KEY RISKS ASSOCIATED WITH THIS FUND

- There is no guarantee that the Fund will achieve its objective.
- This Fund invests in international markets which means it is exposed to changes in currency rates which could affect the value of the Fund.
- The Fund may use derivatives to reduce costs and/or the overall risk of the Fund (i.e. Efficient Portfolio Management (EPM)). Derivatives involve a level of risk, however, for EPM, they should not increase the overall riskiness of the Fund.
- The Fund may invest in emerging markets. These markets have additional risks due to less developed market practices.
- A fall in the value of a single investment may have a significant impact on the value of the Fund because it typically invests in a limited number of investments.
- The Fund may invest in small companies which may be riskier and less liquid (i.e. harder to sell) than large companies. This means that their share prices may have greater fluctuations.
- The Fund takes its charges from the income of the Fund in the first instance. The impact of Fund charges may be material on the value of any income you receive from your investment. There is potential for capital erosion if insufficient income is generated by the Fund to cover these charges.
- Certain share classes are denominated in a different currency from the base currency (i.e. the reporting currency) of the Fund. Changes in the exchange rate between the share class currency and the base currency may affect the value of your investment.
- Certain share classes use techniques to try to reduce the effects of changes in the exchange rate between the share class currency and the base currency of the Fund. These techniques may not eliminate all the currency risk.
- A complete description of the risk factors is set out in the Prospectus in the section entitled "Risk Factors".
