

# BlueBay Investment Grade Global Aggregate Bond Fund

## Investment objective

The fund is actively managed and targets better returns than its benchmark, the Bloomberg Global Aggregate Bond Index USD unhedged, while taking into account Environmental, Social and Governance ("ESG") considerations.

## Investment strategy

- There are no restrictions on the extent to which the fund's portfolio and performance may deviate from the ones of the benchmark.
- At least two-thirds of the fund's investments will be in fixed rate and floating rate fixed income bonds rated investment grade issued by sovereign and corporate entities globally (including Emerging Market Issuers).
- Up to 15% of the fund's assets may be invested in fixed income bonds rated below investment grade, provided that such bonds are not rated below B-/B3.
- The fund may invest up to 20% of its net assets in mainland China.
- The Fund meets the conditions set out in Article 8 of the Sustainable Finance Disclosure Regulation as it promotes environmental/social characteristics through binding requirements as a key feature. ## Contributors

- Long sovereign beta
- Long sovereign alpha: Romania and Mexico
- Long banks and supranationals
- CDS index hedges

## Detractors

- Duration: short UK and Japan and long South Africa
- Underweight corporate spread duration
- Emerging-market (EM) and developed-market foreign exchange

## Outlook

- We feel the Federal Reserve (Fed) is keen to cut rates if data allows, but still believe we are likely to see only one or two US rate cuts this year, unless the pace of economic activity cools notably.
- Slower growth and inflation in Europe may mean the European Central Bank starts cutting before the Fed. We believe the rates trajectory could be more important to markets than the timing of the first cut.
- Bund and US Treasury yields look fair for now, but shifting expectations on the path for rates will likely see periods of volatility so our risk-taking here will probably be more tactical and two-way in nature.
- We retain a short duration bias in both the UK and Japan.
- We retain modest exposure to Mexico and South Africa, and added Brazil.
- In sovereign credit, we currently have no firm views on the European periphery. In EM sovereigns, we are constructive on select stable BBB names.
- We maintain a modestly constructive view on corporates, reflecting solid underlying technicals.

**Past performance does not predict future returns.** The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation. Fees and other expenses will have a negative effect on investment returns. Performance shown for 1 year periods onwards are annualised figures.

## Important risk considerations

- At times, the market for investment grade bonds may dry up, which could make it difficult to see these bonds, or the fund may only be able to sell them at a discount.
- There may be cases where an organisation with which we trade assets or derivatives (usually a financial institution such as a bank) may be unable to fulfill its obligations, which could cause losses to the fund.
- RBC BlueBay's ESG analysis can rely on input from external providers. Such data may be inaccurate or incomplete or unavailable and BlueBay could assess the ESG risks of securities held incorrectly.
- RBC BlueBay could suffer from a failure of its processes, systems, and controls - or from such a failure at an organisation on which we rely in order to deliver our services - which could lead to losses for the fund.

## Notes

- While gross of fees figures would reflect the reinvestment of all dividends and earnings, it would not reflect the deduction of investment management and performance fees. An investor's returns will be reduced by the deduction of applicable fees which will vary with the rate of return on the strategy. For example, if there was an annualised return of 10% over a 5-year period then the compounding effect of a 0.60% management fee and a 0.20% performance fee would reduced the annualised return to 9.32% (figures used are only to demonstrate the effect of charges are not an indicator of future performance). In addition the typical fees and expenses charged to a strategy will offset the strategy's trading profits. A description of the specific fee structure for each BlueBay strategy is contained in the strategy's prospectus.
- Risk statistics are annualised and calculated using weekly data points since inception. Risk statistics will be produced once there are 3 complete months of data available; for meaningful results, a minimum sample of 36 data points is recommended and where history is less than 3 years caution should be taken with the interpretation and representation of this data. Returns for periods less than 1 year have not been annualised in accordance with current industry standard reporting practices.
- Fundamental ESG risk rating is assigned at an issuer level by BlueBay. Categories range from 'very high' ESG risk rating to 'very low' ESG risk rating and is a function of the ESG risk profile of an issuer and how will it manages these risks.
- Investment ESG score is assigned at an issuer level by BlueBay unless otherwise stated (i.e. assigned at the security level). Scores range from '+3' through to '-3' and indicates the extent to which ESG is considered investment materials, as well as the nature and scale of the materiality impact (i.e. positive credit impact, negative credit impact, no credit impact).

The investments discussed may fluctuate in value and you may not get back the amount invested. The return may increase or decrease as a result of currency fluctuations. Investment in derivatives may involve a high degree of gearing or leverage, so that a relatively small movement in the price of the underlying investment results in a much larger movement in the price of the instrument, as a result of which prices are more volatile. There are restrictions on transferring interests in the funds. The instruments in which the products invest may involve complex tax structures and there may be delays in distributing important tax information. The funds are not required to provide periodic pricing or valuation information to investors with respect to its individual investments.

Unless otherwise stated, performance data is unaudited and net of management, performance and other fees. Past performance is not indicative of future results.

Any indices shown are presented only to allow for comparison of the RBC BlueBay fund's performance to that of certain widely recognised indices. The volatility of the indices may be materially different from the individual performance attained by a specific fund or investor. In addition, the RBC BlueBay fund holdings may differ significantly from the securities that comprise the indices shown. Indexes are unmanaged and investors cannot invest directly in an index.
