FIDELITY FUNDS

Global Multi Asset Dynamic Fund I-ACC-Euro

31.07.2023 Monthly Factsheet

Marketing Communication

Strategy

The fund is a growth-oriented multi-asset strategy, aiming to deliver long-term capital growth across market cycles using a dynamic, diversified and drawdown-aware approach. The fund seeks to generate growth from a diverse range of asset classes and return sources, investing in a range of equity, fixed income and alternative assets and actively managed strategies. The fund's asset allocation is dynamically adjusted in a flexible approach to navigate through market cycles, where the team combines top-down macro insights with bottom-up micro intelligence to make tactical asset allocation decisions. Dynamic asset allocation is used to capture upside potential whilst managing downside risk, incorporating a broad range of inputs including quantitative signals and qualitative insights.

Objectives & Investment Policy

Objective: The fund aims to achieve capital growth over the long term .
Investment Policy: The fund invests in a range of asset classes including equities, corporate and government bonds, commodities, money market instruments and eligible REITs form anywhere in the world, including emerging markets.

For more information, see "Sustainable Investing and ESG Integration".
Derivatives and Techniques: The fund may use derivatives for hedging, efficient portfolio management and investment purposes.
Benchmark: 75% MSCI ACWI Index; 25% Bloomberg Global Aggregate Index, indices that do not take into account ESG characteristics. Used for: performance comparison only.

Fund Facts

Launch date: 31.12.97
Portfolio manager: Pek Ng, Sarah Jane Cawthray
Appointed to fund: 10.03.21, 03.05.21
Years at Fidelity: 27, 6
Fund size: € 140m
Fund reference currency: US Dollar (USD)
Fund domicile: Luxembourg
Fund legal structure: SICAV
Management company: FIL Investment Management (Luxembourg) S.A.
Capital guarantee: No

Share Class Facts

Other share classes may be available. Please refer to the prospectus for more details.

Launch date: 23.03.22
NAV price in share class currency: 9.43
ISIN: LU2458294183
SEDOL: BPQY4L9
WKN: A3DHV4
Bloomberg: FIMADIE LX
Distribution type: Accumulating
Ongoing Charges Figure (OCF) per year: 0.78% (30.04.23)
OCF takes into account annual management charge per year: 0.63%

Risk Indicator

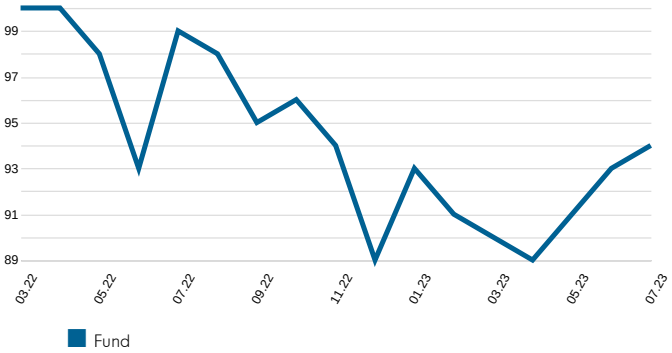

The risk indicator assumes you keep the product for 2 years. The actual risk can vary significantly if you cash in at the early stage and you may get back less.
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity to pay you. Returns may increase or decrease as a result of currency fluctuations. This product does not include any protection from future market performance so you could lose some or all of your investment. If FIL Investment Management (Luxembourg) S.A. is not able to pay you what is owed, you could lose your entire investment.

Important Information

The value of your investment may fall as well as rise and you may get back less than you originally invested. The use of financial derivative instruments may result in increased gains or losses within the fund. There is a risk that the issuers of bonds may not be able to repay the money they have borrowed or make interest payments. When interest rates rise, bonds may fall in value. Rising interest rates may cause the value of your investment to fall. Funds are subject to charges and expenses. Charges and expenses reduce the potential growth of your investment. This means you could get back less than you paid in. The costs may increase or decrease as a result of currency and exchange rate fluctuations. Please refer to the Prospectus and KID of the fund before making any final investment decisions. When referring to sustainability-related aspects of a promoted fund, the decision to invest should take into account all characteristics or objectives of the promoted fund as detailed in the prospectus.

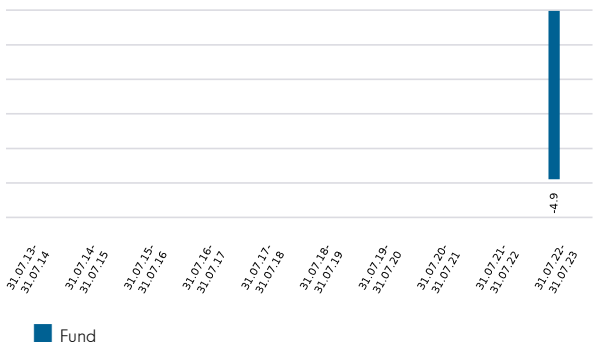

This share class may only be acquired by institutional investors and is not available to retail investors.
Past performance does not predict future returns. The fund's returns may increase or decrease as a result of currency fluctuations. The investment which is promoted concerns the acquisition of units or shares in a fund, and not in a given underlying asset owned by the fund.

Cumulative performance in EUR (rebased to 100)

Performance is shown for the last five years (or since launch for funds launched within that period).

Performance for 12 month periods in EUR (%)

Performance to 31.07.23 in EUR (%)

	1m	3m	YTD	1yr	3yr	5yr	Since 23.03.22*
Fund cumulative growth	1.8	5.9	5.7	-4.9	-	-	-5.7
Fund annualised growth	-	-	-	-4.9	-	-	-4.2

Source of fund performance and volatility and risk measures is Fidelity. Performance is excluding initial charge. Basis: nav-nav with income reinvested, in EUR, net of fees. If you took an initial charge of 5.25% from an investment, this is the equivalent of reducing a growth rate of 6% per annum over 5 years to 4.9%. This is the highest initial charge applicable, if the initial charge you pay is less than 5.25%, the impact on the overall performance will be less. Market indices are sourced from RIMES and other data is sourced from third-party providers such as Morningstar.
*Performance commencement date.

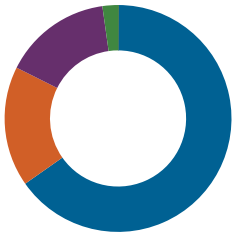

Introduction

This factsheet contains information about the composition of the fund at a particular point in time. It aims to help you understand how the fund manager is positioned to achieve the fund's objectives.

The asset class breakdown displays the totals for investments (which could include derivatives) in each category. Where derivatives are held, their contribution to the total is included on an exposure basis – ie an amount equivalent to the value that would have been invested in a fund to produce an equivalent holding. Where derivatives are used they may cause fund totals to exceed 100% (although very minor differences could be attributable to rounding).

The Top Allocations table provides the next level of detail, showing the manager's choice of investment disciplines, funds or other holdings across the sub asset classes. It includes cash held as a strategic investment. Investment disciplines includes the use of "pools". For internal management purposes, Fidelity forms "pools" to co-manage assets from different funds. (These pools are not directly available to customers and do not constitute separate entities.)

Breakdown by Asset Class (% TNA)

Equities	78.8
Bonds	20.7
Cash and Other Strategies	18.6
Alternatives	2.8
Uninvested Cash & Other	0.0

Top Allocations (% TNA)

Allocation	Sub-Asset Class	% TNA

Glossary / additional notes

Volatility & Risk

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk. The calculation is the standard deviation of 36 monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

Relative volatility: a ratio calculated by comparing the annualised volatility of a fund to the annualised volatility of a comparative market index. A value greater than 1 indicates the fund has been more volatile than the index. A value less than 1 shows the fund has been less volatile than the index. A relative volatility of 1.2 means the fund has been 20% more volatile than the index, while a measure of 0.8 would mean the fund has been 20% less volatile than the index.

Sharpe ratio: a measure of a fund's risk-adjusted performance, taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate. The ratio is calculated by subtracting the risk-free return (such as cash) in the relevant currency from the fund's return, then dividing the result by the fund's volatility. It is calculated using annualised numbers.

Annualised alpha: the difference between a fund's expected return (based on its beta) and the fund's actual return. A fund with a positive alpha has delivered more return than would be expected given its beta.

Beta: a measure of a fund's sensitivity to market movements (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Annualised tracking error: a measure showing how closely a fund follows the index to which it is being compared. It is the standard deviation of the fund's excess returns. The higher the fund's tracking error, the higher the variability of fund returns around the market index.

Information ratio: a measure of a fund's effectiveness in generating excess return for the level of risk taken. An information ratio of 0.5 shows the fund has delivered an annualised excess return equivalent to half the value of the tracking error. The ratio is calculated by taking the fund's annualised excess return and dividing it by the fund's tracking error.

R^2: a measure representing the degree to which a fund's return can be explained by the returns of a comparative market index. A value of 1 signifies the fund and index are perfectly correlated. A measure of 0.5 means only 50% of the fund's performance can be explained by the index. If the R2 is 0.5 or lower, the fund's beta (and therefore its alpha too) is not a reliable measure (due to a low correlation between fund and index).

Ongoing charges
The ongoing charges figure represents the charges taken from the fund over a year. It is calculated at the fund's financial year end and may vary from year to year. For classes of funds with fixed ongoing charges, this may not vary from year to year. For new classes of funds or classes undergoing corporate actions (eg amendment to annual management charge), the ongoing charges figure is estimated until the criteria are met for an actual ongoing charges figure to be published.
The types of charges included in the ongoing charges figure are management fees, administration fees, custodian and depositary fees and transaction charges, shareholder reporting costs, regulatory registration fees, Directors fees (where applicable) and bank charges.
It excludes: performance fees (where applicable); portfolio transaction costs, except in the case of an entry/exit charge paid by the fund when buying or selling units in another collective investment undertaking.
For more information about charges (including details of the fund's financial year end), please consult the charges section in the most recent Prospectus.

Historic yield
The historic yield for a fund is based on its dividends declared over the preceding 12 months. It is calculated by summing the dividend rates declared in that period, divided by the price as at the date of publication. Declared dividends may not be confirmed and may be subject to change. Where 12 months of declared dividend data does not exist a historic yield will not be published.

Sector/industry classification

GICS: The Global Industry Classification Standard is a taxonomy mainly used across MSCI and S&P indices in which each company is assigned by its principal business activity to one of 11 sectors, 24 industry groups, 69 industries and 158 sub-industries. More information is available at http://www.msci.com/gics

ICB: The Industry Classification Benchmark is a taxonomy mainly used across FTSE Russell indices in which each company is assigned by its principal business activity to one of 11 industries, 20 supersectors, 45 sectors and 173 subsectors. More information is available at https://www.ftserussell.com/data/industry-classification-benchmark-icb

TOPIX: Tokyo stock Price Index, commonly known as TOPIX, is a stock market index for the Tokyo Stock Exchange (TSE) in Japan, tracking all domestic companies of the exchange's First Section. It is calculated and published by the TSE.

IPD means the Investment Property Databank who are a provider of performance analysis and benchmarking services for investors in real estate. IPD UK Pooled Property Funds Index – All Balanced Funds is a component of the IPD Pooled Funds Indices which is published quarterly by IPD.

Independent Assessment

Scope Fund Rating: The rating measures how well a fund has balanced risk and reward relative to its peers. The rating is based solely on performance for funds with a five year track record. Funds with a shorter history also undergo qualitative assessment. For example, this may include looking at management style. The rating scale is A = very good, B = good, C = average, D = below average and E = poor.

Morningstar Star Rating for Funds: The rating measures how well a fund has balanced risk and reward relative to its peers. Star ratings are strictly based on past performance and Morningstar suggests investors use them to identify funds that are worthy for further research. The top 10% of funds in a category will receive a 5-star rating and the next 22.5% receive a 4-star rating. Only ratings of 4 or 5 stars are displayed on the factsheet.

Primary share class: is identified by Morningstar when the analysis calls for only one share class per fund to be in the peer group. It is the share class Morningstar recommends as the best proxy for the portfolio for the relevant market and category/GIF combination. In most cases the share class chosen will be the most retail version (based upon actual management charge, inception date, distribution status, currency and other factors) unless a share class that is less retailed focused has a much longer track record. It is different to the oldest share class data point in that it is on an available for sale level and not all markets will have the oldest share class for sale in that region. The Primary share class is also based on category so each available for sale/category combination for the fund will have its own primary share class.

Important Information

This is a marketing communication. This information must not be reproduced or circulated without prior permission.

Fidelity only offers information on products and services and does not provide investment advice based on individual circumstances, other than when specifically stipulated by an appropriately authorised firm, in a formal communication with the client.

Fidelity International refers to the group of companies which form the global investment management organisation that provides information on products and services in designated jurisdictions outside of North America. This communication is not directed at, and must not be acted upon by persons inside the United States and is otherwise only directed at persons residing in jurisdictions where the relevant funds are authorised for distribution or where no such authorisation is required.

Unless otherwise stated all products are provided by Fidelity International, and all views expressed are those of Fidelity International. Fidelity, Fidelity International, the Fidelity International logo and F symbol are registered trademarks of FIL Limited. FIL Limited assets and resources as at 28/02/2023 - data is unaudited. Research professionals include both analysts and associates. The performance figures shown do not take into account the fund's Initial Charge. If you took an initial charge of 5.25% from an investment, this is the equivalent of reducing a growth rate of 6% per annum over 5 years to 4.9%. This is the highest initial charge applicable, if the initial charge you pay is less than 5.25%, the impact on the overall performance will be less.

Fidelity Funds "FF" is an open-ended investment company (UCITS) established in Luxembourg with different classes of shares. FIL Investment Management (Luxembourg) S.A. reserves the right to terminate the arrangements made for the marketing of the sub-fund and/ or its shares in accordance with Article 93a of Directive 2009/65/EC and Article 32a of Directive 2011/61/EU. Prior notice of this cessation will be made in Luxembourg.
