Fund description

Investment objective and overview

The investment objective of the Fund is to achieve long-term income and capital gain in Euro, by investing in Impact Bonds with a positive environmental or social impact. The Fund seeks to achieve this objective through investment principally in such Impact Bonds issued by companies in the financial sector which aim to generate social and/or environmental impact alongside a financial return. The Fund may invest in income bearing or accruing securities with fixed principal amounts including government bonds, corporate bonds, junior debt securities, preferred Shares, convertible securities and contingent capital notes, provided such fulfil the definition of an Impact Bond. The Impact Bonds to which the Fund will allocate will follow either the ICMA's principles (<https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/>), or equivalent standards determined by the Delegate Investment Manager to be appropriate and of an equally high standard.

Opportunities

The Fund will not invest more than 20% in unrated securities which may include below investment grade.  
The Fund is actively managed and it does not refer to any benchmark index.

Risk factors

**Capital at Risk:** all financial investments involve an element of risk. Therefore, the value of the investment and the income from it will vary and the initial investment amount cannot be guaranteed.

**Concentration Risk:** concentration in a limited number of securities and industry sectors may result in more volatility than investing in broadly diversified funds.

**Credit Risk / Debt Securities:** bonds may be subject to significant fluctuations in value. Bonds are subject to credit risk and interest rate risk.

**Credit Risk / Non-Investment Grade:** non-investment grade securities, which will generally pay higher yields than more highly rated securities, will be subject to greater market and credit risk, affecting the performance of the Fund.

**Currency Risk - Non Base Currency Share Class:** non-base currency share classes may or may not be hedged to the base currency of the Fund. Changes in exchange rates will have an impact on the value of shares in the Fund which are not denominated in the base currency. Where hedging strategies are employed, they may not be fully effective.

**Interest Rate Risk:** a rise or fall in interest rates causes fluctuations in the value of fixed income securities, which may result in a decline or an increase in the value of such investments.

**Liquidity Risk:** some investments can be difficult to sell quickly which may affect the value of the Fund and, in extreme market conditions, its ability to meet redemption requests.

**List Not Exhaustive:** This list of risk factors is not exhaustive. Please refer to the relevant Fund's Prospectus.

**Past performance is not an indicator of future performance and current or future trends.** The performance values refer to the net asset value and are calculated without the commission and costs incurred on issue, redemption or swapping (e.g. transaction and custody costs of the investor). The fund does not include the security of capital which is characteristic of a deposit with a bank or building society. The indications are based on figures denominated in CHF. If this currency is different from the currency of the country in which the investor is resident, the return may increase or decrease as a result of currency fluctuations. Indices cannot be purchased directly.

**Before subscribing, please read the prospectus and the KIID which are available at [www.gam.com](http://www.gam.com) or from your distributor.**

Average company-issuer rating: If a guarantee is in place, the composite rating relates to the guarantor. Otherwise, the composite rating of the parent or ultra-parent is used.

## Glossary

**Average company-issuer rating:** is a forward-looking opinion about an obligor's overall creditworthiness and their capacity and willingness to meet its financial commitments.

**Average coupon:** is the average yield paid by a fixed-income security. The coupon rate is the yield the bond paid on its issue date.

**Average security rating:** is forward-looking opinion about an obligor's overall creditworthiness with respect to a specific security obligation.

**Modified duration:** a risk indicator that measures the effect of price fluctuations on a bond issue or a portfolio of bond issues.

**Ongoing charge:** the ongoing charge is a measure of the annual expenses incurred by a fund and is expressed as a percentage. It allows an accurate comparison of the costs of funds from different companies to be made.

**Risk rating:** The summary risk indicator is a combination of a market risk measure and credit risk measure. The market risk measure is based on an annualized volatility measure, calculated over the last 5 years of history if available. Where 5 years' performance history is not available the data is supplemented by proxy fund, benchmark data or a simulated historical series as appropriate. This profile is determined using historical data, as such may not be a reliable indication for the future risk profile. The credit risk measure is assessing credit and concentration risk within the portfolio. The indicators are not guaranteed and may shift over time. The lowest category does not mean 'risk free'.

**Yield to maturity (%):** the yield to maturity is the average yield generated by an investment each year if it is held until expiry.
