Past performance does not predict future returns.

Reference Index key features

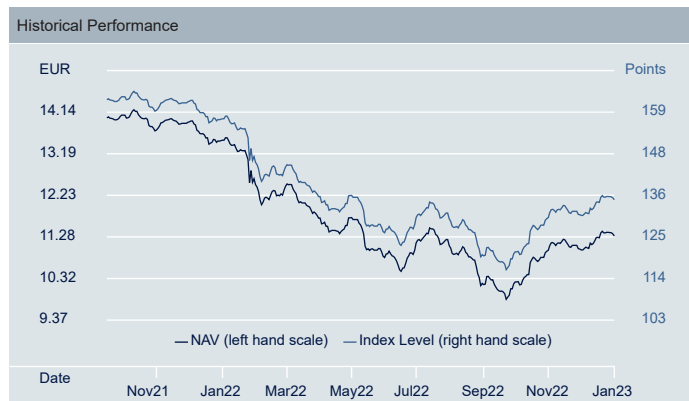

The FTSE Emerging Markets USD Government and Government-Related Bond Select Index aims to reflect the performance of the following market:

- USD denominated bonds issued by the sovereigns and quasi-sovereigns from Emerging Market countries
- A country is considered as emerging if 1) it is classified by the International Monetary Fund World Economic Outlook as one of the "emerging and developing economies" OR if it is classified by the World Bank as one of the "low-income economies" or "lower-middle-income economies" or "upper-middle-income economies" AND 2) it has a GNI per capita below twice the World Bank "high-income economies" threshold
- Exposure across the whole yield curve (minimum time to maturity of 2 years, 3 years at inclusion)
- Minimum rating of C (exclusion of defaulted bonds)
- Minimum amount outstanding of USD 1 billion
- Cap on the maximum par amount considered per country of USD 25 billion

Additional information on the Index and the general methodology behind this FTSE index can be found on the index website (<https://www.yieldbook.com/>).

Key Risks

- **The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss.**
- The Fund will use financial contracts (known as derivatives) to try to reduce the effect of currency fluctuations between the currency of its assets and the currency of the shares. This may not be effective and may prevent the Fund from benefitting from an increase in value of (or expose a Fund to the decrease in value of) a particular currency.
- Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment.
- The Fund invests in non-investment grade bonds which generally have a higher risk of default and are more susceptible to market fluctuations. This could adversely affect the value of your investment.
