Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund’s ranking on the Risk and Reward Indicator.

- This Fund is categorized as a 6 because funds of this type have historically experienced high rises and falls in value. However, even the lowest category does not mean “risk free”. The risk category shown above is not guaranteed and may shift over time. Historical data may not be a reliable indication for the future.
- Currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk.
- All the risks currently identified as being applicable to the Fund are detailed in the prospectus.
