TFC, TFD, USD FCH, USD TFCH IC50, ID50 LC, LD, USD LCH NC PFC CHF ICH25	up to 0.45% up to 0.18% up to 0.6% up to 1.1% up to 0.3% up to 0.23%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, IC50, ID50, LC, LD, NC, PFC, TFC, TFD, USD FCH, CHF ICH25, USD LCH NC	0% 0.2%

Launch date	FC, FD, IC50, ID50, LC, LD, NC, PFC, TFC, TFD, USD FCH, USD LCH, USD TFCH CHF ICH25	October 12, 2020 October 15, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to substantial downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Short Duration Income, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR").

The objective of the investment policy of DWS Invest Short Duration Income is to generate an above-average return for the sub-fund.

The sub-fund may acquire interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend right certificates, money markets instruments and liquid assets.

At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities classified as short-term. "Short term" relates to a term to maturity or fixed-rate term of investments ranging between zero and three years. Furthermore, the sub-fund may invest into money market instruments, deposits with credit institutions and up to 10% in money market funds.

At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months.

This sub-fund does not comply with the provisions of the EU Regulation 2017/1131 on money market funds and hence will not qualify as a money market fund.

A maximum of 30% of the sub-fund's total assets may be invested in debt instruments or other securities that do not meet the above criteria.

No more than 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend right certificates.

The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

At least 90% of the sub-fund's assets will be in EUR or hedged into EUR.

Investments in domestic securities via the Chinese onshore market will be done in listed securities, via direct access to the inter-bank bond market (CIBM) or via Bond Connect. When investing via Bond Connect the investment limit of 10% must be respected.

Due to the fact that investments made by the sub-fund and income received by the sub-fund may be denominated in Renminbi, investors should be aware of a possible depreciation of the Renminbi.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to

greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration.

The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Short Duration Income

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

☐ No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The sub-fund pursues a strategy based on bonds as main investment strategy. The fund may acquire interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend right certificates, money markets instruments and liquid assets. At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities ranging between zero and three years. At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months. No more than 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend right certificates. The sub-fund's investments in asset backed securities and mortgage backed securities shall be limited to 20%. At least 90% of the sub-fund's assets will be in EUR or hedged into EUR. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other

relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons.

Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2220514363/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest StepIn ESG Future Trends

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	1Y: 35% MSCI World + 65% Barc Global Agg Corporates TR EUR 2Y: 65% MSCI World + 35% Barc Global Agg Corporates TR EUR 3Y: 95% MSCI World + 5% Barc Global Agg Corporates TR EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main. A bank business day is any day on which banks are open for business and payments are processed in Luxembourg and Frankfurt/Main.
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest StepIn ESG Future Trends, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest StepIn ESG Future Trends is to generate an above average return for the sub-fund.

The sub-fund is actively managed. The sub-fund is not managed in reference to a benchmark.

In general, the sub-fund will invest globally in fixed income assets such as interest-bearing securities, convertible bonds, money-market instruments, bank balances (the "Fixed Income Assets") as well as equities and/or securities equivalent to equities ("the Equities"). Investment in Fixed Income Assets and Equities shall be mainly held indirectly through investment funds. Derivatives may be used for efficient portfolio management purposes, mainly to hedge foreign currency risks.

At the launch date, the sub-fund's assets shall be predominantly invested in Fixed Income Assets, mainly held through at least six investment funds. The portfolio management intends to decrease the respective proportion of Fixed Income Assets step-by-step over a three-year period and simultaneously increase the respective proportion invested into Equities to at least 90%.

The sub-fund's assets shall be shifted monthly (step-by-step) over a three-year period (the "Shifting Period") into Equities, mainly held through six

investment funds. The portfolio management intends to increase the respective proportion of Equities by 2.5% of the sub-fund's assets with each monthly step (monthly "StepIn").

- After one year, the respective proportion invested into Equities increased to at least 30% of the sub-fund's assets.
- After two years, the respective proportion invested into Equities increased to at least 60% of the sub-fund's assets.
- After three years, the respective proportion invested into Equities increased to at least 90% of the sub-fund's assets. This amount can be further increased to a level of up to 100% of the sub-fund's assets.

In contrast to traditional benchmark-oriented investment funds, the sub-fund management pursues an "Future trends concept" by investing in funds with a focus on companies well positioned to benefit from future trends, such as technological innovation, environmental and social sustainability, impact on SDGs and development of infrastruc-

tures. It is intended to invest in investment funds with different types of thematic focus.

This amount can be further increased to a level of up to 100% of the sub-fund's assets.

The portfolio manager pursues an "Environmental, Social and Corporate Governance (ESG) concept" by investing exclusively in DWS ESG funds.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 10% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 10% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

Contrary to the provision in article 2 B. o) of the general section of the Sales Prospectus the sub-fund may hold up to 10% ancillary liquid assets.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the pro-

moted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed

by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion

strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Notwithstanding article 3.2 (i), the sub-fund may invest up to 100% of the sub-fund’s assets into other funds after the launch and the following applies:

The sub-fund’s assets may be used to acquire shares of other UCITS and/or UCLs as defined in article 3.1 (e), provided that no more than 20% of the sub-fund’s assets are invested in one and the same UCITS and/or UCLs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties. Investments in shares of other UCLs other than UCITS must not exceed 30% of the sub-fund’s net assets in total.

In the case of investments in shares of another UCITS and/or other UCLs, the investments held by that UCITS and/or by other UCLs are not taken into consideration for the purposes of the limits specified in article 3.2 (a), (b), (c), (d), (e) and (f).

The sub-fund’s investments in contingent convertibles shall be limited to 10% of the sub-fund’s net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus

The sub-fund will not invest in ABS or MBS.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

The sub-fund will not invest in target funds where the management fee exceeds a certain level. Specific information on the maximum management fee for this sub-fund can be found in the table.

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest StepIn ESG Future Trends

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="radio"/> No
<div><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __%</div> <div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%</div>	<div><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments</div> <div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input checked="" type="checkbox"/> with a social objective</div> <div><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</div>

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund will invest globally in fixed income assets such as interest-bearing securities, convertible bonds, money-market instruments, bank balances as well as equities and/or securities equivalent to equities. Investments shall be mainly held indirectly through investment funds. The "Future trends concept" is implemented by investing in funds with a focus on companies that are well positioned to benefit from future trends, such as technological innovation, environmental and social sustainability, impact on SDGs and development of infrastructures. It is intended to invest in investment funds with different types of thematic focus. Derivatives may be used for efficient portfolio management purposes, mainly to hedge foreign currency risks. At the launch date, the sub-fund's assets shall be predominantly invested in fixed income assets, mainly held through at least six investment funds. The portfolio management intends to decrease the respective proportion of fixed income assets step-by-step over a three-year period and simultaneously increase the respective proportion invested into equities to at least 90%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed

insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond

assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover

reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest StepIn Global Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	MSCI World TR Net, administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI World TR Net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

Overview of the share classes

Currency of the share class	LC, NC, PFC	EUR
Front-end load (payable by the investor)	LC NC PFC	up to 4% up to 2% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LC NC PFC	up to 1.3% up to 1.7% up to 1.2%
Service Fee p.a. (payable by the sub-fund)*	LC, PFC NC	0% 0.1%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, NC, PFC	0.05%
Launch date	LC, NC, PFC	January 31, 2017
Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest StepIn Global Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest StepIn Global Equities is to generate an above average return for the sub-fund.

The sub-fund will invest in interest-bearing securities, convertible bonds, money-market instruments, bank balances, other low-risk assets, investment funds, equities, securities equivalent to equities and derivatives.

From launch until the date, when the shifting period described below is completed, the following shall apply:

At launch date 90% of the sub-fund's assets are invested in interest-bearing securities, convertible bonds, warrant-linked bonds, investment funds, money market instruments or liquid assets.

Starting at launch date the sub-fund's assets will be shifted monthly step-by-step over a three-year period into instruments with higher yield and higher risk, i.e. mainly equities and equity related securities and its derivatives. After three years the percentage amount invested in those securities can be increased to a level of up to 100%.

Notwithstanding article 2 B. (i) the sub-fund may invest up to 100% of the sub-fund's assets into other funds until 3 years after the launch and the following applies:

The sub-fund's assets may be used to acquire shares of other Undertakings for Collective Investment in Transferable Securities and/or collective investment undertakings as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties. Investments in shares of other collective investment undertakings other than Undertakings for

Collective Investment in Transferable Securities must not exceed 30% of the sub-fund's net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

After the above-mentioned shifting period, the following shall apply:

At least 51% of the sub-fund's assets must be invested in equities of well-established and growth oriented national and international enterprises which, after return expectations or with taking advantage of short-term market movements, have a promising performance or in equity investment funds. The fund management ensures a flexible focus weighting and invests if necessary – for defensive purposes – additionally in Fixed Income Securities.

Up to 49% of the sub-fund's assets may be invested in money market instruments (including investment funds), and deposits with credit institutions, respectively. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's

future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribu-

tion of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles.

The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via

the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in

order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest StepIn Global Equities

Legal entity identifier: 549300CRHOIRRD0B5P81

ISIN: LU1532502512

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund will invest in interest-bearing securities, convertible bonds, money-market instruments, bank balances, other low-risk assets, investment funds, equities, securities equivalent to equities and derivatives. At launch date 90% of the sub-fund's assets are invested in interest-bearing securities, convertible bonds, warrant-linked bonds, investment funds, money market instruments or liquid assets. Starting at launch date the sub-fund's assets will be shifted monthly step-by-step over a three-year period into instruments with higher yield and higher risk, i.e. mainly equities and equity related securities and its derivatives. After three years the percentage amount invested in those securities can be increased to a level of up to 100%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or

“F”),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/balanced-funds/LU1532502512/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Top Asia

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investments Hong Kong Limited, Level 60, International Commerce Centre, 1 Austin Road West, Kowloon, Hong Kong.
Performance benchmark	MSCI AC Asia ex Japan EUR Nt Index (MAASJ Index), administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI AC Asia ex Japan EUR Nt Index (MAASJ Index)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg that is also an exchange trading day on the Hong Kong Stock Exchange
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, LD, NC, FC, TFC, TFD USD LC, USD FC, USD TFC GBP D RD	EUR USD GBP

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Top Asia, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Top Asia is to achieve as high an appreciation as possible of capital invested in Euros. The sub-fund may acquire equities, interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates and equity warrants. At least 70% of the sub-fund's assets are invested in equities of companies having their registered offices or principal business activity in Asia (ex Japan).

A company is viewed as having its principal business activity in Asia (ex. Japan) if the greatest part of its earnings or revenues is generated there. Considered as Asian (ex Japan) issuers are companies having their registered offices or principal business activity in Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and the People's Republic of China. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public. The following aspects shall be considered when selecting equities:

- strong market position of an issuer in its field of business;
- financial ratios that are sound for the circumstances;
- better-than-average corporate management that is focused on achieving solid long-term earnings;
- strategic orientation of the company;
- shareholder-centred information policies.

Accordingly, the sub-fund acquires equities of companies it expects to achieve results and/or share prices that are above average with respect to the broad market.

A maximum of 30% of the sub-fund's assets (after deduction of liquid assets) may be invested in equities of foreign and domestic issuers that do not satisfy the requirements of the preceding sentence.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics

as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 3% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other Undertakings for Collective Investment in Securities and/or other collective investment undertakings as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

The following investment restriction applies to the sub-fund due to a possible registration in Korea:

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union

or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The sub-fund must invest more than 70% of the net assets in non-Korean Won-denominated assets.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may

lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Specific risks

Because the sub-fund is specialized on a specific geographic area, it presents increased opportunities, but these opportunities are countered by equally elevated risks.

The sub-fund is focused on investments in Asia. Asian exchanges and markets are sometimes subject to substantial fluctuations. Fluctuations in the rate of exchange of the local currencies against the euro can also impact on investment performance. The credit risk associated with an investment in securities, i.e., the risk of a decline in the assets of issuers, cannot be entirely eliminated even by the most careful selection of the instruments to be purchased. Political changes, restrictions on currency exchange, exchange monitoring, taxes, limitations on foreign capital investments and capital repatriation etc. can also affect investment performance.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Top Asia

Legal entity identifier: 549300PS13LX4PXITZ33

ISIN: LU0145648290

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 3% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in equities of companies having their registered offices or principal business activity in Asia (ex Japan). Up to 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers

that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 3% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**

reflecting the share of revenue from green activities of investee companies

- **capital expenditure**

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure**

(OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0145648290/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Top Dividend

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	MSCI WORLD HIGH DIVIDEND YIELD
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Dilution adjustment (payable by the shareholder)**	PFC and PFD: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC and PFD: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Top Dividend, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR").

The objective of the investment policy of DWS Invest Top Dividend is to achieve an above average return.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of international issuers that are expected to deliver an above-average dividend yield.

When selecting equities, the following criteria shall be of decisive importance: dividend yield above the market average; sustainability of dividend yield and growth; historical and future earnings growth; price/earnings ratio. In addition to these criteria, the proven stock-picking process of the Fund Manager will be applied. This means that a company's fundamental data, such as asset quality, management skills, profitability, competitive position and valuation, are analysed. These criteria may be weighted differently and do not always have to be present at the same time.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use derivative techniques to implement the investment objective, including in particular – but not limited to – forwards, futures, single-stock-futures, options or equity swaps.

Against this background, positions could be built up that anticipate declining stock prices and index levels.

According to the prohibition stipulated in article 2 F. of the general section of the Sales Prospectus, no short sales of securities will be undertaken. Short positions are achieved by using securitized and non-securitized derivative instruments.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

Up to 30% of the sub-fund's assets may be invested in instruments that do not meet the above-mentioned criteria.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market

instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 A. (j) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is

eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Top Dividend
Legal entity identifier: 5493003XYDKBDCH55556
ISIN: LU0507265923

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> Yes</div>	<div><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="radio"/> No</div>

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:
- Carbon footprint (no. 2);
 - GHG intensity of investee companies (no. 3);
 - Exposure to companies active in the fossil fuel sector (no. 4);
 - Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
 - Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

☐ No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in equities of international issuers that are expected to deliver an above-average dividend yield. When selecting equities, the following criteria shall be of decisive importance: dividend yield above the market average, sustainability of dividend yield and growth, historical and future earnings growth as well as price/earnings ratio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation. Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned:	0.00%
Fossil gas	
■ Taxonomy-aligned:	0.00%
Nuclear	
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned:	0.00%
Fossil gas	
■ Taxonomy-aligned:	0.00%
Nuclear	
■ Taxonomy-aligned (no fossil gas and nuclear)	0.00%
■ Taxonomy-aligned	0.00%
■ Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0507265923/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest USD High Yield Corporates

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investment Management Americas Inc., 345 Park Avenue, New York, NY 10154, United States of America
Performance benchmark	ICE BoAML US HY Constrained, administrated by ICE Data Indices, LLC.
Reference portfolio (risk benchmark)	ICE BoAML US HY Constrained
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest USD High Yield Corporates, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest USD High Yield Corporates is to generate an above-average return for the sub-fund.

At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status. Non-investment grade

encompasses BB+ and below rated bonds, including bonds with D rating and non-rated bonds.

In case of a split rating involving three rating agencies, the second best will prevail. If a security is rated by only two agencies, the lower of the two ratings will be used for the rating classification. If a security only has one rating, the single rating will be used. If there is no official rating, an internal rating will be applied in accordance with DWS internal guidelines.

Up to 30% of the sub-fund's assets may be invested in corporate bonds that do not meet the above-mentioned criteria.

The sub-fund manager aims to hedge any currency risk versus the USD in the portfolio.

In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund

manager may also participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These invest-

ments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

In extreme market situations, the Portfolio Manager may diverge from the above investment strategy to avoid a liquidity squeeze. Up to 100% of the sub-fund's assets may temporarily be invested in interest-bearing debt securities and money market instruments permissible under Directive 2009/65/EC of the European Parliament and of the Council of July 13, 2009, on the coordination of laws, regulations and administrative provisions relating to undertakings for collective investment in transferable securities (UCITS).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional amounts of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest USD High Yield Corporates

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: __%

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

- X** Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Up to 10% of the sub-fund's assets may be invested into listed or non-listed equities in the due course of a re-structuring of fixed income instruments. The sub-fund's investments in contingent convertibles shall be limited to 10%. Currency risks versus the USD in the portfolio shall be hedged.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above. Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that are not compliant with the EU taxonomy is 1% and the minimum share of socially sustainable investments is 1%. The actual share of sustainable investments with an environmental objective that is not compliant with the EU taxonomy, and of socially sustainable investments, depends on the market situation and the investable investment universe.

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy¹ related activities that comply with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The sub-fund does not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it may occur that as part of the investment strategy the sub-fund also invests in issuers that are also active in these areas. Further information on such investments, where relevant, will be disclosed in the annual report.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

2. Taxonomy-alignment of investments excluding sovereign bonds*

Taxonomy-aligned:		
Fossil gas	0.00%	
Taxonomy-aligned:		
Nuclear	0.00%	
Taxonomy-aligned (no fossil gas and nuclear)	0.00%	
Taxonomy-aligned	0.00%	
Non Taxonomy-aligned	100.00%	

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments is 1%.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.
