FTGF Western Asset US Government Liquidity Fund Class A Distr. (D) (USD)

Investment risks

An investment in a money market fund does not offer any capital guarantee or protection, and as this is an investment in a fund it is different to a bank deposit, with particular reference that the amount invested in a money market fund can fluctuate and you may not get back the amount invested. The fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the Net Asset Value per unit or share.

The fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Money Market Instruments: There is a risk that issuers of money market instruments held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund.

Credit Rating: The credit rating of a money market instrument may be downgraded if the issuer is regarded as less likely to meet interest payments, meaning its value would fall and the fund may have to sell it. This could result in a loss to the fund.

Money market interest rates: The fund's income is based on short-term interest rates which can fluctuate significantly over short periods, which may affect the value of your shares.

Reverse Repurchase Agreements: The risk of investing in reverse repurchase agreements is that the seller of the securities fails to fulfil its commitment to repurchase the securities from the Fund in accordance with the terms of the agreement which may cause the Fund to incur a loss.

Liquidity: In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

Geographical focus: This fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other funds that invest in a broader range of regions.

Concentrated fund: The fund's investment approach may result in the fund being focused in one, or a small number of, countries, sectors or asset classes compared to other investment funds. This means that the fund may be more sensitive to economic, market, political or regulatory events than other funds that invests across a broader range of countries, sectors and asset classes.

Fund counterparties: The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Constant NAV class ("CNAV"): The aim is to maintain the price of your shares in the fund at USD 1.00 but this is not guaranteed and the price may rise or fall. Please see the prospectus and relevant supplement for further details and visit www.lmwamoneymarket.com to view NAV prices.

Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

A temporary negative cash position may be due to (1) unsettled trade activity (2) permitted purposes, such as borrowing or derivatives use, if allowed by the prospectus.

Definitions

Life: The average number of years for which each component of unpaid principal on a bond, loan or mortgage remains outstanding. The weighted average life calculation provides an aggregate figure that shows how many years it will take to pay off half the outstanding principal on a bond portfolio.

Effective duration: Average Duration equals the weighted average maturity of all the cash flows in the portfolio and gives an indication of the sensitivity of a portfolio's bond prices to a change in interest rates. The higher the duration, the more sensitive the portfolio is to interest rate changes. Effective Duration is a calculation for bonds with embedded options (Not every portfolio will purchase bonds with embedded options). It takes into account the expected change in cash flows caused by the option, as interest rates change. If a portfolio does not hold bonds with embedded options, then the Effective Duration will be equal to the Average Duration.

Credit quality breakdown: Nationally Recognised Statistical Rating Organisations (NRSROs) assess the likelihood of bond issuers defaulting on a bond's coupon and principal payments. The weighted average credit quality by Western Asset Management assigns each security the higher rating from three NRSROs (Standard & Poor's, Moody's Investor Services and Fitch Ratings, Ltd.). If only one NRSRO assigns a rating, that rating will be used. Securities that are not rated by all three NRSROs are reflected as such. The lower the overall credit rating, the riskier the portfolio. The credit rating is expressed as a regular letter rating (from high to low quality): AAA, AA, A, BBB, BB, ...D.

Important information
