# ECONOMIC SCALE US EQUITY

Monthly report 31 January 2024 | Share class AC

## Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of United States of America (USA) shares.

## Investment strategy

The Fund is actively managed and is not constrained by a benchmark. In normal market conditions, the Fund will invest at least 90% of its assets in shares (or securities similar to shares) of companies of any size that are based in, or carry out the larger part of their business activities in, the USA. The Fund's investment process identifies and invests in companies according to their economic scale, measured by their contribution to Gross National Product. This is also referred to as Value Added - the difference between a company's outputs and inputs. The Fund may invest up to 10% in Real Estate Investment Trusts, and may also invest up to 10% of its assets in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

## Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

## Monthly performance commentary

### Market Review

Global equities rose in January, driven by developed markets amid ongoing hopes of a soft landing as economic data prints held up. Meanwhile, EM equities were generally lower. In the US, equities posted gains with the S&P 500 hitting new highs, driven by tech stocks and related companies amid enthusiasm around the AI theme. Towards month-end, the Fed kept interest rates unchanged and hinted at a slower than expected speed of future rate cuts which weighed on investor sentiment.

### Fund Commentary

The HGIF Economic Scale US Equity fund delivered positive returns in January but underperformed the S&P 500 Net Total Return Index in the month. Although the fund does not have a benchmark, when comparing to the S&P 500 Index which serves as a proxy for the US equity market, both our asset allocation and stock selection weighed on performance.

In comparison with the S&P 500 Index, our underweight exposures to Real Estate and Utilities coupled with our overweight allocation to Financials contributed to performance. Conversely, our overweight allocations to Industrials and Consumer Discretionary coupled with our underweight exposure to Information Technology weighed on performance.

In terms of stock positions, our underweight exposures to Tesla Inc (Consumer Discretionary) and Apple Inc (Information Technology) coupled with our overweight allocation to Walmart Inc (Consumer Staples) contributed to performance. Conversely, our underweight exposures to Nvidia Corp (Information Technology), Microsoft Corp (Information Technology) and Meta Platforms Inc-Class A (Communication Services) weighed on performance.

Risk Disclosure

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.

The above table cites the last dividend paid within the last 12 months only. Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.

The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation:  $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n) - 1$ , n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12.

The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.

Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.
