Risk And Reward Profile

Lower risk

Potentially lower reward

Higher risk

Potentially higher reward

What does this risk indicator mean?

This synthetic risk and reward indicator (SRRI) scale rating indicates how the Portfolio may perform and the risk of losing some or all of your capital. Generally the potential for higher gains also means a larger risk of losses. The lowest category does not mean a risk free investment.

The above rating is an estimate, not a guarantee. It is calculated using industry-standard methods and is based on medium-term volatility (how sharply the Portfolio's actual or estimated share price has gone up and down over five years).

Historical data may not be a reliable indication of the future risk profile of this Portfolio. The risk and reward category for this Portfolio is not guaranteed to remain unchanged and may shift over time.

Why is this Portfolio in this category?

The Portfolio is not guaranteed in capital. The Portfolio is invested in both

equities and debt securities which are subject to variations up or down that can generate gains or losses.

Risks materially relevant to the Portfolio but not adequately captured by the SRRI:

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events, which could amplify everyday risks and could trigger other risks, such as:

Allocation risk: The Portfolio's allocation to various asset classes may change over time and this could impact the performance of the Portfolio positively or negatively.

Counterparty risk: If an entity with which the Portfolio does business becomes insolvent, payments owed to the Portfolio could be delayed, reduced and/or eliminated.

Liquidity risk: Certain securities could become hard to buy or to sell at a desired time or price.
