JPMorgan Funds	ISIN: LU0875418518
JPM Diversified Risk I (acc) - USD	
a Share Class of JPMorgan Funds – Diversified Risk Fund. The management company is JPMorgan Asset Management (Europe) S.à r.l.	

Objectives, Process and Policies

INVESTMENT OBJECTIVE

To provide long-term capital growth by investing in multiple asset classes, globally, using a risk-weighted approach to asset allocation, using derivatives where appropriate.

INVESTMENT PROCESS

Investment approach

- Systematic approach that provides long/short exposure to a diversified range of risk premia, across asset classes.
- Portfolio targets equally weighted long-term risk exposures to various risk premia, grouped into four styles: quality, carry, momentum and value.
- Overall portfolio is constructed to maintain a low correlation to traditional markets.

Benchmark uses and resemblance

- Performance comparison.
- The Sub-Fund is actively managed without reference or constraints relative to its benchmark.

POLICIES

Main investment exposure The majority of assets invested, either directly or through derivatives, in equities (including smaller companies), convertible securities, debt securities and currencies. The Sub-Fund may also gain exposure to commodities through equities, UCITS, UCIs, ETFs or derivatives on commodity indices. Issuers can be from anywhere in the world, including emerging markets. The Sub-Fund may invest in below investment grade and unrated debt securities.

The Sub-Fund may have net long and net short exposure (achieved through derivatives) to sectors, markets and currencies, however, it will maintain a total net long market exposure at all times. The Sub-Fund may hold up to 100% of its assets in Deposits with Credit Institutions, money market instruments and money market funds either as collateral for derivatives or until suitable investment opportunities are found.

The Sub-Fund allocates its assets to gain exposure to a range of risk premia using a systematic long/short investment approach. The range of risk premia may include equity value (long equities that are relatively less expensive, short equities that are relatively more expensive); equity quality (long equities of higher quality companies, based on metrics such as profitability, against short exposures to those relatively with lower quality); FX carry (long exposure to currencies with higher yields and short exposures to lower yielding currencies); fixed income momentum (long exposure to bonds with positive price movements,

short exposures to those with negative price returns). Allocation to risk premia can vary depending on market opportunities. Exposure to each of the risk premia styles will contribute to the level of leverage to varying degrees depending on its allocation within the portfolio at any given time and the actual levels of leverage can fluctuate significantly. The expected level of leverage of 600%, is representative of the typical level of leverage and is mainly attributed to the use of fixed income futures and swaps (including interest rate swaps and total return swaps) and currency forwards. These instruments can have high notional values which increase the expected level of leverage. Leverage may significantly exceed the expected level from time to time when the Sub-Fund has a greater allocation to a risk premia style which uses techniques (such as fixed income momentum and relative value) which are implemented through derivatives that have high notional values or on a temporary basis prior to the expiry of currency forward contracts.

The expected leverage is calculated as the "sum of the notionals" without any netting of opposing positions. As the leverage calculation considers neither sensitivity to market movements nor whether it increases or decreases the overall Sub-Fund risk, it may not be representative of the actual investment risk level within the Sub-Fund.

Other investment exposures Up to 20% of net assets in Ancillary Liquid Assets for managing cash subscriptions and redemptions as well as current and exceptional payments. Up to 100% of net assets in Ancillary Liquid Assets for defensive purposes on a temporary basis, if justified by exceptionally unfavourable market conditions.

Derivatives Used for: investment purposes; hedging; efficient portfolio management. Types: see [Sub-Fund Derivatives Usage](#) table under [How the Sub-Funds Use Derivatives, Instruments and Techniques](#) in the Prospectus. TRS including CFD: 90% expected; 150% maximum. Global exposure calculation method: absolute VaR. Expected level of leverage from derivatives: 600% indicative only. Leverage may significantly exceed this level from time to time.

Currencies Sub-Fund Base Currency: USD. Currencies of asset denomination: any. Hedging approach: primarily hedged to Base Currency.

Redemption and Dealing Shares of the Sub-Fund may be redeemed on demand, with dealing normally on a daily basis.

Distribution Policy This Share Class does not pay dividends. Earned income is retained in the NAV.

Risk and Reward Profile

The above rating is based on the historic volatility of the simulated Net Asset Value of the Share Class over the last five years and the volatility which is consistent with the risk limit of the Sub-Fund.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 4 because its simulated Net Asset Value has shown medium fluctuations historically and this category is consistent with the risk limit of the Sub-Fund.
