## Objectives and Investment Policy

- ▶ iShares STOXX Europe 50 (DE) (hereinafter the “Fund”) is an exchange traded fund (ETF) that aims to track the performance of the STOXX® Europe 50 (Price Index) as closely as possible. In this regard, it aims to exactly and completely duplicate this index.
- ▶ The index tracks the 50 largest stocks in terms of market capitalisation from Europe’s developed economies. The market capitalisation is determined by multiplying the current share price with the total number of shares of a company.
- ▶ The Fund mostly invests in equities in order to achieve the investment objective.
- ▶ The proportion of assets in the Fund which matches the weighting of the underlying index (duplication percentage) is at least 95% of the Fund's assets.
- ▶ Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 5 years. Investment in the Fund is suitable for investors who have already gained experience with financial markets.
- ▶ The units in the Fund are distributing units. Income from the Fund’s investments will be paid out at least once a year as a dividend.
- ▶ The Fund units are denominated in Euro.
- ▶ The units are listed on one or more Stock Exchange(s). Investors can buy or sell their units daily during business hours through an intermediary on such Stock Exchange(s).

## Risk and Reward Profile

- ▶ This indicator is based on historical data and may not be a reliable indication of the risk profile of the Fund.
- ▶ The risk category shown is not guaranteed and may change over time.
- ▶ The lowest category does not mean risk free.
- ▶ The Fund is rated six due to the nature of its investments which include the risks listed below. These factors may impact the value of the Fund’s investments or expose the Fund to losses.
  - The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include

- political, economic news, company earnings and significant corporate events.
- ▶ Other particular risks:
  - Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
  - Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.
  - Currency Risk: The Fund invests in other currencies. Changes in exchange rates will therefore affect the value of the investment.

## Charges

The charges are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

\* Investors dealing on exchanges will pay fees charged by their stock brokers. Such charges are publicly available on the exchanges on which the units are listed and traded, or can be obtained from stock brokers.
