What is this product?

The Fund is a collective investment scheme (investment company), domiciled in Ireland and regulated by the Central Bank of Ireland.

Objective and Investment Strategy

To seek to achieve asset growth through investment in a well-diversified portfolio of securities of European issuers or of issuers established outside Europe which have a predominant proportion of their assets or business operations in Europe. It is not proposed to concentrate investments in any one industry or sector.

At least 80 per cent. of the securities in which the Fund will invest will comprise securities of companies which are constituents of the MSCI Europe Index which is a general index for pan-European equities covering 16 countries. The European countries in which the Fund may invest include the countries of the European Union, Norway and Switzerland. The securities will be listed, traded or dealt in on a regulated market.

The Fund may invest up to 10 per cent. of its net asset value in the securities of issuers established or having a significant proportion of their assets or business in Eastern European countries, such as Croatia, Albania, Serbia, Macedonia, Bosnia-Herzegovina and Turkey. As above, such securities will be listed, traded or dealt in on a regulated market in these countries.

The securities in which the Fund may invest shall include ordinary shares or common stock, American depository receipts (“ADRs”), global depository receipts (“GDRs”), preference shares and warrants, provided that investments in warrants shall not comprise more than 5 per cent. of the net asset value of the Fund.

The Fund is permitted to invest in or hold other types of instruments as part of its investment policy including, but not limited to, short term securities such as commercial paper, bankers’ acceptances, certificates of deposit and government securities issued by a member of the Organisation for Economic Co-operation and Development or by any supranational entity which are rated investment grade or better as well as collective investment schemes and REITs.

PRODUCT KEY FACTS

The Fund may invest in financial derivative instruments for hedging, efficient portfolio management and investment purposes. Derivatives will typically be used as a substitute for taking a position in the underlying asset and/or as part of a strategy designed to reduce exposure to other risks, such as currency risk. Currently, the Fund will not use financial derivative instruments extensively. The use of such financial derivative instruments will result in minimal leverage of up to 10 per cent. of the net asset value of the Fund under the commitment approach. While the Fund does not intend to employ any specific strategy in respect of the use of financial derivative instruments, such instruments may be used in accordance with the Fund's investment objective and policy.

What are the key risks?

Investment involves risks. Please refer to the Hong Kong Offering Document for details including the risk factors.

1. Investment risk

- There can be no assurance that the Fund will achieve its investment objective. The price of the shares may fall as well as rise.

2. Volatility risk

- Price of securities in which the Fund will invest may be volatile. During periods of uncertain market conditions, the combination of price volatility and illiquidity in the market may affect the Fund's ability to acquire or dispose of securities at the price and time it wishes to do so, and consequently may have an adverse impact on the investment performance of the Fund.

3. Concentration risk

- The Fund concentrates its investments in companies Europe and thus, may be subject to a greater degree of volatility and risk than a fund following a more diversified strategy. The Fund's investments may become more susceptible to fluctuations in value resulting from adverse economic or business conditions in the European markets, and thus the aggregate return of the Fund may be adversely affected.

4. Emerging market risk

- The Fund may invest in markets of a developing nature. Accordingly, these markets may be illiquid and levels of volatility in price movements may be greater than those experienced in more developed economies.
- The legal infrastructure and accounting, auditing and reporting standards in emerging markets may not provide the same degree of shareholder protection or information to investors as would generally apply internationally. In particular, valuation of assets, depreciation, exchange differences, deferred taxation, contingent liabilities and consolidation may be treated differently from international accounting standards.
- The value of the assets of the Fund may be affected by uncertainties, such as political developments, changes in government policies, taxation and currency repatriation and restrictions on foreign investment as well as under developed custodial/settlement systems in the markets where the Fund invests.

5. Derivatives risk

- The Fund may enter into transactions in over-the-counter markets that expose it to the credit risk of its counterparties and their ability to satisfy the terms of such contracts. In the event of the bankruptcy or insolvency of a counterparty, the Fund could experience delays in liquidating the position and may incur significant losses.
- Many derivative instruments have a leverage component, which means that adverse changes in the value or level of the underlying asset, rate or index can result in a loss substantially greater than the amount invested in the derivative itself.
- Liquidity risk exists when a particular derivative instrument is difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.
- Derivatives are designed to track the value of the securities, rates or indices. This tracking is not always perfect and as a result the Fund's use of derivatives may not always be an effective means of, and sometimes could be counterproductive to, the Fund's investment objective.

PRODUCT KEY FACTS

6. Eurozone Crisis - The Fund invests in instruments predominantly tied to Europe. As a result of the crisis of confidence in the European markets, measures have been or may be introduced to stabilise the markets. Notwithstanding this, the effect of the potential events in the Eurozone countries on the Fund is impossible to predict. 7. Currency risk - The Fund's investment in non-EUR denominated securities may cause the value of the Fund's investments to fluctuate with changes in exchange rates.	Is there any guarantee? The Fund does not have any guarantees. You may not get back the full amount of money you invest.
