Risk and Reward Profile

Lower risk ← Higher risk
Typically lower rewards Typically higher rewards

- Historical data may not be reliable indication for the future.
- The risk category of a Fund is an indicator but not a target or a guarantee and may shift over time.
- The lowest category does not mean a risk-free investment.
- Why is the Fund in this specific category?
Convertible Bonds have both an equity market and interest rate market components. The risk/reward profile is in between the risk profile of those two markets.
- The higher the risk, the longer the recommended investment horizon.

Other risks materially relevant to the Fund which are not adequately captured by the indicator are described below:

- **Credit Risk:** This risk relates to the ability of an issuer to honour its commitments: downgrades of an issue or issuer rating may lead to a drop in the value of bonds in which the subfund has invested.
- **Liquidity Risk:** This risk arises from the difficulty of selling an asset at a fair market price and at a desired time due to lack of buyers.
- **Counterparty Risk:** This risk is associated with the ability of a counterparty in a financial transaction to fulfil its commitments like payment, delivery and reimbursement.
- **Derivatives Risk:** When investing in over the counter or listed derivatives, the Fund aims to hedge and/or to leverage the yield of its position. The attention of the investor is drawn to the fact that leverage increases the volatility of the subfund.

For more information on risks, please see the "Investment Risks" section of the Fund's prospectus, which is available at www.bnpparibas-ip.com.
