RISKS

The risk indicator assumes that you will hold the product for at least 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

Other important risks partly or completely unreflected in the risk indicator:

- · If your currency as an investor is different from the subscription currency of this product, changes in currency exchange rates could reduce any investment gains or increase any investment losses.
- Unusual market conditions or unforeseeable events may magnify risks or trigger other risks such as counterparty, liquidity and operational risks (a full description of these risks is available in the prospectus).
- If you place a request to sell (redeem) shares at a time when this product has received many other sell requests, the processing of your order may be delayed, which could affect the price you receive for your shares.

We refer to the prospectus and KID for more explanation and a complete overview of the risks.
