### Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

- This Fund is categorized as a 7 because funds of this type have historically experienced high rises and falls in value. However, even the lowest

category does not mean "risk free". The risk category shown above is not guaranteed and may shift over time. Historical data may not be a reliable indication for the future.

- Currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- By focusing its investments in the United States, the fund will have greater exposure to the market, political and economic risks of that country than if it was more diversified across a number of countries.
- Shares of smaller companies may be more difficult to buy and sell than those of larger companies. This means that the Investment Manager may not be able to buy and sell at the best time or may suffer losses. This could reduce your returns.
- All the risks currently identified as being applicable to the Fund are detailed in the prospectus.
