UBAM - Bell US Equity, a sub-fund of UBAM

Class: UHC EUR (Capitalisation) LU1704638110

UBAM is a SICAV managed by UBP Asset Management (Europe) S.A.

Objectives and investment policy

The Fund seeks to grow capital and generate income by investing primarily in growth-oriented US equities or equivalent.

The Fund is actively managed, investing at least 80% of its net assets in US companies with a minimum market capitalization of USD 1 billion and up to 20% of its net assets in non-US companies carrying a substantial part of their commercial activity in the US with a minimum market capitalization of USD 5 billion.

The Fund focuses on long-term growth, with an emphasis on the sustainability and quality of that growth rather than shorter-term or cyclical events.

A performance fee in reference to the S&P 500 Index (the "Benchmark") is applied to some share classes. The Benchmark is not representative of the risk profile of the Fund. The performance of the Fund is likely to be significantly different from that of the Benchmark because the Investment Manager has significant discretion to deviate from its securities and weighting.

The Fund's value is calculated and expressed in US Dollars.

The currency risk in relation to the base currency USD is mainly hedged.

Investors in the Fund can subscribe and redeem units on any business day in Luxembourg except days where the decisive market is closed: United States (US).

Details of the closing days are available here:

<https://www.ubp.com/en/our-offices/ubp-asset-management-europe-sa>.

The recommended holding period is minimum five years.

As an equity fund, its holdings can move in line with or return less than the broad stock market, so investors should be aware that the value of their holdings could fall and that they may not get back their initial investment.

Any income received by the Fund is reinvested (capitalisation share class).

Risk and reward profile

This indicator represents the annual historical volatility of the Fund over a 5-year period.

Risk category 6 reflects a very high potential gain and/or loss in the value of the portfolio.

This is due to investments in equities on the US market.

Historical data such as that used to calculate the synthetic indicator cannot be considered as a reliable indication of the Fund's future risk profile.

The risk category associated with the Fund is not guaranteed and may change over time.

The lowest risk category does not mean "risk free".

Your initial investment is not guaranteed.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Counterparty risk: As the Fund uses over-the-counter derivatives, there is a risk that the counterparty to the transactions will wholly or partially fail to honour its contractual obligations. This may result in a financial loss to the Fund.

Currency risk: The Fund invests in overseas markets. It can be affected by changes in exchange rates which may cause the value of your investment to decrease or increase.

Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.

Full details of risks are disclosed in the chapter "Risk Factors" in the prospectus.
