RISKS

The risk indicator assumes that you will hold the product for at least 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

Investing in this product also entails risks that are materially relevant but not included in the risk indicator:

- Concentration risk: Since the sub-fund's portfolio mainly consists of debt securities issued and/or secured by EU-Member States, it is likely to be more specifically exposed to the economical development of this area.
- Credit risk: The risk that the creditworthiness of a bond or debt security issuer may deteriorate. It cannot be ruled out that part of the portfolio is rated below investment grade.
- Inflation risk: The sub-fund invests primarily in fixed income securities. A rise in inflation could cause the value of the assets in the portfolio to fall.
- Derivatives risk: derivatives held in the portfolio may be more volatile than the underlying instruments to which they relate, which may result in a decrease in the value of the portfolio.
- Sustainability risk: Environmental and/or social aspects are taken into consideration during the fund's investment selection process. Nevertheless, the risk of sustainability remains. As a result, the fund may have greater exposure to issuers that have a negative sustainability impact.

This product does not include any protection from future market performance so you could lose some or all of your investment.

We refer to the prospectus and KID for more explanation and a complete overview of the risks.
